DESCRIPTION

The M74HCT4051 is a single eight-channel analog MULTIPLEXER/DEMULITPLEXER fabricated with silicon gate C²MOS technology and it is pin to pin compatible with the equivalent metal gate CMOS4000B series.

It contains 8 bidirectional and digitally controlled analog switches.

ORDER CODES

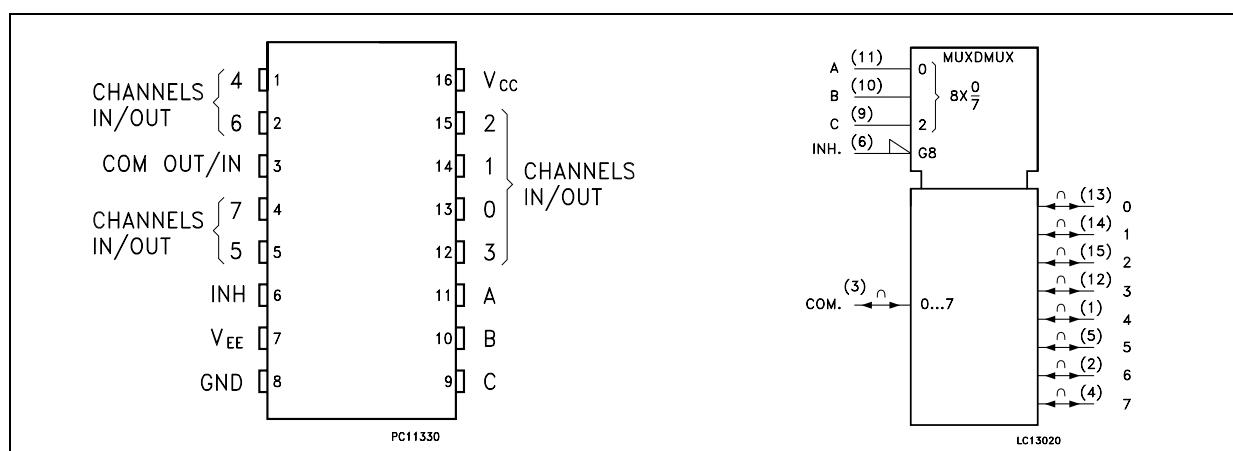

| PACKAGE | TUBE | T & R |
|---------|---------------|------------------|
| DIP | M74HCT4051B1R | |
| SOP | M74HCT4051M1R | M74HCT4051RM13TR |
| TSSOP | | M74HCT4051TTR |

A built-in level shifting is included to allow an input range up to $\pm 6V$ (peak) for an analog signal with digital control signal of 0 to 6V.

V_{EE} supply pin is provided for analog input signals. It has an inhibit (INH) input terminal to disable all the switches when high, compatible with TTL output level. For operation as a digital multiplexer/demultiplexer, VEE is connected to GND. A, B and C control inputs select one channel out of eight channels; they are compatible with TTL output level.

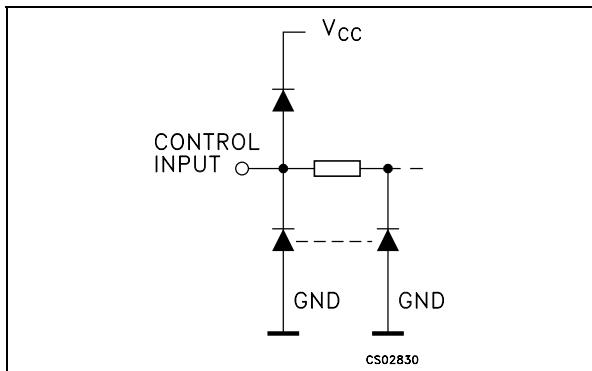

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
