## DESCRIPTION

The M74HCT4053 is a triple two-channel analog MULTIPLEXER/DEMULTIPLEXER fabricated with silicon gate $\mathrm{C}^{2}$ MOS technology and it is pin to pin compatible with the equivalent metal gate CMOS4000B series.
It contains 6 bidirectional and digitally controlled analog switches.

A built-in level shifting is included to allow an input range up to $\pm 6 \mathrm{~V}$ (peak) for an analog signal with digital control signal of 0 to 6 V .
$\mathrm{V}_{\mathrm{EE}}$ supply pin is provided for analog input signals. It has an inhibit (INH) input terminal to disable all the switches when high, compatible with TTL output level. For operation as a digital multiplexer/demultiplexer, VEE is connected to GND. A, B and C control inputs select one of a pair of channels, they are compatible with TTL output level.
All inputs are equipped with protection circuits against static discharge and transient excess voltage.
