

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

High-Voltage, 350mA, Adjustable Linear High-Brightness LED (HB LED) Driver

General Description

The MAX16800 current regulator operates from a 6.5V to 40V input voltage range and delivers up to a total of 350mA to one or more strings of high-brightness LEDs. The output current of the MAX16800 is adjusted by using an external current-sense resistor in series with the LEDs. An enable input allows wide-range “pulsed” dimming. Wave-shaping circuitry reduces EMI. The differential current-sense input increases noise immunity. The MAX16800 is well suited for applications requiring high-voltage input and is able to withstand automotive load-dump events up to 40V. An on-board pass element minimizes external components while providing $\pm 3.5\%$ output current accuracy. Additional features include a 5V regulated output and short-circuit and thermal protection.

The MAX16800 is available in a thermally enhanced, 5mm x 5mm, 16-pin TQFN package and is specified over the automotive -40°C to $+125^{\circ}\text{C}$ temperature range.

Applications

Automotive Interior: Map, Courtesy, and Cluster Lighting
 Automotive Exterior: Tail Lights and CHMSL
 Warning Lights for Emergency Vehicles
 Navigation and Marine Indicators
 General Illumination
 Signage, Gasoline Canopies, Beacons

Pin Configuration

Features

- ◆ +6.5V to +40V Operating Range
- ◆ Adjustable Level (35mA to 350mA)
- ◆ $\pm 3.5\%$ Output Current Accuracy
- ◆ Integrated Pass Element with Low-Dropout Voltage (0.5V typ)
- ◆ Output Short-Circuit Protection
- ◆ +5V Regulated Output with 4mA Source Capability
- ◆ Thermal Shutdown
- ◆ Differential LED Current Sense
- ◆ High-Voltage Enable Pin for Dimming Interface
- ◆ Low Shutdown Supply Current (12 μA typ)
- ◆ Low 204mV Current-Sense Reference Reduces Power Losses
- ◆ Wave-Shaped Soft Edges Reduce Radiated EMI During PWM Dimming
- ◆ Available in Small, Thermally Enhanced, 5mm x 5mm, 16-Pin TQFN Package
- ◆ -40°C to $+125^{\circ}\text{C}$ Operating Temperature Range

Ordering Information

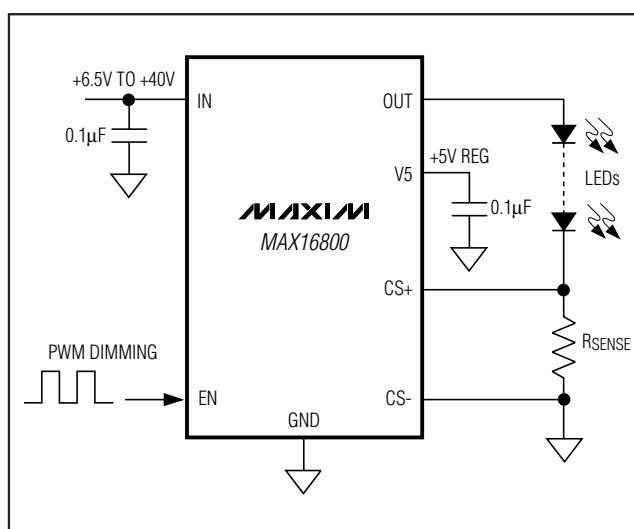

PART	TEMP RANGE	PIN-PACKAGE
MAX16800ATE+	-40°C to $+125^{\circ}\text{C}$	16 TQFN-EP*
MAX16800ATE/V+	-40°C to $+125^{\circ}\text{C}$	16 TQFN-EP*

+ Denotes a lead(Pb)-free/RoHS-compliant package.

*EP = Exposed paddle.

/V denotes an automotive qualified part.

Simplified Diagram

ABSOLUTE MAXIMUM RATINGS

IN, OUT, and EN to GND.....-0.3V to +45V
 CS+, V5 to GND-0.3V to +6V
 CS- to GND.....-0.3V to +0.3V
 OUT Short Circuited to GND Duration
 (at $V_{IN} = +16V$)60 minutes
 Maximum Current Into Any Pin (except V_{IN} and OUT) $\pm 20mA$

Continuous Power Dissipation ($T_A = +70^\circ C$)
 16-Pin TQFN 5mm x 5mm
 (derate 33.3mW/ $^\circ C$ above $+70^\circ C$).....2666.7mW
 Operating Junction Temperature Range..... $-40^\circ C$ to $+125^\circ C$
 Junction Temperature..... $+150^\circ C$
 Storage Temperature Range..... $-65^\circ C$ to $+150^\circ C$
 Lead Temperature (soldering, 10s)..... $+300^\circ C$

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

($V_{IN} = +12V$, $EN = V_{IN}$, $C_{V5} = 0.1\mu F$ to GND, $I_{V5} = 0$, $CS- = GND$, connect $R_{SENSE} = 0.58\Omega$ between $CS+$ and $CS-$. Connect OUT to $CS+$ (Note 1). $T_J = -40^\circ C$ to $+125^\circ C$, unless otherwise noted. Typical values are at $T_A = +25^\circ C$.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
Supply Voltage Range	V_{IN}	(Note 1)	6.5		40.0	V
Ground Current	I_G	$I_{LOAD} = 350mA$		1.4	3	mA
Shutdown Supply Current	I_{SHDN}	$V_{EN} \leq 0.6V$		12	40	μA
Guaranteed Output Current	I_{OUT}	$R_{SENSE} = 0.55\Omega$	350			mA
Output Current Accuracy		$35mA < I_{OUT} < 350mA$		± 3.5		%
Dropout Voltage (Note 3)	ΔV_{DO}	$I_{OUT} = 350mA$ (current pulsed), $12V < V_{IN} < 40V$		0.5	1.2	V
		$I_{OUT} = 350mA$ (current pulsed), $6.5V < V_{IN} < 40V$		0.5	1.5	V
Output Current Slew Rate		Current rising		5.4		mA/ μs
		Current falling		90		
Short-Circuit Current		$V_{OUT} = 0V$, $V_{IN} = 12V$	400	600	800	mA
LOGIC INPUT						
EN Input Current	I_{EN}				100	nA
EN Input Voltage High	V_{IH}				2.8	V
EN Input Voltage Low	V_{IL}		0.6			V
Turn-On Time	t_{ON}	EN rising edge to 90% of OUT		135	350	μs
CURRENT SENSE (Note 4)						
Regulated R_{SENSE} Voltage	V_{RSNS}	$V_{SENSE} = V_{CS+} - V_{CS-}$	197	204	211	mV
Input Current ($CS+$)		$V_{CS+} = 220mV$	-14			μA
Input Current ($CS-$)		$V_{CS+} = 220mV$			+84	μA

High-Voltage, 350mA, Adjustable Linear High-Brightness LED (HB LED) Driver

ELECTRICAL CHARACTERISTICS (continued)

($V_{IN} = +12V$, $EN = V_{IN}$, $C_{V5} = 0.1\mu F$ to GND, $I_{V5} = 0$, $CS^- = GND$, connect $R_{SENSE} = 0.58\Omega$ between CS^+ and CS^- . Connect OUT to CS^+ (Note 1). $T_J = -40^\circ C$ to $+125^\circ C$, unless otherwise noted. Typical values are at $T_A = +25^\circ C$.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
THERMAL OVERLOAD						
Thermal-Shutdown Temperature				+155		$^\circ C$
Thermal-Shutdown Hysteresis				23		$^\circ C$
+5V REGULATOR						
Output Voltage Regulation	V5		5.0	5.27	5.5	V
Output Voltage Change	$\Delta V5$	$0 < I_{LOAD} < 4mA$ (Note 5)		15	60	Ω
V5 Short-Circuit Current		$V5 = 0V$ (Note 6)		30		mA

Note 1: Resistors were added from OUT to CS^+ to aid with the power dissipation during testing.

Note 2: All devices 100% production tested at $T_A = +25^\circ C$. Limits over the operating temperature range are guaranteed by design.

Note 3: Dropout is measured as follows:

Connect $R_O = 27\Omega$ from OUT to CS^+ . Connect $R_{SENSE} = 0.58\Omega$ from CS^+ to CS^- . Set $V_{IN} = +12V$ (record V_{OUT} as V_{OUT1}). Reduce V_{IN} until $V_{OUT} = 0.97 \times V_{OUT1}$ (record as V_{IN2} and V_{OUT2}). $\Delta V_{DO} = V_{IN2} - V_{OUT2}$.

Note 4: $I_{V5} = 0mA$.

Note 5: Current regulation varies with V5 load (see the *Typical Operating Characteristics*).

Note 6: Thermal shutdown does not function if the output of the 5V reference is shorted to ground.

Typical Operating Characteristics

MAX16800

Pin Description

PIN	NAME	FUNCTION
1, 16	OUT	Current-Regulated Output. Connect pin 1 to pin 16.
2, 3	IN	Positive Input Supply. Bypass IN with a 0.1 μ F (min) capacitor to GND. Connect pin 2 to pin 3.
4–8, 13, 14	N.C.	Not Internally Connected
9	CS+	Positive Input of the Internal Differential Amplifier. Connect the current-sense resistor between CS+ and CS- to program the output current level.
10	CS-	Negative Input of the Internal Differential Amplifier. Connect the current-sense resistor between CS- and CS+ to program the output current level.
11	V5	+5V Regulated Output. Connect a 0.1 μ F capacitor from V5 to GND.
12	GND	Ground
15	EN	Enable Input. Drive EN high to enable the output.
—	EP	Exposed Pad. Connect to the ground plane for effective power dissipation. Do not use as the only ground connection.

Functional Diagram

Detailed Description

The MAX16800 is a high-current regulator capable of providing up to a total of 350mA of current to one or more strings of high-brightness LEDs. A wide operating input voltage range of +6.5V to +40V makes the MAX16800 ideal for automotive applications. A +5V regulated output provides up to 4mA of current to power external circuitry. In addition, the MAX16800 fea-

tures thermal and output short-circuit protection. The wide operating voltage range helps protect the MAX16800 against large transients such as those found in load-dump situations up to 40V.

The MAX16800 uses a feedback loop to control the output current. The differential voltage across the sense resistor is compared to a fixed reference voltage, and the error is amplified to serve as the drive to the internal

High-Voltage, 350mA, Adjustable Linear High-Brightness LED (HB LED) Driver

power series pass device (see the *Functional Diagram*). The regulation point is factory set at $(V_{CS+} - V_{CS-}) = 204\text{mV} \pm 3.5\%$. The regulated current is user defined by the value of R_{SENSE} .

The MAX16800 is a current controller internally optimized for driving the impedance range expected from one or more HB LEDs.

+5V Regulator

The MAX16800 includes a fixed +5V output regulator that delivers up to 4mA of load current for low-power applications throughout the +6.5V to +40V input voltage range. Connect a 0.1 μF compensation capacitor from V5 to ground. Shorting V5 to ground disables the thermal shutdown.

Thermal Protection

The MAX16800 enters a thermal-shutdown mode in the event of overheating. This typically occurs in overload or output short-circuit conditions. When the junction temperature exceeds $T_J = +155^\circ\text{C}$ (typ), the internal thermal-protection circuitry turns off the series pass device. The MAX16800 recovers from thermal-shutdown mode once the junction temperature drops by 23°C (typ). The part will therefore protect itself by thermally cycling in the event of a short-circuit or overload condition.

Applications Information

Programming the LED Current

The MAX16800 uses a sense resistor across $CS+$ and $CS-$ to set the LED current. The differential sense ampli-

fier connected across R_{SENSE} provides ground-loop immunity and low-frequency noise rejection. The LED current is given by the equation below:

$$I_{LED} = V_{SENSE} / R_{SENSE}$$

Input Voltage Considerations

For proper operation, the minimum input voltage must always be +1.2V (+1.5V for $V_{IN} < +12\text{V}$) higher than the worst-case sum of all the forward drops of all series-connected LEDs to the output of the MAX16800. The minimum operating voltage of the device is +6.5V. The device will operate below +6.5V; however, output current may not meet the full regulation specification (see the *Typical Operating Characteristics*).

Low-Frequency PWM at the Output

The MAX16800 provides pulsed or chopped current dimming. Generally, high-brightness LEDs are binned to match at their full-rated current; however, LEDs from the same bin exhibit poor matching at currents other than full-rated current. To achieve uniformity, HB LED manufacturers recommend PWM pulsing of the LED current at their full-rated value. There are two methods for producing a PWM output. One method is by pulsing the enable input (EN) while having a constant voltage at IN. The other method is to connect EN to IN and pulse both EN and IN. Both methods generate a regulated-amplitude PWM current (variable duty cycle) that can provide control over the LED brightness (see Figures 1 and 2).
