HIGH EFFICIENCY RED (ORANGE) MAN8600 SERIES

DESCRIPTION

The MAN8600 Series is a family of large digits 0.8-inches in height. This series combines high brightness, large size, good aesthetics and is designed to be used where accurate readable displays need to be viewed over a distance. All models use right hand decimal points. Units are constructed with Grey face and neutral segment color.

FEATURES

- High performance nitrogen-doped GaAsP on GaP
- Large, easy to read, digits
- Common anode or common cathode models
- Fast switching — excellent for multiplexing
- Low power consumption
- Bold solid segments that are highly legible
- Solid state reliability — long operation life
- Rugged plastic construction
- Directly compatible with integrated circuits
- High brightness with high contrast
- Categorized for Luminous Intensity (See Note 6)
- Wide angle viewing ... 150°
- Low forward voltage
- Grey face for use in high ambient light conditions

APPLICATIONS

- For industrial and consumer applications such as:
- Digital readout displays
 - Instrument panels
 - Point of sale equipment
 - Digital clocks
 - TV and radios

MODEL NUMBERS

PART NUMBER	COLOR	DESCRIPTION	PACKAGE DRAWING
MAN8610	High Efficiency Red (Orange)	Common Anode; Right Hand Decimal	1
MAN8640	High Efficiency Red (Orange)	Common Cathode; Right Hand Decimal	1

RECOMMENDED FILTERS

For optimum ON and OFF contrast, one of the following filters or equivalents should be used over the display:

Panelgraphic Scarlet 65
Homalite 100-1670

In situations of high ambient light, contrast with the Grey face can be enhanced by using a neutral density filter. The following or an equivalent can be used:

Panelgraphic Grey 10

TYPICAL THERMAL CHARACTERISTICS

Thermal resistance junction to free air Φ_{JA}	160°C/W
Wavelength temperature coefficient (case temperature).	1.0Å/°C
Forward voltage temperature coefficient	—2.0 mV/°C

NOTES

1. The digit average Luminous Intensity is obtained by summing the Luminous Intensity of each segment and dividing by the total number of segments. Intensity will not vary more than ±33.3% between all segments within a digit.
2. The curve in Figure 3 is normalized to the brightness at 25°C to indicate the relative efficiency over the operating temperature range.
3. Leads of the device immersed to 1/16 inch from the body. Maximum device surface temperature is 140°C.
4. For flux removal, Freon TF, Freon TE, Isopropanol or water may be used up to their boiling points.
5. All displays are categorized for Luminous Intensity. The Intensity category is marked on each part as a suffix letter to the part number.
