

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### **General Description**

The MAX3620 series is a family of high-performance passive delay lines for use in QDR/QDRII synchronous memory systems. These delay lines support high-speed transceiver logic (HSTL) source terminated transmission with an unterminated load at the receiver, and deliver accurate delays of 0.75ns, 1.00ns, 1.25ns, and 1.50ns for the generation of the quarter clock phase. The MAX3620 is offered in a small 3mm x 3mm package which contains two delay lines of equal length that can be driven either differentially or single-endedly.

## **Applications**

QDR/QDRII Memory Systems Multiphase Clock Generation

## **Pin Configuration**

#### **Features**

- **♦ Supports HSTL Source Terminated Lines**
- **♦ All-Passive Design**
- ♦ Compatible with 100 $\Omega$  Differential and 50 $\Omega$  Single-**Ended Transmission Lines**
- ♦ Small 3mm x 3mm Package

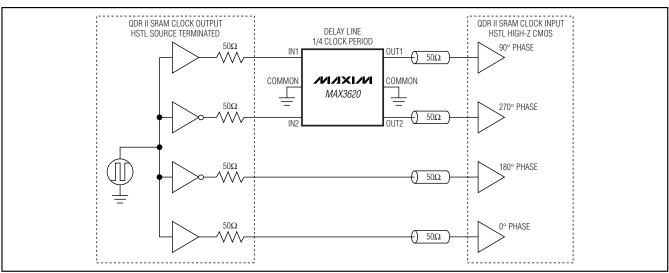

### **Ordering Information**

PART	TEMP RANGE	PIN-PACKAGE
MAX3620AETT	-40°C to +85°C	6 TDFN
MAX3620BETT	-40°C to +85°C	6 TDFN
MAX3620CETT	-40°C to +85°C	6 TDFN
MAX3620DETT	-40°C to +85°C	6 TDFN

#### **Selector Guide**

PART	PKG CODE	TOP MARK		
MAX3620AETT	T633-2	AJX		
MAX3620BETT	T633-2	AIY		
MAX3620CETT	T633-2	AIZ		
MAX3620DETT	T633-2	AJA		

## Typical Application Circuit

NIXIN

Maxim Integrated Products 1

#### **ABSOLUTE MAXIMUM RATINGS**

Maximum DC Voltage between COMMON and IOs	Operating Temperature Range45°C to +85°C
(IN1, IN2, OUT1, OUT2)±2.0V	Storage Temperature Range55°C to +150°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## **ELECTRICAL CHARACTERISTICS**

(Typical ambient temperature is +25°C. See Table 1 for more information.)

PARAMETER	SYMBOL	CONDITIO	MIN	TYP	MAX	UNITS		
Characteristic Impedance	Z <sub>0</sub>	See Table 1 clock frequen		50		Ω		
			MAX3620A	0.65	0.75	0.85		
		ZLOAD = ZSOURCE	MAX3620B	0.90	1.00	1.10	Ī

\_\_ /N/1XI/N

## **ELECTRICAL CHARACTERISTICS (continued)**

(Typical ambient temperature is +25°C. See Table 1 for more information.)

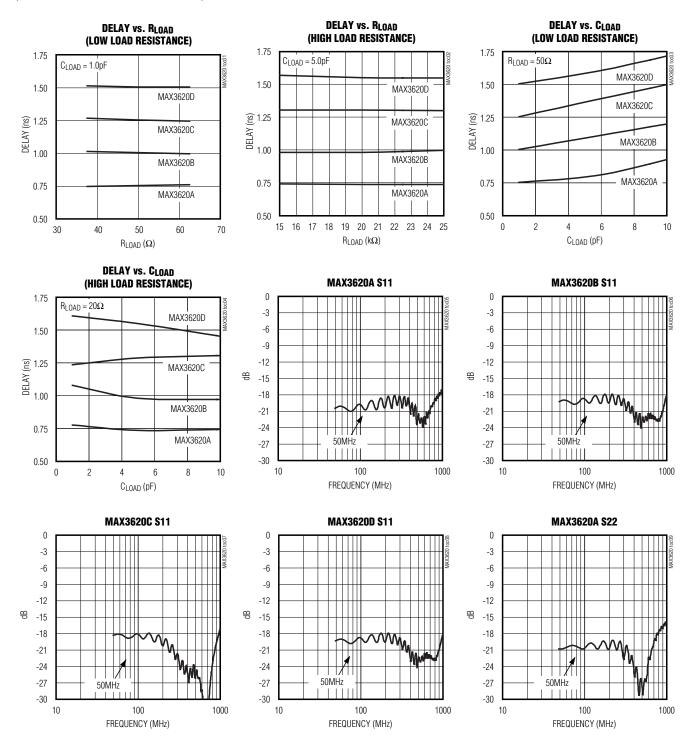

- **Note 1:** Load and source resistance =  $50\Omega \pm 1\%$ , capacitance  $\leq 1$ pF. Input transition time (20% to 80%) = 300ps.
- Note 2: The clock frequency is the maximum operational clock frequency listed in Table 1.
- **Note 3:** Load and source resistance =  $50\Omega \pm 1\%$ , capacitance  $\leq 1$ pF.
- Note 4: Insertion loss is relative to a lossless  $50\Omega$  transmission line. Ideally, an insertion loss of 0dB will result in 0.5 times the open-circuit transmitter output.
- Note 5: Source termination only (no-load termination), 5pF and 20kΩ at load, 300ps input transition time (20% to 80%). Load capacitance dominates performance.
- Note 6: Insertion loss is relative to an ideal open  $20k\Omega$  load. Ideally, an insertion loss of 0dB will result in 0.998 times the open-circuit transmitter output.

### **Table 1. Recommended Operating Conditions**

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
Operating Ambient Temperature		-40	+25	+85	°C
Recommended Load Capacitance	$Z_{LOAD} >> 50\Omega$ , source termination only		5		рF
Recommended Load Resistance	$Z_{LOAD} >> 50\Omega$ , source termination only		20		kΩ
	MAX3620A	250		333	
Clock Fraguency	MAX3620B	190		250	MHz
Clock Frequency	MAX3620C	150		200	IVIDZ
	MAX3620D	125		167	
Input Amplitude				1.5	V <sub>P-P</sub>
Input Voltage Range		-1.5		+1.5	V

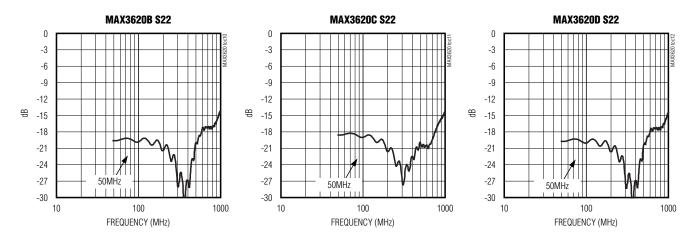

## **Typical Operating Characteristics**

 $(T_A = +25^{\circ}C, \text{ unless otherwise noted.})$ 

## Typical Operating Characteristics (continued)

5	COMMON	Common			
6	OUT1	Single-Ended Output 1			
_	Exposed Pad	Connect to same potential as COMMON			

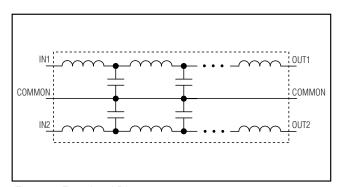

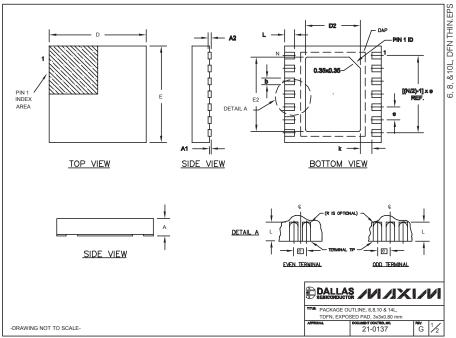

Figure 1. Functional Diagram

## Detailed Description

The MAX3620 delay lines are transmission lines constructed with a series of L-C sections. Figure 1 is a functional diagram of the MAX3620. The distributed architecture of the MAX3620 allows for symmetrical impedance looking into each terminal. When the MAX3620 is used in single-ended operation, leave unused input/output open.

## **Package Information**

(The package drawing(s) in this data sheet may not reflect the most current specifications. For the latest package outline information, go to <a href="https://www.maxim-ic.com/packages">www.maxim-ic.com/packages</a>.)
