## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

#### Abstract

General Description The MAX4989 is a bidirectional 2-of-4 USB 2.0 crosspoint switch. The MAX4989 features the low on-capacitance and low on-resistance necessary to switch USB 2.0 low-/full-/Hi-Speed signals at data rates up to 480 Mbps . This device allows any 2-of-4 USB pairs to be connected together and is configured through a simple 3-input control logic interface. The MAX4989 operates from a single +2.7 V to +5.5 V supply and features an internal charge pump to permit full rail-to-rail swing. This device also features a highimpedance shutdown mode to reduce supply current to 100nA (typ). The MAX4989 is available in a 14 -pin, $3 \mathrm{~mm} \times 3 \mathrm{~mm}$ TDFN package and operates over the extended $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ temperature range.

## Applications

Notebook Computers
Cell Phones

| Features |
| :--- |
| Single +2.7 V to +5.5 V Supply Voltage |
| - Low $1 \mu \mathrm{~A}$ (typ) Supply Current |
| - 3 dB Bandwidth: 1 GHz (typ) |
| Low $5 \Omega$ (typ) RoN |
| - High-Impedance Shutdown Mode |

- Logic Inputs Control Signal Routing
- +1.8V CMOS-Logic Compatible
- Ultra-Small 14-Pin, 3mm x 3mm, TDFN Package

Peak Current $W_{-}, X_{-}, \bar{Y}_{-}, \vec{Z}_{-}$
(pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle) ............................ $\pm 240 \mathrm{~mA}$
Continuous Power Dissipation ( $\mathrm{T}_{\mathrm{A}}=+70^{\circ} \mathrm{C}$ )
14-Pin TDFN (derate $24.4 \mathrm{~mW} /{ }^{\circ} \mathrm{C}$ above $+70^{\circ} \mathrm{C}$ )
..... 1951mW
Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a 4-layer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

Pin Descriptions

| PIN | NAME | FUNCTION |
| :---: | :---: | :--- |
| 1 | Y- | Inverting Input/Output of Terminal Y |
| 2 | Y+ | Noninverting Input/Output of Terminal Y |
| 3 | GND | Ground |
| 4 | Z+ | Noninverting Input/Output of Terminal Z |
| 5 | Z- | Inverting Input/Output of Terminal Z |
| 6 | C0 | Control Input 0 |
| 7 | C1 | Control Input 1 |
| 8 | C2 | Control Input 2 |
| 9 | VCC | Positive Supply Voltage Input. Bypass $V_{C C}$ to GND with a 0.1 1 F F ceramic capacitor as close as possible to <br> the device. |
| 10 | X- | Inverting Input/Output of Terminal X |
| 11 | X+ | Noninverting Input/Output of Terminal X |
| 12 | GND | Ground |
| 13 | W+ | Noninverting Input/Output of Terminal W |
| 14 | W- | Inverting Input/Output of Terminal W |
| - | EP | Exposed Pad. EP can be connected to GND or left unconnected. EP is not intended as an electrical <br> connection point. |

## Detailed Description

The MAX4989 is a USB 2.0 bidirectional crosspoint switch that allows the user to connect any 2 of 4 USB pairs. The device operates from a single +2.7 V to +5.5 V supply and features an internal charge pump to permit the full rail-to-rail swing necessary for USB low-/full-/Hi-Speed applications with data rates up to 480Mbps.

## Control Logic Inputs

The MAX4989 provides three control logic inputs, C0, C1, and C2, to control the switch connections as shown in the Functional Diagram/Truth Table. Driving the control logic inputs rail-to-rail minimizes power consumption.

## Shutdown Mode

The MAX4989 features a shutdown mode that reduces the supply current to less than $0.5 \mu \mathrm{~A}$ and places all switch terminals in high impedance. Drive all control inputs high or all control inputs low to place the device in shutdown mode (see Functional Diagram/Truth Table.)

## USB Switching

The low on-resistance and low on-capacitance of the MAX4989 make it ideal for high-performance Hi-Speed USB 2.0 switching applications. The MAX4989 is ideal for routing USB data lines and for applications that require switching between multiple USB hosts or devices (Figure 4).

## Layout

Hi-Speed USB requires careful PCB layout with con-trolled-impedance matched traces of equal lengths. Ensure that bypass capacitors are as close as possible to the device. Use large ground planes where possible.

## Power-Supply Sequencing

 Caution: Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the device.Proper power-supply sequencing is recommended for all devices. Always apply Vcc before applying signals, especially if the signal is not current limited.

PROCESS: BiCMOS
