

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Precision, High-Bandwidth Op Amp

MAX9622

General Description

The MAX9622 op amp features rail-to-rail output and 50MHz GBW at just 1mA supply current. At power-up, this device autocalibrates its input offset voltage to less than 100 μ V. It operates from a single-supply voltage of 2.0V to 5.25V.

The MAX9622 is available in a tiny 2mm x 2mm, 5-pin SC70 package and is rated over the -40°C to +125°C automotive temperature range.

Applications

Power Modules
Automotive Power Supplies
ADC Drivers for Industrial Systems
Instrumentation
Filters

Features

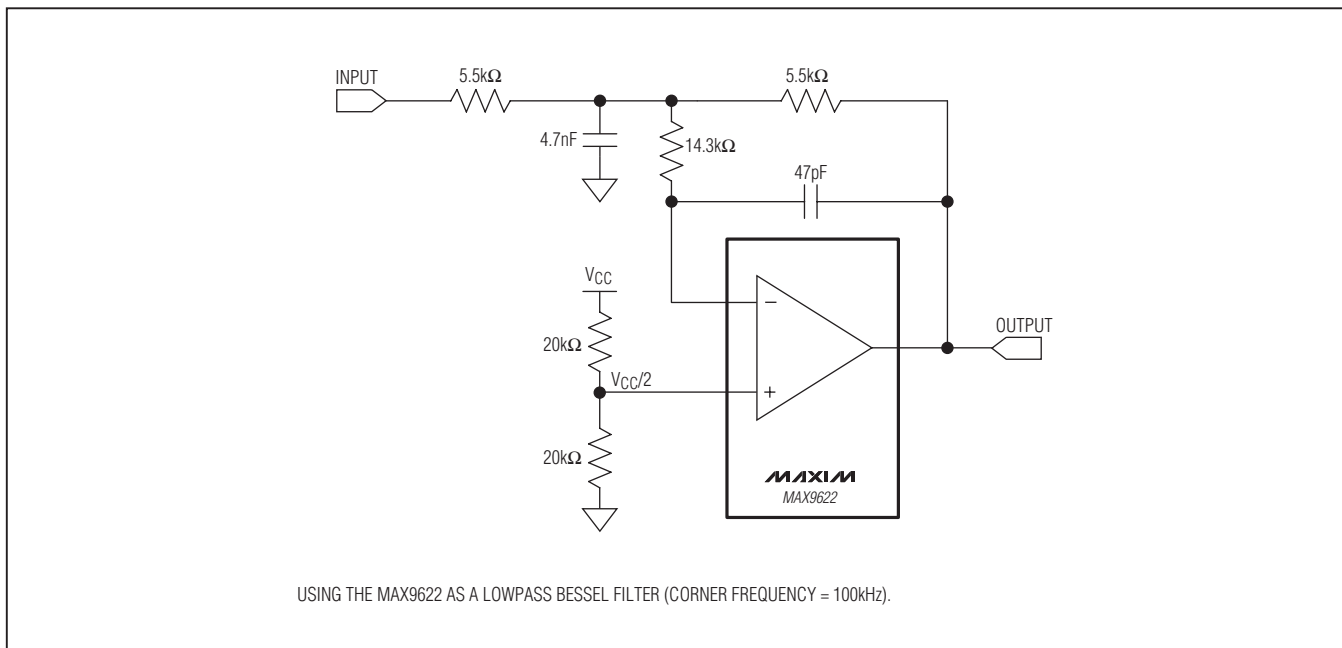

- ◆ 50MHz UGBW
- ◆ Low Input Voltage Offset Voltage (100 μ V max)
- ◆ Input Common-Mode Voltage Range Extends Below Ground
- ◆ Wide 2.0V to 5.25V Supply Range
- ◆ Low 1mA Supply Current

Ordering Information

PART	TEMP RANGE	PIN-PACKAGE	TOP MARK
MAX9622AXK+T	-40°C to +125°C	5 SC70	AUA

+ Denotes a lead(Pb)-free/RoHS-compliant package.
T = Tape and reel.

Typical Application Circuit

Precision, High-Bandwidth Op Amp

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{CC} to GND).....-0.3V to +5.5V
 All Other Pins.....(GND - 0.3V) to (V_{CC} + 0.3V)
 Short-Circuit Duration to GND or V_{CC} 1s
 Continuous Input Current (any pins)..... ± 20 mA
 Thermal Limits (Note 1)
 Continuous Power Dissipation ($T_A = +70^\circ\text{C}$)
 5-Pin SC70 (derate 3.1mW/ $^\circ\text{C}$ above $+70^\circ\text{C}$)245.4mW

Operating Temperature Range..... -40°C to $+125^\circ\text{C}$
 Junction Temperature $+150^\circ\text{C}$
 Storage Temperature Range..... -65°C to $+150^\circ\text{C}$
 Lead Temperature (soldering, 10s) $+300^\circ\text{C}$
 Soldering Temperature (reflow) $+260^\circ\text{C}$

Note 1: Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to www.maxim-ic.com/thermal-tutorial.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS

($V_{CC} = 5\text{V}$, $V_{IN+} = V_{IN-} = 0\text{V}$, $R_L = 10\text{k}\Omega$ to $V_{CC}/2$, $T_A = -40^\circ\text{C}$ to $+125^\circ\text{C}$, unless otherwise noted. Typical values are at $T_A = +25^\circ\text{C}$.) (Note 2)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS	
POWER SUPPLY							
Supply Voltage Range	V_{CC}	Guaranteed by PSRR	2		5.25	V	
Supply Current	I_{CC}	No load	$T_A = +25^\circ\text{C}$		2.1	mA	
			$-40^\circ\text{C} \leq T_A \leq +125^\circ\text{C}$				
Power-Supply Rejection Ratio	PSRR	$T_A = +25^\circ\text{C}$		97	126	dB

Pin Configuration

Pin Description

PIN	NAME	FUNCTION
1	IN+	Positive Input
2	GND	Ground
3	IN-	Negative Input
4	OUT	Output
5	VCC	Positive Power Supply. Bypass with a 0.1 μ F capacitor to ground.

Precision, High-Bandwidth Op Amp

Detailed Description

The MAX9622 is a power-efficient, high-speed op amp ideal for capturing fast edges in a wide variety of signal processing applications.

It precisely calibrates its V_{OS} on power-up to eliminate the effects of package stresses, power supplies, and temperature.

Applications Information

Power-Up Autotrim

The MAX9622 features power-up autotrimming that allows the devices to achieve less than $100\mu\text{V}$ of input offset voltage. The startup sequence takes approximately 4ms to complete after the supply voltage exceeds an internal threshold of 1.8V. During this time, the inputs and outputs are connected to an auxiliary amplifier that has an input offset of 5mV (typ). As soon as the autotrimming is completed, the inputs and outputs switch from the auxiliary amplifier to the calibrated amplifier. The calibration settings hold until the supply voltage drops below an internal threshold of 1.4V. This could be used to recalibrate the amplifier. The supply current of the part increases to about 2.5mA during the power-up autotrim period. Use good supply decoupling with low ESR capacitors.

Active Filters

The MAX9622 is ideal for a wide variety of active filter circuits that make use of their wide output voltage swings and large bandwidth capabilities. The *Typical Application Circuit* shows a multiple feedback active filter circuit example with a 100kHz corner frequency. At low frequencies, the amplifier behaves like a simple low-distortion inverting amplifier gain = -1, while its high bandwidth gives excellent stopband attenuation above its corner frequency. See the *Typical Application Circuit*.

Input Differential Voltage Protection

During normal op-amp operation, the inverting and non-inverting inputs of the MAX9622 are at essentially the same voltage. However, either due to fast input voltage transients or due to loss of negative feedback, these pins can be forced to different voltages. Internal back-to-back diodes and series resistors protect input-stage transistors from large input differential voltages (see Figure 2). $\text{IN}+$ and $\text{IN}-$ can survive any voltage between the power-supply rails.

This op amp has been designed to exhibit no phase inversion to overdriven inputs.
