

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## MAX606 Evaluation Kit

**Evaluates: MAX606/MAX607**

### General Description

The MAX606 evaluation kit (EV kit) provides a regulated +5V output voltage at up to 200mA while operating from a +3V to +5V input voltage. The MAX606 operates at frequencies up to 1MHz, allowing the use of small external components.

The MAX606 EV kit is a fully assembled and tested, surface-mount printed circuit board. It comes with the output voltage set to +5V, but can also be used to evaluate other output voltages between  $V_{IN}$  and +12.5V.

The MAX606 EV kit can also be used to evaluate the MAX607, which operates at 500kHz. Simply order a free sample of the MAX607EUA along with the MAX606 EV kit.

### Component List

DESIGNATION	QTY	DESCRIPTION
C1	1	2.2 $\mu$ F, 10V ceramic capacitor Taiyo Yuden LMK212BJ225MG-T
C2	1	4.7 $\mu$ F, 16V ceramic capacitor Taiyo Yuden EMK316BJ475ML-T
C4	1	0.01 $\mu$ F ceramic capacitor
C5	1	0.1 $\mu$ F ceramic capacitor
C6*	1	22 $\mu$ F, 16V tantalum capacitor
L1	1	5 $\mu$ H, 1A inductor Sumida CLS62B-5R0
D1	1	Schottky diode Zetex ZHCS1000
R1	1	1M $\Omega$ , 5% resistor
JU1	1	2-pin header
None	1	Shunt
U1	1	MAX606EUA (8-pin $\mu$ MAX)
None	1	MAX606 PC board
C3, R2, R3	0	Not installed

\*This capacitor is used to reduce ringing caused by lead inductance of the external power supplies. It is typically not needed in the production circuit (refer to the MAX606 data sheet for more information).

### Component Suppliers

SUPPLIER	PHONE	FAX
Sumida	847-956-0666	847-956-0702
Taiyo Yuden	408-573-4150	408-573-4159
Zetex	516-543-7100	516-864-7630

**Note:** Please indicate that you are using the MAX606 when contacting the above component suppliers.

For small orders, phone 1-800-835-8769.**

### Features

- ◆ +5V, +12V, or Adjustable Voltage
- ◆ Tiny Surface-Mount Design
- ◆ 200mA Output Current
- ◆ +3V to +5V Input Voltage Range
- ◆ 1 $\mu$ A IC Shutdown Current
- ◆ Up to 1MHz Switching Frequency
- ◆ Fully Assembled and Tested Surface-Mount Board

### Ordering Information

PART	TEMP. RANGE	IC PACKAGE
MAX606EVKIT	0°C to +70°C	8 $\mu$ MAX

### Quick Start

The MAX606 EV kit is fully assembled and tested. Follow these steps to verify board operation. **Do not turn on the power supply until all connections are completed.**

- 1) Connect a +3V to +5V power supply to the pad marked VIN. The ground connects to the GND pad.
- 2) Connect a voltmeter and load (if any) to the VOUT pad.
- 3) Make sure that JU1 is shunted.
- 4) Turn on the power and verify that the output voltage is +5V.
- 5) Refer to the *Other Output Voltages* section to modify the board for different output voltages.

### Evaluating the MAX607

To evaluate the MAX607, turn off the power to the EV kit. Replace L1 with a 10 $\mu$ H inductor and replace the MAX606 with a MAX607EUA. No other hardware changes are necessary. A good candidate for a 10 $\mu$ H inductor is a Sumida CLS62-100, which fits the same footprint as the CLS62B-5R0. Note that the CLS62-100 has a maximum current rating of 700mA, rather than 1A for the CLS62B-5R0.

# MAX606 Evaluation Kit

## Detailed Description

### Jumper Selection

The 2-pin header JU1 selects the shutdown mode for the MAX606 and JU2 selects the output voltage. Table 1 lists jumper options.

**Table 1. Jumper Functions**

JUMPER	STATE	FUNCTION
JU1	Open	SHDN pin connected to GND through a 1MΩ resistor. MAX606 in shutdown mode, $V_{OUT} = V_{IN} - V_D$ .
	Closed*	SHDN pin connected to VIN. MAX606 enabled, $V_{OUT} = 5V$ .
JU2	1–2* (default trace)	FB pin connected to VIN. $V_{OUT} = 5V$ .
	2–3	FB pin connected to GND. $V_{OUT} = 12V$ .
	Open	FB pin connected to resistor-divider R2 and R3, for adjustable output voltage.

\* Indicates default setting

### Other Output Voltages

The MAX606 output voltage is pin-programmable to 5V and 12V, and also adjustable to voltages between  $V_{IN}$  and 12.5V. The MAX606 EV kit comes with the output voltage set at 5V through a cuttable trace between JU2 pins 1 and 2. If a 12V output is desired from the MAX606 circuit, cut the trace between JU2 pins 1 and 2, install a jumper between JU2 pins 2 and 3, and change C2 to a 1μF ceramic capacitor.

If an adjustable output voltage is desired from the circuit, cut the trace between JU2 pins 1 and 2 and add the voltage-divider resistors R2 and R3 located on the board's solder side. Choose R2 and R3 as follows:

$$R2 = R3(V_{OUT} / V_{REF} - 1)$$

where  $V_{REF} = 2V$ . Since the input current at FB is 200nA (max), large values (up to 100kΩ) can be used for R3 with no significant loss of accuracy. C3, also provided on the solder side, is an optional feed-forward capacitor that can reduce output voltage ripple at light loads. If this feature is desired, choose a value of C3 in the 4.7pF to 10pF range.
