

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Ultra-Low-Power Series Voltage Reference

MAX6129

General Description

The MAX6129 micropower, low-dropout bandgap voltage reference combines ultra-low supply current and low drift in a miniature 5-pin SOT23 surface-mount package that uses 70% less board space than comparable devices in an SO package. This series-mode voltage reference sources up to 4mA and sinks up to 1mA of load current. A wide 2.5V to 12.6V supply range, ultra-low 5.25 μ A (max) supply current, and a low 200mV dropout voltage make these devices ideal for battery-operated systems.

An initial accuracy of 0.4% and a 40ppm/ $^{\circ}$ C (max) temperature coefficient make the MAX6129 suitable for precision applications. Additionally, an internal compensation capacitor eliminates the need for an external compensation capacitor and ensures stability with load capacitances up to 10 μ F.

The MAX6129 provides six output voltages of 2.048V, 2.5V, 3V, 3.3V, 4.096V, and 5V. The MAX6129 is available in a 5-pin SOT23 package and in die form.

Applications

Battery-Powered Systems
Handheld Instruments
Precision Power Supplies
A/D and D/A Converters

Typical Operating Circuit

Features

- ◆ Ultra-Low 5.25 μ A (max) Supply Current
- ◆ 4mA Output Source Current
- ◆ 1mA Output Sink Current
- ◆ \pm 0.4% (max) Initial Accuracy
- ◆ 40ppm/ $^{\circ}$ C (max) Temperature Coefficient
- ◆ 2.5V to 12.6V Supply Range
- ◆ Low 200mV Dropout
- ◆ Stable with Capacitive Loads Up to 10 μ F
- ◆ No External Capacitors Required
- ◆ Miniature 5-Pin SOT23 Package

Note 1: MAX6129 is 100% production tested at T_A = +25°C and is guaranteed by design for T_A = T_{MIN} to T_{MAX} as specified.

Note 2: Temperature coefficient is defined by box method: (V_{MAX} - V_{MIN})/(ΔT × V_{+25°C}).

Note 3: Not production tested. Guaranteed by design for both SOT23 and dice.

Note 4: Only the typical values apply to MAX6129A sold in die form (max values apply to packaged parts).

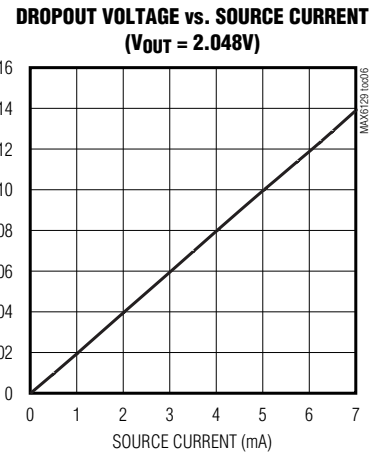

Note 5: Thermal hysteresis is defined as the change in output voltage at T_A = +25°C before and after cycling the device from T_{MAX} to T_{MIN}.

Note 6: Dropout voltage is the minimum input voltage at which V_{OUT} changes by 0.1% from V_{OUT} at rated V_{IN} and is guaranteed by Load Regulation Test.

Applications Information

Input Bypassing

The MAX6129 does not require an input bypass capacitor. For improved transient performance, bypass the input to ground with a 0.1 μ F ceramic capacitor. Place the capacitor as close to IN as possible.

Load Capacitance

The MAX6129 does not require an output capacitor for stability. The MAX6129 is stable driving capacitive loads from 0 to 100pF and 0.1 μ F to 10 μ F when sourcing current and from 0 to 0.4 μ F when sinking current. In applications where the load or the supply can experience step changes, an output capacitor reduces the amount of overshoot (undershoot) and improves the circuit's transient response. Many applications do not require an external capacitor, and the MAX6129 offers a significant advantage in applications where board space is critical.

Supply Current

The quiescent supply current of the series-mode MAX6129 is very small, 5.25 μ A (max), and is very stable against changes in the supply voltage with only 1.5 μ A/V (max) variation with supply voltage. The MAX6129 family draws load current from the input voltage source only when required, so supply current is not wasted and efficiency is maximized at all input voltages. This improved efficiency reduces power dissipation and extends battery life.

Output Thermal Hysteresis

Output thermal hysteresis is the change of output voltage at $T_A = +25^\circ\text{C}$ before and after the device is cycled over its entire operating temperature range. Hysteresis is caused by differential package stress appearing across the device.

Temperature Coefficient vs. Operating Temperature Range for a 1LSB Maximum Error

In a data converter application, the reference voltage of the converter must stay within a certain limit to keep the error in the data converter smaller than the resolution limit through the operating temperature range. Figure 1 shows the maximum allowable reference voltage temperature coefficient to keep the conversion error to less than 1LSB, as a function of the operating temperature range ($T_{MAX} - T_{MIN}$) with the converter resolution as a parameter. The graph assumes the reference-voltage temperature coefficient as the only parameter affecting accuracy.

Figure 1. Temperature Coefficient vs. Operating Temperature Range for a 1LSB Maximum Error

Ultra-Low-Power Series Voltage Reference

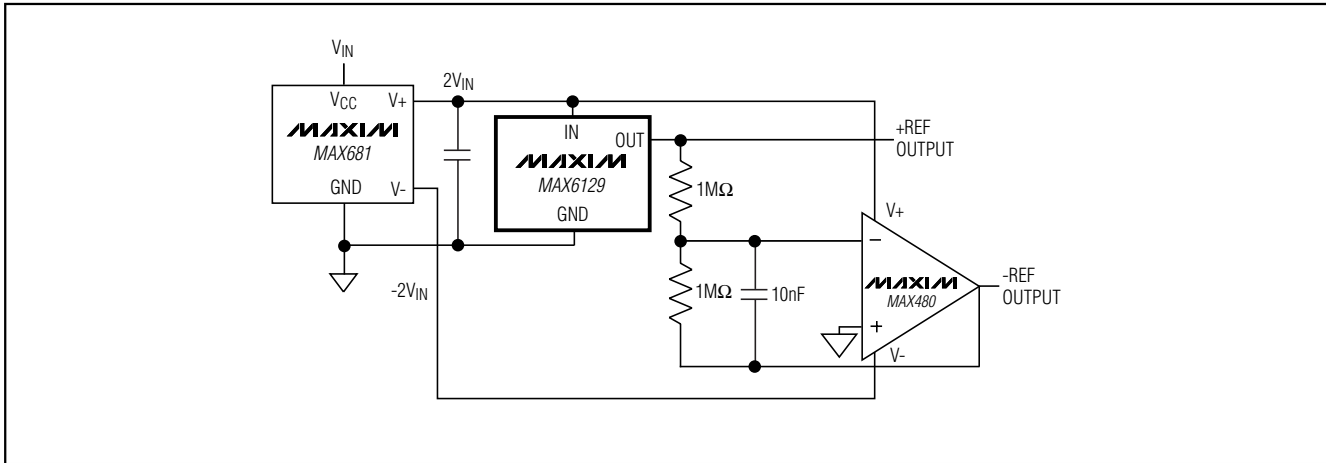

Figure 2. Positive and Negative References from a Single 3V/5V Supply

In reality, the absolute static accuracy of a data converter is dependent on the combination of many parameters such as integral nonlinearity, differential nonlinearity, offset error, gain error, as well as voltage reference changes.

Turn-On Time

These devices typically turn on and settle to within 0.1% of their final value in less than 1.4ms. The turn-on time increases when heavily loaded and operating close to dropout.

Positive and Negative Low-Power Voltage Reference

Figure 2 shows a typical method for developing a bipolar reference. The circuit uses a MAX681 voltage doubler/inverter charge-pump converter to power a MAX480, creating a positive as well as a negative reference voltage.

NOTES:

- ALL DIMENSIONS ARE IN MILLIMETERS.
- FOOT LENGTH MEASURED AT INTERCEPT POINT BETWEEN DATUM A & LEAD SURFACE.
- PACKAGE OUTLINE EXCLUSIVE OF MOLD FLASH & METAL BURR. MOLD FLASH, PROTRUSION OR METAL BURR SHOULD NOT EXCEED 0.25 MM.
- PACKAGE OUTLINE INCLUSIVE OF SOLDER PLATING.
- MEETS JEDEC MO178, VARIATION AA.
- LEADS TO BE COPLANAR WITHIN 0.10 mm.
- SOLDER THICKNESS MEASURED AT FLAT SECTION OF LEAD BETWEEN 0.08mm AND 0.15mm FROM LEAD TIP.
