

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# MAX15108 Evaluation Kit

## Evaluates: MAX15108

### General Description

The MAX15108 evaluation kit (EV kit) provides a proven design to evaluate the MAX15108 high-efficiency, 8A, step-down regulator with integrated switches in a 20-bump wafer-level package (WLP). The EV kit is preset for 1.5V output at load currents up to 8A from a 2.7V to 5.5V input supply. The device features a 1MHz fixed switching frequency, which allows the EV kit to achieve an all-ceramic capacitor design and fast transient responses.

### Features

- ◆ Operates from a 2.7V to 5.5V Input Supply
- ◆ All-Ceramic Capacitor Design
- ◆ 1MHz Switching Frequency
- ◆ Output Voltage Range
  - 0.6V Up to  $0.94 \times V_{IN}$  (Forced PWM)
  - 0.6V Up to  $0.85 \times V_{IN}$  (Skip Mode)
- ◆ Enable Input/Power-Good Output
- ◆ Selectable Skip-Mode Functionality
- ◆ Proven PCB Layout
- ◆ Fully Assembled and Tested

[Ordering Information](#) appears at end of data sheet.

### Component List

DESIGNATION	QTY	DESCRIPTION
C1, C2, C19	3	10 $\mu$ F $\pm$ 10%, 6.3V X5R ceramic capacitors (0603) Murata GRM188R60J106K TDK C1608X5R0J106K
C3, C4, C21	0	Not installed, ceramic capacitors (0603)
C5, C7, C8, C9	4	47 $\mu$ F $\pm$ 20%, 6.3V X5R ceramic capacitors (1206) Murata GRM31CR60J476M TDK C3216X5R0J476M
C6	1	2200pF $\pm$ 10%, 50V X7R ceramic capacitor (0603) Murata GRM188R71H222K TDK C1608X7R1H222K
C14	1	100pF $\pm$ 5%, 50V C0G ceramic capacitor (0603) Murata GRM1885C1H101J TDK C1608C0G1H101J
C15	1	4700pF $\pm$ 10%, 50V X7R ceramic capacitor (0603) Murata GRM188R71H472K TDK C1608X7R1H472K

**Note:** Indicate that you are using the MAX15108 when contacting these component suppliers.

### Quick Start

#### Recommended Equipment

- MAX15108 EV kit
- 5V, 5A DC power supply
- Load capable of sinking 8A
- Digital voltmeter

#### Procedure

The EV kit is fully assembled and tested. Follow the steps below to verify the board operation. **Caution: Do not turn on power supply until all connections are completed.**

- 1) Connect the positive terminal of the 5V supply to the IN PCB pad and the negative terminal to the nearest PGND PCB pad.
- 2) Connect the positive terminal of the 8A load to the OUT PCB pad and the negative terminal to the nearest PGND PCB pad.
- 3) Connect the digital voltmeter across the OUT PCB pad and the nearest PGND PCB pad.
- 4) Verify that a shunt is installed on jumper JU1.
- 5) Verify that a shunt is installed on pins 2-3 on jumper JU2.
- 6) Turn on the DC power supply.
- 7) Enable the load.
- 8) Verify that the voltmeter displays 1.5V.

### Detailed Description of Hardware

The MAX15108 EV kit provides a proven design to evaluate the MAX15108 high-efficiency, 8A, step-down regulator with integrated switches. The applications include distributed power systems, portable devices, and preregulators. The EV kit is preset for 1.5V output at load currents up to 8A from a 2.7V to 5.5V input supply. The device features a 1MHz fixed switching frequency, which allows the EV kit to achieve an all-ceramic capacitor design and fast transient responses. A placeholder for an input aluminum electrolytic capacitor (C22) is provided to damp the input if long wires are used; they are not required in a tight system design.

#### Soft-Start (SS)

The device utilizes an adjustable soft-start function to limit inrush current during startup. The soft-start time is adjusted by the value of C16, the external capacitor from SS to GND. By default, C16 is currently 0.033 $\mu$ F, which gives a soft-start time of approximately 2ms. To adjust the soft-start time, determine C16 using the following formula:

$$C16 = (10\mu A \times t_{SS})/0.6V$$

where  $t_{SS}$  is the required soft-start time in seconds and C16 is in farads.

An external tracking reference with steady-state value between 0 and  $V_{IN} - 2V$  can be applied to SS. Refer to the *Programmable Soft-Start (SS)* section in the MAX15108 IC data sheet for a more detailed description.

## Evaluates: MAX15108

### Setting the Output Voltage

The EV kit can be adjusted from 0.6V up to  $0.94 \times V_{IN}$  (forced PWM) by changing the values of resistors R1 and R2. To determine the value of the resistor-divider, first select R2 between 1k $\Omega$  and 20k $\Omega$ . Then use the following equation to calculate R1:

$$R1 = R2 [(V_{OUT}/V_{FB}) - 1]$$

where  $V_{FB}$  is the feedback threshold voltage ( $V_{FB} = 0.6V$ ) and  $V_{OUT}$  is the desired output. When regulating for an output of 0.6V in skip mode, set R1 to 0 $\Omega$  and keep R2 connected from FB to ground.

When R1 is changed, compensation components C14, R3, and C15 must be changed to ensure loop stability. Refer to the *Compensation Design Guidelines* section in the MAX15108 IC data sheet.

**Table 1. Regulator Enable (EN) Jumper JU1 Description**

SHUNT POSITION	EN PIN	DEVICE OUTPUT
Installed*	Connected to IN	Enabled
Not installed	Pulled to PGND through R4	Disabled

\*Default position.

### Regulator Enable (EN)

The device features a regulator enable input. For normal operation, a shunt should be installed on jumper JU1. To disable the output, remove the shunt on JU1 and the EN pin will be pulled to PGND through resistor R4. See Table 1 for JU1 settings.

### Skip-Mode Input (SKIP)

The device offers selectable skip-mode functionality to reduce current consumption and achieve a higher efficiency at light loads. To operate in skip mode, install a shunt on pins 1-2 on jumper JU2. See Table 2 for JU2 settings.

**Caution: Do not change the setting of the skip jumper while the device is operating.**

**Table 2. Skip-Mode Input (SKIP) Jumper JU2 Description**

SHUNT POSITION	SKIP PIN	MODE
1-2	Connected to EN	Skip-mode operation
2-3*	Connected to PGND	Forced-PWM operation

\*Default position.
