Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

F²MC-16LX MB90595G Series CMOS 16-bit Proprietary Microcontroller

The MB90595G series with FULL-CAN interface and FLASH ROM is especially designed for automotive and industrial applications. Its main features are two on board CAN Interfaces, which conform to V2.0 Part A and Part B, while supporting a very flexible message buffer scheme and so offering more functions than a normal full CAN approach.
The instruction set of F²MC-16LX CPU core inherits an AT architecture of the F²MC* family with additional instruction sets for high-level languages, extended addressing mode, enhanced multiplication/division instructions, and enhanced bit manipulation instructions. The microcontroller has a 32-bit accumulator for processing long word data.
The MB90595G series has peripheral resources of 8/10-bit A/D converters, UART (SCI), extended I/O serial interface, 8/16-bit PPG timer, I/O timer (input capture (ICU), output compare (OCU)) and stepping motor controller.

Features

- Clock
  Embedded PLL clock multiplication circuit
  Operating clock (PLL clock) can be selected from divided-by-2 of oscillation or one to four times the oscillation (at oscillation of 4 MHz, 4 MHz to 16 MHz).
  Minimum instruction execution time: 62.5 ns (operation at oscillation of 4 MHz, four times the oscillation clock, V_{CC} of 5.0 V)
- Instruction set to optimize controller applications
  Rich data types (bit, byte, word, long word)
  Rich addressing mode (23 types)
  Enhanced signed multiplication/division instruction and RETI instruction functions
  Enhanced precision calculation realized by the 32-bit accumulator
- Instruction set designed for high level language (C language) and multi-task operations
  Adoption of system stack pointer
  Enhanced pointer indirect instructions
  Barrel shift instructions
- Program patch function (for two address pointers)
- Enhanced execution speed: 4-byte instruction queue
- Enhanced interrupt function: 8 levels, 34 factors
- Automatic data transmission function independent of CPU operation
  Extended intelligent I/O service function (EI²OS): Up to 10 channels
- Embedded ROM size and types
  Mask ROM: 128 Kbytes
  Flash ROM: 128 Kbytes
  Embedded RAM size: 4 Kbytes (MB90595G: 6 Kbytes)
- Flash ROM
  Supports automatic programming, Embedded Algorithm Write/Erase/Erase-Suspend/Resume commands
  A flag indicating completion of the algorithm
  Hard-wired reset vector available in order to point to a fixed boot sector
  Erase can be performed on each block
  Block protection with external programming voltage
- Low-power consumption (stand-by) mode
  Sleep mode (mode in which CPU operating clock is stopped)
  Stop mode (mode in which oscillation is stopped)
  CPU intermittent operation mode
  Hardware stand-by mode
- Process: 0.5 μm CMOS technology
- I/O port
  General-purpose I/O ports: 78 ports
  Push-pull output and Schmitt trigger input.
  Programmable on each bit as I/O or signal for peripherals.
- Timer
  Watchdog timer: 1 channel
  8/16-bit PPG timer: 8/16-bit × 6 channels
  16-bit re-load timer: 2 channels
- 16-bit I/O timer
  16-bit Free-run timer: 1 channel
  Input capture: 4 channels
  Output compare: 4 channels
- Extended I/O serial interface: 1 channel
- UART0
  With full-duplex double buffer (8-bit length)
  Clock asynchronized or clock synchronized (with start/stop bit) transmission can be selectively used.
- UART1 (SCI)
  With full-duplex double buffer (8-bit length)
  Clock asynchronized or clock synchronized serial transmission (I/O extended transmission) can be selectively used.
- Stepping motor controller (4 channels)
- External interrupt circuit (8 channels)
  A module for starting an extended intelligent I/O service (EI²OS) and generating an external interrupt which is triggered by an external input.
- Delayed interrupt generation module: Generates an interrupt request for switching tasks.
- 8/10-bit A/D converter (8 channels)
  8/10-bit resolution can be selectively used.
  Starting by an external trigger input.
- FULL-CAN interface: 1 channel
  Conforming to Version 2.0 Part A and Part B
  Flexible message buffering (mailbox and FIFO buffering can be mixed)
- 18-bit Time-base counter
- External bus interface: Maximum address space 16 Mbytes

Contents

1. Product Lineup

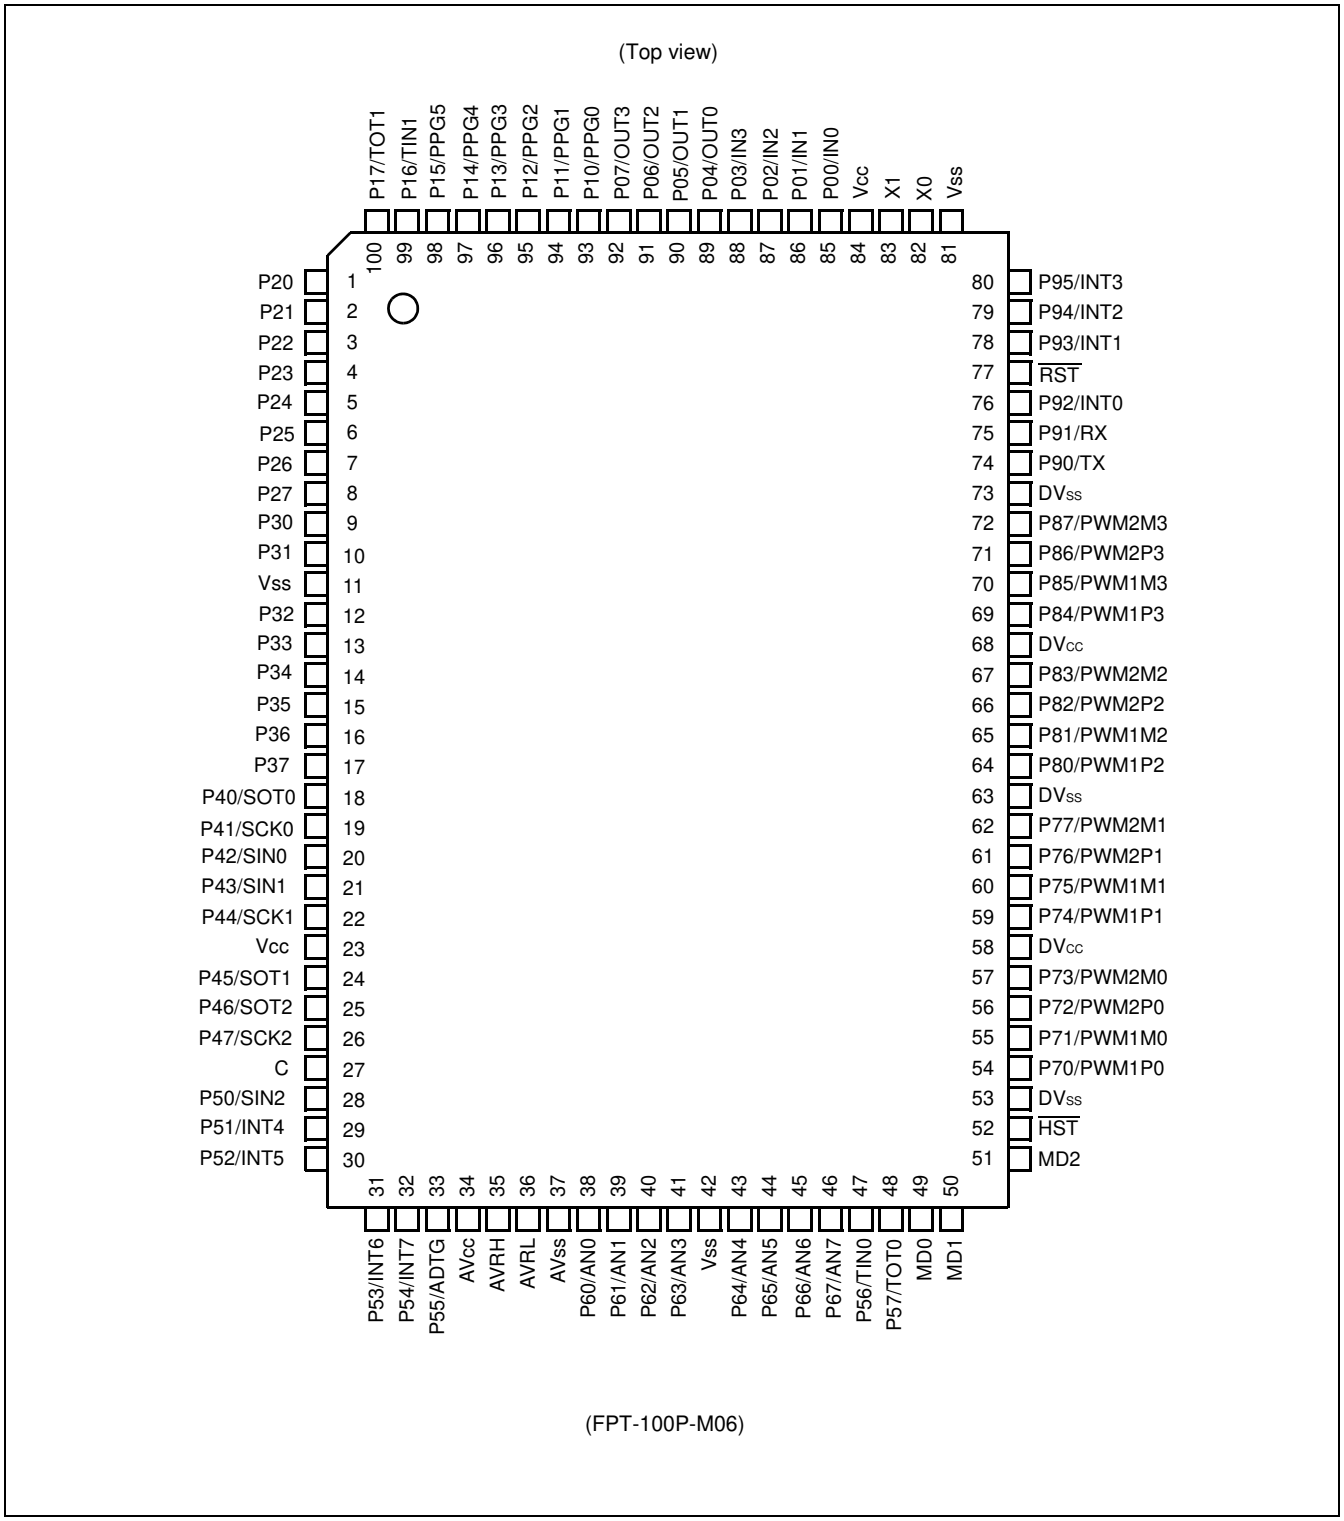
Features		MB90598G	MB90F598G	MB90V595G
Classification		Mask ROM product	Flash ROM product	Evaluation product
ROM size		128 Kbytes	128 Kbytes Boot block Hard-wired reset vector	None
RAM size		4 Kbytes	4 Kbytes	6 Kbytes
Emulator-specific power supply *1		—		None
CPU functions		The number of instructions: 351 Instruction bit length: 8 bits, 16 bits Instruction length: 1 byte to 7 bytes Data bit length: 1 bit, 8 bits, 16 bits Minimum execution time: 62.5 ns (at machine clock frequency of 16 MHz) Interrupt processing time: 1.5 μs (at machine clock frequency of 16 MHz, minimum value)		
UART0		Clock synchronized transmission (500 K/1 M/2 Mbps) Clock asynchronized transmission (4808/5208/9615/10417/19230/38460/62500 /500000 bps at machine clock frequency of 16 MHz) Transmission can be performed by bi-directional serial transmission or by master/slave connection.		
UART1(SCI)		Clock synchronized transmission (62.5 K/125 K/250 K/500 K/1 Mbps) Clock asynchronized transmission (1202/2404/4808/9615/31250 bps) Transmission can be performed by bi-directional serial transmission or by master/slave connection.		
8/10-bit A/D converter		Conversion precision: 8/10-bit can be selectively used. Number of inputs: 8 One-shot conversion mode (converts selected channel once only) Scan conversion mode (converts two or more successive channels and can program up to 8 channels) Continuous conversion mode (converts selected channel continuously) Stop conversion mode (converts selected channel and stop operation repeatedly)		
8/16-bit PPG timers (6 channels)		Number of channels: 6 (8/16-bit × 6 channels) PPG operation of 8-bit or 16-bit A pulse wave of given intervals and given duty ratios can be output. Pulse interval: fsys, fsys/2^1, fsys/2^2, fsys/2^3, fsys/2^4 (fsys = system clock frequency) 128μs (fosc = 4MHz: oscillation clock frequency)		
16-bit Reload timer		Number of channels: 2 Operation clock frequency: fsys/2^1, fsys/2^3, fsys/2^5 (fsys = System clock frequency) Supports External Event Count function		
16-bit I/O timer	16-bit Output compares	Number of channels: 4 Pin input factor: A match signal of compare register		
	Input captures	Number of channels: 4 Rewriting a register value upon a pin input (rising, falling, or both edges)		

Features	MB90598G	MB90F598G	MB90V595G
CAN Interface	Number of channels: 1 Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID's Supports multiple messages Flexible configuration of acceptance filtering: Full bit compare / Full bit mask / Two partial bit masks Supports up to 1Mbps CAN bit timing setting: MB90598G/F598G:TSEG2 ≥ RSJW		
Stepping motor controller (4 channels)	Four high current outputs for each channel Synchronized two 8-bit PWM's for each channel		
External interrupt circuit	Number of inputs: 8 Started by a rising edge, a falling edge, an "H" level input, or an "L" level input.		
Serial IO	Clock synchronized transmission (31.25 K/62.5 K/125 K/500 K/1 Mbps at system clock frequency of 16 MHz) LSB first/MSB first		
Watchdog timer	Reset generation interval: 3.58 ms, 14.33 ms, 57.23 ms, 458.75 ms (at oscillation of 4 MHz, minimum value)		
Flash Memory	Supports automatic programming, Embedded Algorithm and Write/Erase/Erase-Suspend/Resume commands A flag indicating completion of the algorithm Hard-wired reset vector available in order to point to a fixed boot sector in Flash Memory Boot block configuration Erase can be performed on each block Block protection with external programming voltage Flash Writer from Minato Electronics, Inc.		
Low-power consumption (stand-by) mode	Sleep/stop/CPU intermittent operation/watch timer/hardware stand-by		
Process	CMOS		
Power supply voltage for operation*2	+5 V±10 %		
Package	QFP-100		PGA-256

*1: It is setting of DIP switch S2 when Emulation pod (MB2145-507) is used.
Please refer to the MB2145-507 hardware manual (2.7 Emulator-specific Power Pin) about details.

*2: Varies with conditions such as the operating frequency. (See "Electrical Characteristics.")

2. Pin Assignment



3. Pin Description

Pin no.	Pin name	Circuit type	Function
82	X0	A	Oscillator pin
83	X1		
77	$\overline{\text{RST}}$	B	Reset input
52	$\overline{\text{HST}}$	C	Hardware standby input
85 to 88	P00 to P03	G	General purpose IO
	IN0 to IN3		Inputs for the Input Captures
89 to 92	P04 to P07	G	General purpose IO
	OUT0 to OUT3		Outputs for the Output Compares.
93 to 98	P10 to P15	D	General purpose IO
	PPG0 to PPG5		Outputs for the Programmable Pulse Generators
99	P16	D	General purpose IO
	TIN1		TIN input for the 16-bit Reload Timer 1
100	P17	D	General purpose IO
	TOT1		TOT output for the 16-bit Reload Timer 1
1 to 8	P20 to P27	G	General purpose IO
9 to 10	P30 to P31	G	General purpose IO
12 to 16	P32 to P36	G	General purpose IO
17	P37	D	General purpose IO
18	P40	G	General purpose IO
	SOT0		SOT output for UART 0
19	P41	G	General purpose IO
	SCK0		SCK input/output for UART 0
20	P42	G	General purpose IO
	SIN0		SIN input for UART 0
21	P43	G	General purpose IO
	SIN1		SIN input for UART 1
22	P44	G	General purpose IO
	SCK1		SCK input/output for UART 1
24	P45	G	General purpose IO
	SOT1		SOT output for UART 1
25	P46	G	General purpose IO
	SOT2		SOT output for the Serial IO
26	P47	G	General purpose IO
	SCK2		SCK input/output for the Serial IO

Pin no.	Pin name	Circuit type	Function
28	P50	D	General purpose IO
	SIN2		SIN Input for the Serial IO
29 to 32	P51 to P54	D	General purpose IO
	INT4 to INT7		External interrupt input for INT4 to INT7
33	P55	D	General purpose IO
	ADTG		Input for the external trigger of the A/D Converter
38 to 41	P60 to P63	E	General purpose IO
	AN0 to AN3		Inputs for the A/D Converter
43 to 46	P64 to P67	E	General purpose IO
	AN4 to AN7		Inputs for the A/D Converter
47	P56	D	General purpose IO
	TIN0		TIN input for the 16-bit Reload Timer 0
48	P57	D	General purpose IO
	TOT0		TOT output for the 16-bit Reload Timer 0
54 to 57	P70 to P73	F	General purpose IO
	PWM1P0 PWM1M0 PWM2P0 PWM2M0		Output for Stepper Motor Controller channel 0
59 to 62	P74 to P77	F	General purpose IO
	PWM1P1 PWM1M1 PWM2P1 PWM2M1		Output for Stepper Motor Controller channel 1
64 to 67	P80 to P83	F	General purpose IO
	PWM1P2 PWM1M2 PWM2P2 PWM2M2		Output for Stepper Motor Controller channel 2
69 to 72	P84 to P87	F	General purpose IO
	PWM1P3 PWM1M3 PWM2P3 PWM2M3		Output for Stepper Motor Controller channel 3
74	P90	D	General purpose IO
	TX		TX output for CAN Interface
75	P91	D	General purpose IO
	RX		RX input for CAN Interface

Pin no.	Pin name	Circuit type	Function
76	P92	D	General purpose IO
	INT0		External interrupt input for INT0
78 to 80	P93 to P95	D	General purpose IO
	INT1 to INT3		External interrupt input for INT1 to INT3
58, 68	DV_{CC}	—	Dedicated power supply pins for the high current output buffers (Pin No. 54 to 72)
53, 63, 73	DV_{SS}	—	Dedicated ground pins for the high current output buffers (Pin No. 54 to 72)
34	AV_{CC}	Power supply	Dedicated power supply pin for the A/D Converter
37	AV_{SS}	Power supply	Dedicated ground pin for the A/D Converter
35	AVRH	Power supply	Upper reference voltage input for the A/D Converter
36	AVRL	Power supply	Lower reference voltage input for the A/D Converter
49, 50	MD0 MD1	C	Operating mode selection input pins. These pins should be connected to V_{CC} or V_{SS}.
51	MD2	H	Operating mode selection input pin. This pin should be connected to V_{CC} or V_{SS}.
27	C	—	External capacitor pin. A capacitor of 0.1μF should be connected to this pin and V_{SS}.
23, 84	V_{CC}	Power supply	Power supply pins (5.0 V).
11, 42, 81	V_{SS}	Power supply	Ground pins (0.0 V).

4. I/O Circuit Type

Circuit Type	Circuit	Remarks
A		■ Oscillation feedback resistor: 1 MΩ approx.
B		■ Hysteresis input with pull-up Resistor: 50 kΩ approx.
C		■ Hysteresis input

Circuit Type	Circuit	Remarks
D		■ CMOS output ■ CMOS Hysteresis input
E		■ CMOS output ■ CMOS Hysteresis input ■ Analog input

(Continued)

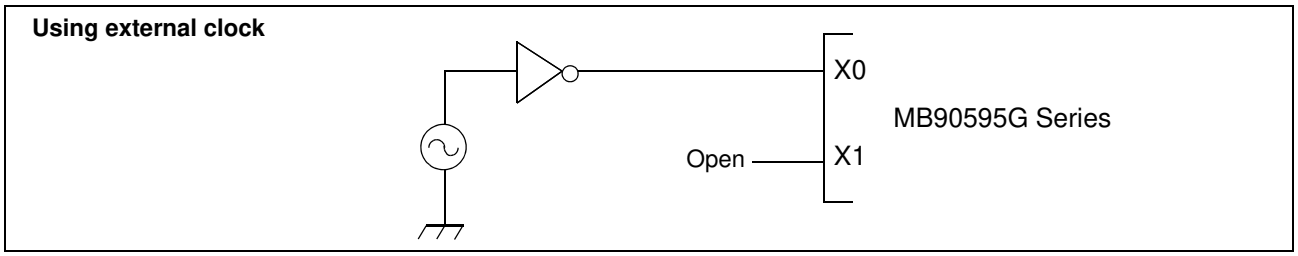
Circuit Type	Circuit	Remarks
F		■ CMOS high current output ■ CMOS Hysteresis input
G		■ CMOS output ■ CMOS Hysteresis input ■ TTL input (MB90F598G, only in Flash mode)
H		■ Hysteresis input Pull-down Resistor: 50 kΩ approx. (except MB90F598G)

5. Handling Devices

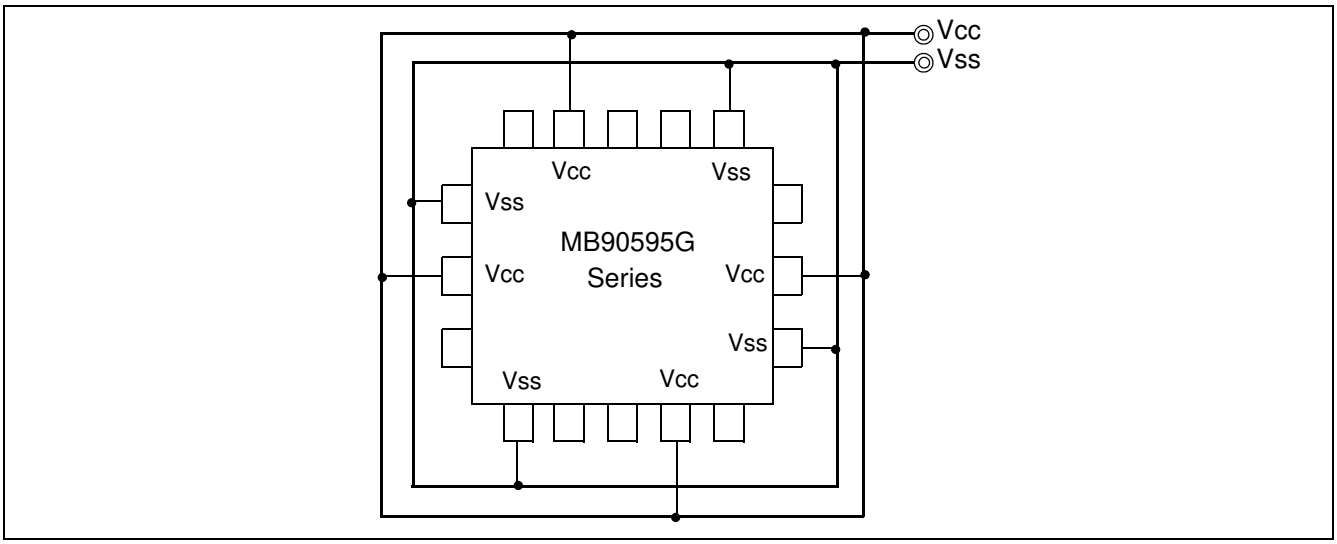
(1) Make Sure that the Voltage not Exceed the Maximum Rating (to Avoid a Latch-up).
In CMOS ICs, a latch-up phenomenon is caused when an voltage exceeding V_{CC} or an voltage below V_{SS} is applied to input or output pins or a voltage exceeding the rating is applied across V_{CC} and V_{SS}.
When a latch-up is caused, the power supply current may be dramatically increased causing resultant thermal break-down of devices. To avoid the latch-up, make sure that the voltage not exceed the maximum rating.
In turning on/turning off the analog power supply, make sure the analog power voltage (AV_{CC}, AVRH, DV_{CC}) and analog input voltages not exceed the digital voltage (V_{CC}).

(2) Treatment of Unused Pins
Unused input pins left open may cause abnormal operation, or latch-up leading to permanent damage. Unused input pins should be pulled up or pulled down through at least 2 kΩ resistance.
Unused input/output pins may be left open in output state, but if such pins are in input state they should be handled in the same way as input pins.

(3) Using external clock
In using the external clock, drive X0 pin only and leave X1 pin unconnected.



(4) Power supply pins (Vcc/Vss)
In products with multiple V_{cc} or V_{ss} pins, pins with the same potential are internally connected in the device to avoid abnormal operations including latch-up. However, you must connect the pins to an external power and a ground line to lower the electro-magnetic emission level, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total current rating (See the figure below.)
Make sure to connect V_{cc} and V_{ss} pins via lowest impedance to power lines.
It is recommended to provide a bypass capacitor of around 0.1 µF between V_{cc} and V_{ss} pins near the device.



(5) Pull-up/down resistors
The MB90595G Series does not support internal pull-up/down resistors. Use external components where needed.

(6) Crystal Oscillator Circuit
Noises around X0 or X1 pins may cause abnormal operations. Make sure to provide bypass capacitors via shortest distance from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure that lines of oscillation circuit not cross the lines of other circuits.
A printed circuit board artwork surrounding the X0 and X1 pins with ground area for stabilizing the operation is highly recommended.

(7) Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs
Make sure to turn on the A/D converter power supply (AV_{CC}, AVRH, AVRL) and analog inputs (AN0 to AN7) after turning-on the digital power supply (V_{CC}).
Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed AVRH or AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable).

(8) Connection of Unused Pins of A/D Converter
Connect unused pins of A/D converter to $AV_{CC} = V_{CC}$, $AV_{SS} = AVRH = DV_{CC} = V_{SS}$.

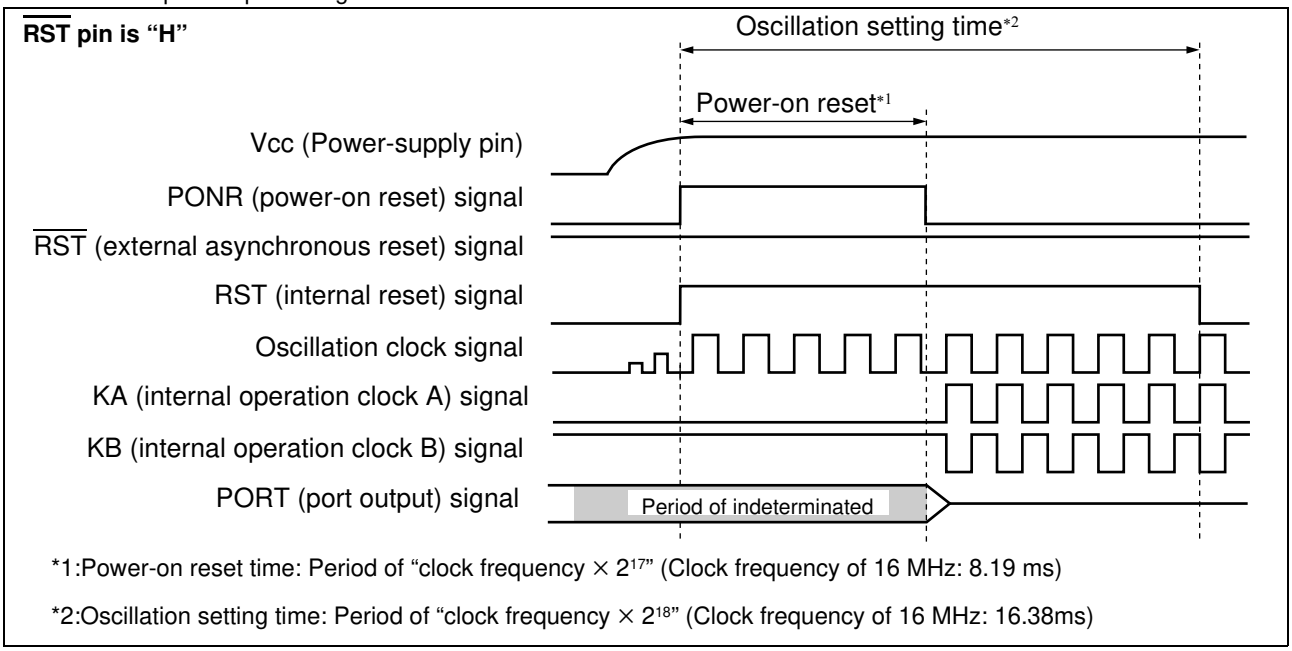
(9) N.C. Pin
The N.C. (internally connected) pin must be opened for use.

(10) Notes on Energization
To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 µs or more (0.2 V to 2.7 V).

(11) Indeterminate outputs from ports 0 and 1 (MB90V595G only)
During oscillation setting time of step-down circuit (during a power-on reset) after the power is turned on, the outputs from ports 0 and 1 become following state.

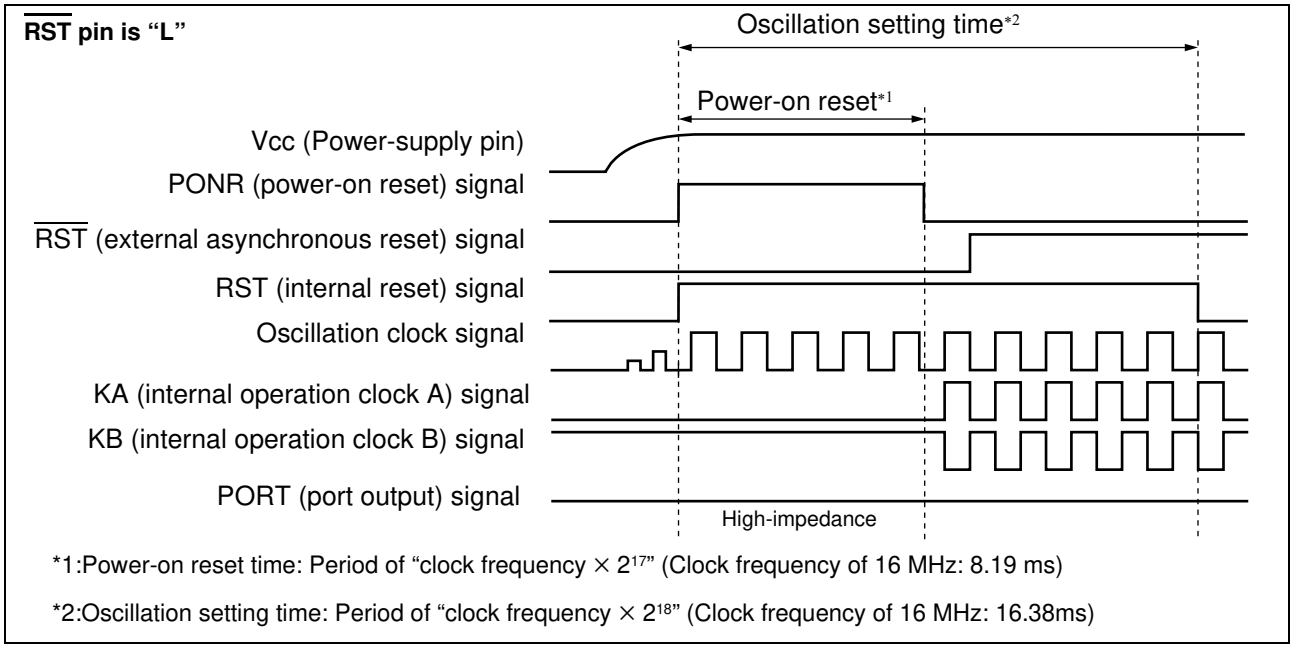
- If $\overline{RST}$ pin is “H”, the outputs become indeterminate.
- If $\overline{RST}$ pin is “L”, the outputs become high-impedance.

Pay attention to the port output timing shown as follows.



*1:Power-on reset time: Period of “clock frequency × 2^{17}” (Clock frequency of 16 MHz: 8.19 ms)

*2:Oscillation setting time: Period of “clock frequency × 2^{18}” (Clock frequency of 16 MHz: 16.38ms)



(12) Initialization

The device contains internal registers which are initialized only by a power-on reset. To initialize these registers, please turn on the power again.

(13) Directions of “DIV A, Ri” and “DIVW A, RWi” instructions

In the signed multiplication and division instructions (“DIV A, Ri” and “DIVW A, RWi”), the value of the corresponding bank register (DTB, ADB, USB, SSB) is set in “00_H”.

If the values of the corresponding bank register (DTB,ADB,USB,SSB) are set to other than “00_H”, the remainder by the execution result of the instruction is not stored in the register of the instruction operand.

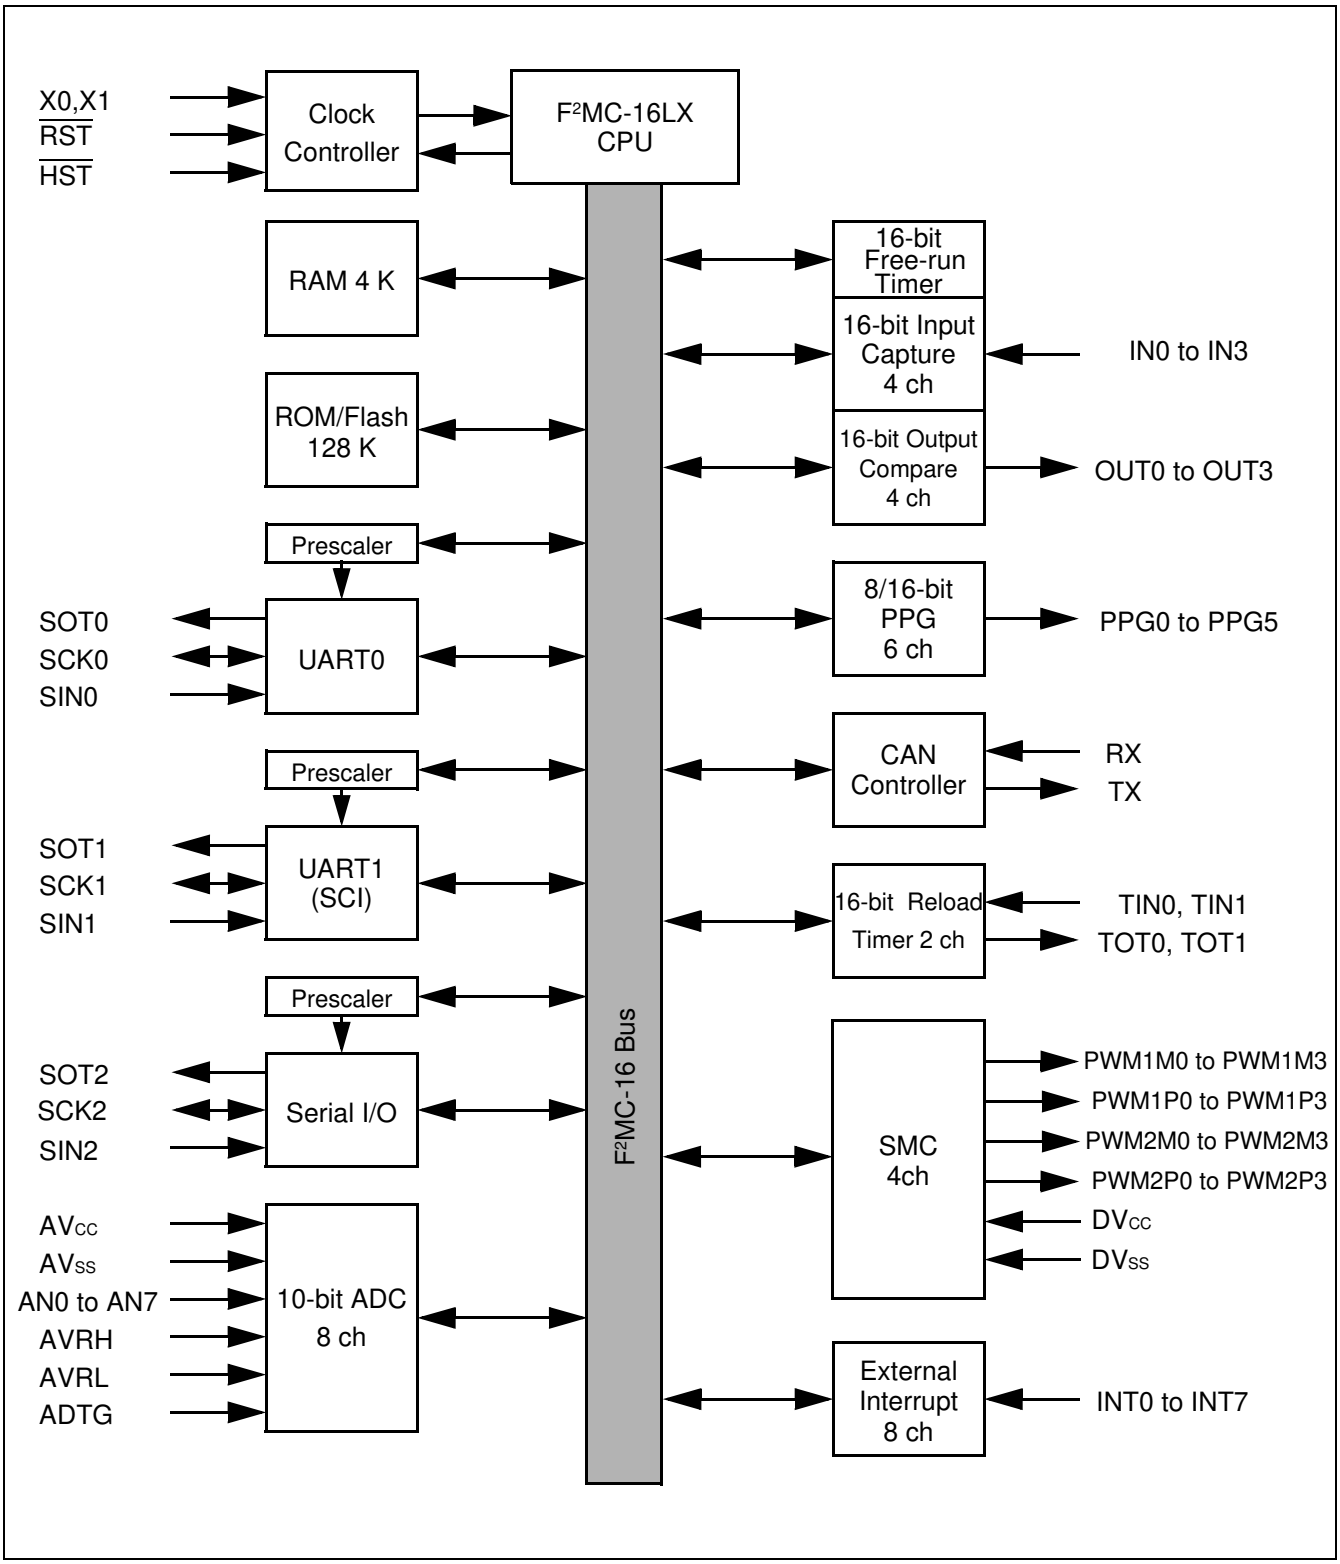
(14) Using REALOS

The use of EI^{2}OS is not possible with the REALOS real time operating system.

(15) Caution on Operations during PLL Clock Mode

If the PLL clock mode is selected in the microcontroller, it may attempt to continue the operation using the free-running frequency of the automatic oscillating circuit in the PLL circuitry even if the oscillator is out of place or the clock input is stopped. Performance of this operation, however, cannot be guaranteed.

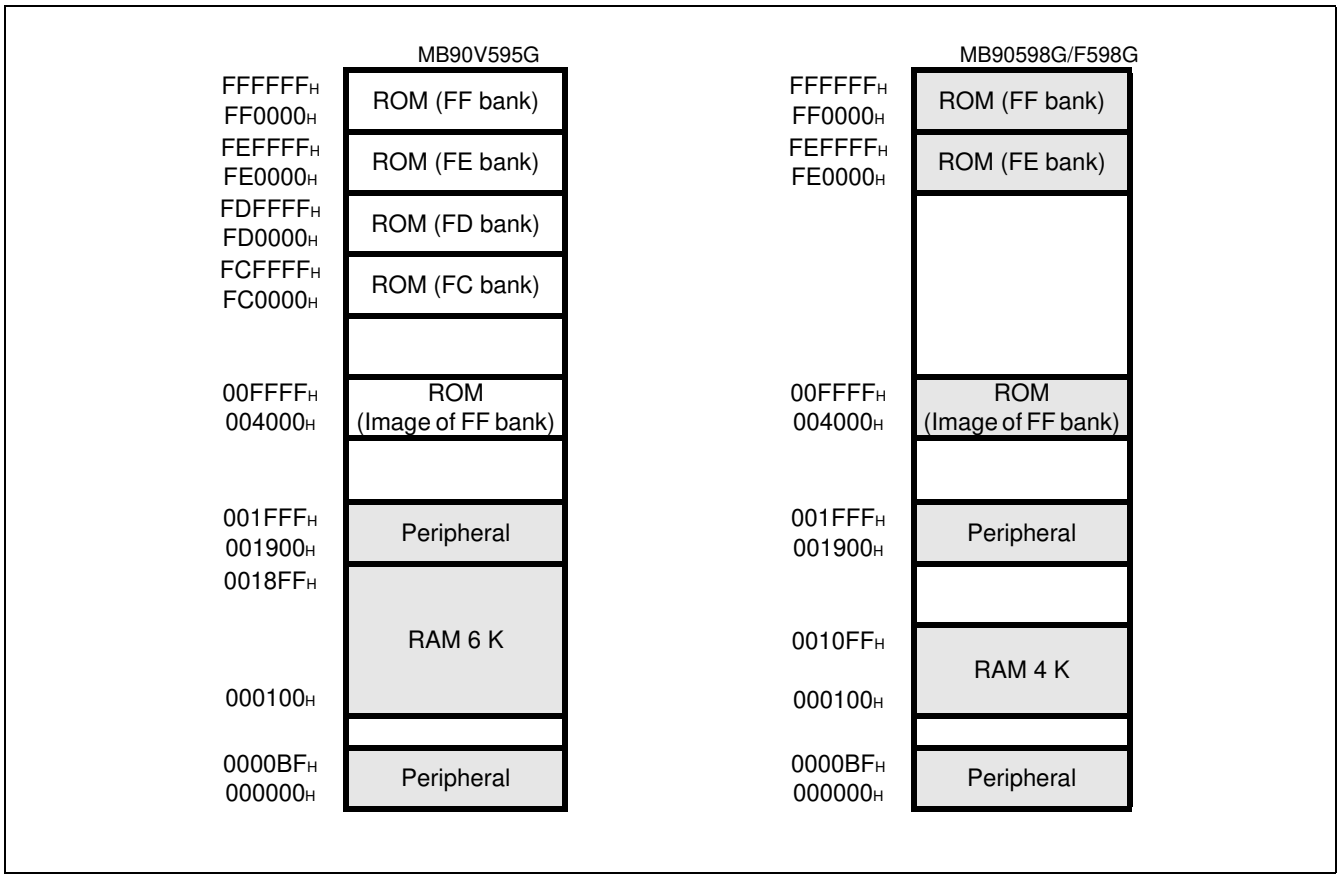
6. Block Diagram



7. Memory Space

The memory space of the MB90595G Series is shown below

Figure 1. Memory space map



Note: : The ROM data of bank FF is reflected in the upper address of bank 00, realizing effective use of the C compiler small model. The lower 16-bit of bank FF and the lower 16-bit of bank 00 are assigned to the same address, enabling reference of the table on the ROM without stating “far”.
For example, if an attempt has been made to access 00C000H , the contents of the ROM at FFC000H are accessed. Since the ROM area of the FF bank exceeds 48 Kbytes, the whole area cannot be reflected in the image for the 00 bank. The ROM data at FF4000H to FFFFFFH looks, therefore, as if it were the image for 004000H to 00FFFFH. Thus, it is recommended that the ROM data table be stored in the area of FF4000H to FFFFFFH.

8. I/O Map

Address	Register	Abbreviation	Access	Peripheral	Initial value
00_H	Port 0 Data Register	PDR0	R/W	Port 0	XXXXXXXX$_B$

■ Description for Read/Write
R/W : Readable/writable
R : Read only
W : Write only

■ Description of initial value
0 : the initial value of this bit is "0".
1 : the initial value of this bit is "1".
X : the initial value of this bit is undefined.
_ : this bit is unused. the initial value is undefined.

Note: : Addresses in the range of 0000$_H$ to 00FF$_H$, which are not listed in the table, are reserved for the primary functions of the MCU. A read access to these reserved addresses results in reading “X”, and any write access should not be performed.

9. Can Controller

The CAN controller has the following features:

- Conforms to CAN Specification Version 2.0 Part A and B
  - - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
  - 29-bit ID and 8-byte data
  - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
  - Two acceptance mask registers in either standard frame format or extended frame format
- Bit rate programmable from 10 kbps to 2 Mbps (when input clock is at 16 MHz)
