# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Digital Attenuator, 6-Bit, 0.5 dB LSB step DC - 30 GHz

#### Features

- 6-bit, 0.5 dB LSB, 31.5 dB range
- DC to 30 GHz operation
- Integrated TTL 0/+5V control
- +/- 0.5 dB typical bit error
- Low RMS phase 4.3° @ 20 GHz
- Lead-Free 3 mm 16-lead PQFN package
- ESD protection for all controls and bias

#### Description

The MAAD-011021 is a wide band 6-bit digital attenuator covering DC to 30 GHz. The attenuation bit-values are 0.5 dB LSB (least significant bit), 1, 2, 4, 8, and 16 dB for a total attenuation of 31.5 dB. Attenuation error is typically less than +/- 0.5 dB, RMS phase error is less than 5 degrees at 20 GHz, and typical insertion loss is 7.2 dB at 15 GHz. Return loss is typically 12 dB across all frequencies and attenuation states.

The attenuator integrates an inverter to allow a single control for series/shunt attenuation. Inverter requires a -5 V supply (V<sub>CC</sub>) and 17 mA typical, logic is 0 V / +5 V.

The device is also available as bare die; order part number MAAD-011021-0GPDIE.

### Ordering Information<sup>1,2</sup>

Part Number	Package
MAAD-011021	Bulk Part
MAAD-011021-TR0500	500 piece reel
MAAD-011021-SMB	Sample Board

1. Reference Application Note M513 for reel size information.

2. All sample boards include 3 loose parts.

#### **Functional Schematic**

### Pin Configuration<sup>3</sup>

Pin No.	Function	Pin No.	Function	
1	Ground	9	V6 (16 dB)	
2	RF Input	10	Ground	
3	Ground	11	RF Output	
4	V1 (0.5 dB)	12	Ground	
5	V2 (1 dB)	13	No Connection	
6	V3 (2 dB)	14	No Connection	
7	V4 (4 dB)	15	$V_{\text{CC}}$ -5 V Bias	
8	V5 (8 dB)	16	No Connection	
		17	Pad⁴	

MACOM recommends connecting unused package pins to ground.

The exposed pad centered on the package bottom must be connected to RF, DC and thermal ground.

\* Restrictions on Hazardous Substances, European Union Directive 2011/65/EU.

#### Absolute Maximum Ratings<sup>5,6</sup>

Parameter	Absolute Maximum		
Input Power	+35 dBm		
Operating Voltage	-5 V		
Control Voltage	0 / +5 V		
Operating Temperature	-40°C to +85°C		
Storage Temperature	-65°C to +150°C		

5. Exceeding any one or combination of these limits may cause permanent damage to this device.

MACOM does not recommend sustained operation near these survivability limits.

#### Handling Procedures

Please observe the following precautions to avoid damage:

#### **Static Sensitivity**

Gallium Arsenide Integrated Circuits are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 1A devices.

## Lead-Free 3 mm 16-Lead PQFN<sup>†</sup>

<sup>†</sup> Reference Application Note S2083 for lead-free solder reflow recommendations. Meets JEDEC moisture sensitivity level 1 requirements. Plating is 100% matte tin over copper.

### **Application Information**

The MAAD-011021 is designed for extremely wide band and robust attenuation applications. It uses a combination of series and shunt cold channel, multiple-gate FETs to achieve high linearity and accurate attenuation repeatability. We recommend using double bonds at both RF input and output, as well as keeping bondwires as short as possible. This part is the most accurate for X-band applications.

The MAAD-011021 has a built in inverter function which allows a single +5 V / 0 V single control for each bit. This is useful if you require very fast switching times and have +5 V / 0 V available.

The MAAD-011021 is DC-coupled at both RF<sub>IN</sub> and RF<sub>OUT</sub>. If operation at DC is desired, 0  $\Omega$  jumpers (or continuous 50  $\Omega$  RF lines) should be used in series with RF<sub>IN</sub> and RF<sub>OUT</sub>. Customer should take extra care to ensure that the voltage at both RF<sub>IN</sub> and RF<sub>OUT</sub> are 0 V; excess voltage can damage the part. If operation at DC is not required, simply use series blocking capacitors.
