Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

M0220MD-202LDAR2

Vacuum Fluorescent Display Module

RoHS Compliant

1. SCOPE

This specification applies to VFD module M0220MD-202LDAR2.

2. FEATURES

2.1 Since a DC/DC converter is used, only+5Vdc power source is required to operate the module.

2.2 High quality blue-green(505 nm) vacuum fluorescent display provides an attractive and readable medium. Other colors can be achieved by simple wavelength filters.

2.3 Characters are provided with a 5*7 dot matrix.

3. GENERAL DESCRIPTIONS

3.1 This specification becomes effective after being approved by the purchaser.

3.2 When any conflict is found in the specification, appropriate action shall be taken upon agreement of both parties.

3.3 The expected necessary service parts should be arranged by the customer before the completion of production.

4. PRODUCT SPECIFICATIONS

4.1 Type

Table_1

TYPE	M0220MD-202LDAR2
Digit Format	5*7 Dot Matrix with Descriptor

4.2 Outer Dimensions, Weight (See Fig_4 on page 5/11 for details)

Table_2

Parameter		Specification	Unit
Outer Dimensions	Width	193.0±1.0	mm
	Height	64.0±1.0	mm
	Thickness	25.0 Max	mm
Weight		Typical 220	g

4.3 Specifications of the Display Panel (See Fig 5 on Page 7 of 12 for details)

Table_3

Parameter		Specification	Unit
Display Size (W*H)		146.1*29.0	mm
Number of Digit		20 Digits*2 Rows	--
Character Size (W*H)		5.5*10.5	mm
Character Pitch	Horizontal	7.4	mm
	Vertical	15.5	mm
Display Color		Blue-Green(505 nm)	

4.4 Environment Conditions

Table_4

Parameter	Symbol	Min.	Max.	Unit
Operating Temperature	Topr	-40	+85	℃
Storage Temperature	Tstg	-50	+95	℃
Humidity (Operating)	Hopr	0	85	%
Humidity(Non-operating)	Hstg	0	90	%
Vibration (10 ～ 55 Hz)	--	--	4	G
Shock	--	--	40	G

4.5 Absolute Maximum Ratings

Signal Interface

- Connector(Female): HIF3B-20D-2.54R (HIROSE) or equivalent
  → Mate Socket (Male)：BH-R20 FG (aster) or equivalent

Table_9

Pin No	Signal	Pin No	Signal
1	Vcc	2	Vcc
3	GND	4	GND
5	ANODE CLK	6	GND
7	GND	8	GND
9	GRID DATA	10	GND
11	CLEAR	12	GND
13	ANODE DATA	14	GND
15	LATCH CLK	16	GND
17	GND	18	GND
19	Vcc	20	Vcc

5、Function Descriptions

    The anode and grid data is clocked into the module using a synchronous serial interface. The refresh rate should be at least 60Hz (100Hz IS RECOMMANDED). The sequence That this data should be sent to the module is as follows:

> Clock in the anode data
> Clock in the grid data
> Latch the anode and grid data
> Disable the clear signal
> Enable the clear signal

    A minimum of 36 anode data bits should be sent to the module. The table below details the correlation between the anode bits clocked into the module and their Pixel position in the 5X7 characters. The 36^{TM} bits is unused in the upper row of characters and is the inverted triangel in the lower row. Additional bits can be clocked into the module if necessary. The module will only display the last 36 data bits. if, for example. 5 complete bytes of data are sent. the triangle will be the last bit of byte 5. and the first 4 bits of byte 1 will not be displayed.

1	2	3	4	5
6	7	8	9	10
11	12	13	14	15
16	17	18	19	20
21	22	23	24	25
26	27	28	29	30
31	32	33	34	35

    At any point in time only 1 grid should be active. this active bit can be propagated through the display by clocking in low GRID DATA bits for the other position. For example: send the anode data for character position 1. then clock in a high GRID DATA bit(using the LATCH CLK signal). To display a character at position 2, send the anode data then clck in a low GRID DATA bit. this can be continued to character position 40. The table below details the character position of the VFD.
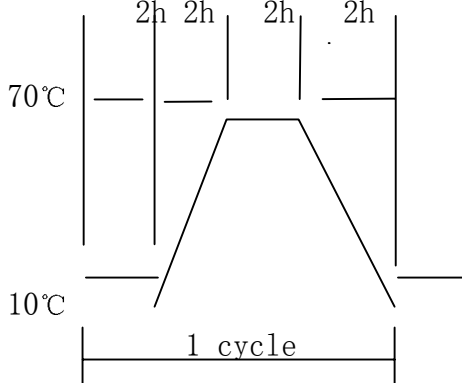

| 1ST	2ND		19TH	20TH
21ST	22ND		39TH	40TH

6、Operation Recommendations

  6.1 Avoid applying excessive shock or vibration beyond the specification for the VFD module.

  6.2 Since VFDs are made of glass material, careful handing is required, i.e. Direct impact with hard material to the glass surface (especially exhaust tip) may crack the glass.

  6.3 When mounting the VFD module to you system, leave a slight gap between the VFD glass and your front panel. The module shoud be mounted without stress to avoid flexing of the PCB.

  6.4 Avoid plugging or unplugging the interface connection with the power on , otherwise it may cause the severe damage to input circuitry.

  6.5 Slow starting power supply may cause non-operation because the chip mcu won't be reset.

  6.6 Exceeding any of maximum ratings may cause the permanent damage.

  6.7 Since the VFD modules contain high voltage source, careful handing is required while power is on

  6.8 When the power is turned off, the capacitor does not discharge immediately. So the high voltage applied to VFD must not get in contact with ICs. In other words, short-circuit of mounted component on PCB within 30 seconds after power-off may cause damage the module.

  6.9 The power supply must be capable of providing at least 3 times the rated current, because the surge current may be 3 times the specified current consumption when the power is turned on.

  6.10 Avoid using the module where excessive noise interference is expected. Noise may affects the interface signal and causes improper operation. And it is important to keep the length of the interface cable less than 50cm.

  6.11 Since all VFD modules contain C-MOS ICs, anti_static handling procedures are always required.

7、Reliability Condition

Item	Conditions	Criteria	Remarks
High Temp. (Storage)	Temperature: 85±2℃ Duration:72hrs In unlighted state.	Free of the Major Defects	Measurement shall be done after the specimens are kept at room temperature for 24 hrs.
High Temp. (Operation)	Temperature: 70±2℃ Duration:96hrs In unlighted state.		
Low Temp. (Storage)	Temperature: −40±3℃ Duration:72hrs In unlighted state.		
Low Temp. (Operation)	Temperature: −20±2℃ Duration:24hrs		
Temperature Cycling	 70℃ 2h 2h 2h 2h 10℃ 1 cycle Number of Repeating: 5 All Segments are lit.		
Humidity (steady state)	Humidity: 90~95% Temperature: 40±2℃ Duration:96hrs		
Vibration	Frequency: 10~55Hz Displacement: 1.5mm Direction: ±X, ±Y, ±Z Duration: 6hrs (2hrs for each direction) Condition: In unlighted state		

Item	Condition	Criteria	Remarks
Shock	G：40G　　　Time：10ms Wave：Half sine wave Direction：±X、±Y、±Z (3 times in each of the direction) Conditio：In unlighted State	Free of the Major Defects	Measurement shall be done after the specimens are kept at room temperature for 24 hrs.
Thermal Sock	1 cycle 30min 5min　　5min 30min Number of Repeating：5 Unlighted state.		

8. DESIGN CHANGE

8.1 Please inform Newhaven Display in the event of user modification or operation outside of indicated parameters governed by this specification.

8.2 Newhaven Display reserves the right to change or modify the design of the VFD module.
