

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Ultra-Low Power Op Amp in a Tiny 6-Bump WLP

MAX44264

### General Description

The MAX44264 is an ultra-small (6-bump WLP) op amp that draws only 750nA of supply current. It operates from a single +1.8V to +5.5V supply and features ground-sensing inputs and rail-to-rail output. The ultra-low supply current, low-operating voltage, and rail-to-rail output capabilities make these operational amplifiers ideal for use in single lithium ion (Li+), or two-cell NiCd or alkaline battery systems. The rail-to-rail output stage of the MAX44264 is capable of driving the output voltage to within 4mV of the rail with a 100k $\Omega$  load, and can sink and source 11mA with a +5V supply. The IC is unity-gain stable and available in a space-saving 0.9mm x 1.3mm, 6-bump WLP package.

### Applications

Cell Phones  
Tablet/Notebook Computers  
Mobile Accessories  
Battery-Powered Devices

### Features

- ◆ Ultra-Low 750nA Supply Current per Amplifier
- ◆ Ultra-Low +1.8V Supply Voltage Operation
- ◆ Ground-Sensing Input Common-Mode Range
- ◆ Outputs Swing Rail-to-Rail
- ◆ Outputs Source and Sink 11mA of Load Current
- ◆ No Phase Reversal for Overdriven Inputs
- ◆ High 120dB Open-Loop Voltage Gain
- ◆ Low 500 $\mu$ V Input Offset Voltage
- ◆ 9kHz Gain-Bandwidth Product
- ◆ 250pF (min) Capacitive Load Capability
- ◆ Available in a Tiny, 0.9mm x 1.3mm, 6-Bump WLP Package

### Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	TOP MARK
MAX44264EWT+	-40°C to +85°C	6 WLP	+CB

+Denotes a lead(Pb)-free/RoHS-compliant package.

## ABSOLUTE MAXIMUM RATINGS

V<sub>DD</sub> to V<sub>SS</sub> .....-0.3V to +6V  
 IN<sub>+</sub> or IN<sub>-</sub>.....(V<sub>SS</sub> - 0.3V) to (V<sub>DD</sub> + 0.3V)  
 OUT<sub>-</sub> Shorted to V<sub>SS</sub> or V<sub>DD</sub>.....Continuous  
 Continuous Power Dissipation (T<sub>A</sub> = +70°C)  
 6-Bump WLP (derate 10.5mW/°C above +70°C) .....840mW

Operating Temperature Range ..... -40°C to +85°C  
 Junction Temperature ..... +150°C  
 Storage Temperature Range .....-65°C to +150°C  
 Lead Temperature (soldering, 10s) .....+300°C  
 Soldering Temperature (reflow) .....+260°C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ELECTRICAL CHARACTERISTICS

(V<sub>DD</sub> = +5V, V<sub>SS</sub> = 0V, V<sub>CM</sub> = 0V, V<sub>OUT</sub> = V<sub>DD</sub>/2, R<sub>L</sub> = ∞ to V<sub>DD</sub>/2, T<sub>A</sub> = +25°C, unless otherwise noted.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS	
Supply Voltage Range	V <sub>DD</sub>	Guaranteed by PSRR tests	1.8		5.5	V	
Supply Current (per Amplifier)	I <sub>DD</sub>	V <sub>DD</sub> = +1.8V		0.6		μA	
		V <sub>DD</sub> = +5.0V		0.75	1.2		
Input Offset Voltage	V <sub>OS</sub>			±0.5	±7.0	mV

## Pin Configuration

## Pin Description

PIN	NAME	FUNCTION
A1	IN+	Noninverting Amplifier Input
A2	V <sub>SS</sub>	Negative Power-Supply Voltage
B1	IN-	Inverting Amplifier Input
B2	V <sub>DD</sub>	Positive Power-Supply Voltage
C1	OUT	Amplifier Output
C2	N.C.	No Connection. Not internally connected.

## Applications Information

### Ground Sensing

The common-mode input range of the MAX44264 extends down to ground, and offers excellent common-mode rejection. These devices are guaranteed not to undergo phase reversal when the input is overdriven.

### Power Supplies and Layout

The IC operates from a single +1.8V to +5.5V power supply. Bypass power supplies with a 0.1μF ceramic capacitor placed close to the V<sub>DD</sub> pin.

Ground layout improves performance by decreasing the amount of stray capacitance and noise at the op amp's inputs and outputs. To decrease stray capacitance, minimize PCB lengths and resistor leads, and place external components close to the op amps' pins.

### Bandwidth

The IC is internally compensated for unity-gain stability and has a typical gain-bandwidth of 9kHz.

### Stability

The IC maintains stability in their minimum gain configuration while driving capacitive loads. Although this product family is primarily designed for low-frequency

applications, good layout is extremely important because low-power requirements demand high-impedance circuits. The layout should also minimize stray capacitance at the amplifier inputs. However some stray capacitance may be unavoidable, and it may be necessary to add a 2pF to 10pF capacitor across the feedback resistor as shown in Figure 1. Select the smallest capacitor value that ensures stability.

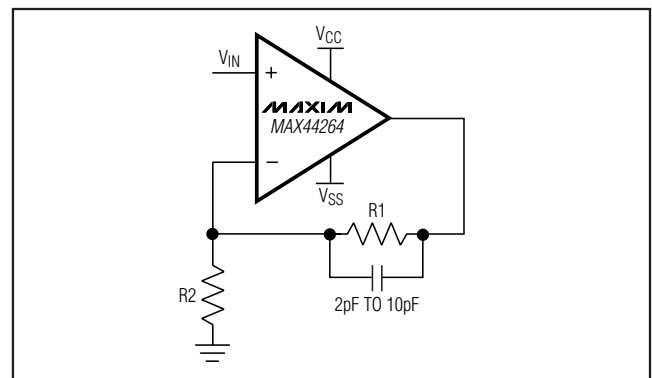

Figure 1. Compensation for Feedback Node Capacitance
