Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## High Power PIN Diode

## Features

- 3 Terminal LPF Broadband Shunt Structure
- $50 \mathrm{MHz}-12 \mathrm{GHz}$ Broadband Frequency
- >100 W Peak Power Handling
- $<0.1 \mathrm{~dB}$ Shunt Insertion Loss
- $>23 \mathrm{~dB}$ Shunt Isolation
- $<45^{\circ} \mathrm{C} / \mathrm{W}$ Thermal Resistance
- Lead-Free $1.5 \times 1.2 \mathrm{~mm} 6$-lead DFN Package
- RoHS* Compliant and $260^{\circ} \mathrm{C}$ Reflow

## Description

The MADP-011027 is a lead-free $1.5 \times 1.2 \mathrm{~mm}$ DFN surface mount plastic packaged that provides both low and high signal frequency operation from 50 MHz to 12 GHz . The higher breakdown voltage and lower thermal resistance of the PIN diode provides peak power handling in excess of 100 W .

This device is ideally suitable for usage in higher incident power switches, phase shifters, attenuators, and limiter microwave circuits over a broad frequency where higher performance surface mount diode assemblies are required.

## Ordering Information ${ }^{1,2}$

## Handling Procedures

Please observe the following precautions to avoid damage:

## Static Sensitivity

These devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these Class 2 devices.
9. Exceeding any one or combination of these limits may cause permanent damage to this device.
10. M/A-COM Technology Solutions does not recommend sustained operation near these survivability limits.
11. Operating at nominal conditions with $\mathrm{T}_{J} \leq+140^{\circ} \mathrm{C}$ will ensure MTTF > $1 \times 10 \mathrm{E} 6$ hours.

## Assembly Recommendations

Devices may be soldered using standard $\mathrm{Pb} 60 / \mathrm{Sn} 40$, or RoHS compliant solders. Leads are plated NiPdAuAg to ensure an optimum solderable connection.

For recommended $\mathrm{Sn} / \mathrm{Pb}$ and RoHS soldering profile See Application Note M538 on the MACOM website.

## Cleanliness and Storage

These devices should be handled and stored in a clean environment. Ends of the device are NiPdAuAg plated for greater solderability. Exposure to high humidity ( $>80 \%$ ) for extended periods may cause the surface to oxidize. Caution should be taken when storing devices for long periods.

## General Handling

Device can be handled with tweezers or vacuum pickups and are suitable for use with automatic pick-and-place equipment.
