

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

MC10E411

5V ECL 1:9 Differential PECL/NECL RAMBus Clock Buffer

Description

The MC10E411 is a low skew 1-to-9 differential driver, designed with clock distribution in mind. The MC10E411's function and performance are similar to the popular MC10E111, with the added feature of 1.2 V output swings.

The output voltage swing of the E411 is larger than a standard ECL swing. The 1.2 V output swings provide a signal which can be AC coupled into RAMBus compatible input loads. The larger output swings are produced by lowering the V_{OL} of the device. With the exception of the lower V_{OL} , the E411 is identical to the MC10E111. Note that the larger output swings eliminate the possibility of temperature compensated outputs, thus the E411 is only available in the 10E style of ECL. In addition, because the V_{OL} is lower than standard ECL, the outputs cannot be terminated to -2.0 V. This data sheet provides a few termination alternatives.

The device TPD is affected by the quantity of output pairs terminated with minimum occurring with only one output pair and increasing about 10 – 20 ps for all output pairs. Relative skew distribution is not affected as more pairs are terminated, but the increased TPD does shift the entire distribution. Unused output pairs should be left unterminated (open) to reduce power and switching noise.

The V_{BB} pin, an internally generated voltage supply, is available to this device only. For single-ended input conditions, the unused differential input is connected to V_{BB} as a switching reference voltage. V_{BB} may also rebias AC coupled inputs. When used, decouple V_{BB} and V_{CC} via a 0.01 μ F capacitor and limit current sourcing or sinking to 0.5 mA. When not used, V_{BB} should be left open.

Features

- 200 ps Part-to-Part Skew
- 50 ps Output-to-Output Skew
- Differential Design
- V_{BB} Output
- Voltage Compensated Outputs
- PECL Mode Operating Range:
 $V_{CC} = 4.5$ V to 5.5 V with $V_{EE} = 0$ V
- NECL Mode Operating Range:
 $V_{CC} = 0$ V with $V_{EE} = -4.5$ V to -5.5 V
- Internal Input 50 k Ω Pulldown Resistors
- ESD Protection: Human Body Model; > 2 kV, Machine Model; > 200 V
- Meets or Exceeds JEDEC Spec EIA/JESD78 IC Latchup Test
- Moisture Sensitivity Level: Pb = 1; Pb-Free = 3
For Additional Information, see Application Note AND8003/D
- Flammability Rating: UL 94 V-0 @ 1.125 in, Oxygen Index: 28 to 34
- Transistor Count = 180 devices
- Pb-Free Packages are Available*

*For additional information on our Pb-Free strategy and soldering details, please download the ON Semiconductor Soldering and Mounting Techniques Reference Manual, SOLDERRM/D.

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 6 of this data sheet.

MC10E411

All V_{CC} and V_{CCO} pins are tied together on the die
 Warning: All V_{CC}, V_{CCO}, and V_{EE} pins must be externally connected to Power Supply to guarantee proper operation.

V_{BB}	Output Voltage Reference	3.62		3.73	3.65		3.75	3.69		3.81	V
V_{IHCMR}	Input HIGH Voltage Common Mode Range (Differential Configuration) (Note 3)	3.4		4.6	3.4		4.6	3.4		4.6	V
I_{IH}	Input HIGH Current			150			150			150	μA

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

1. Input and output parameters vary 1:1 with V_{CC} . V_{EE} can vary +0.5 V / -0.5 V.
2. Outputs are terminated through a 300 Ω resistor to V_{EE} .
3. V_{IHCMR} min and max vary 1:1 with V_{CC} .

Table 4. 10E SERIES NECL DC CHARACTERISTICS $V_{CCx} = 0.0\text{ V}$; $V_{EE} = -5.0\text{ V}$ (Note 4)

V_{PP}	Input Voltage Swing (Differential Configuration)	250		1000	250		1000	250		1000	mV
t_r/t_f	Output Rise/Fall Time (20%–80%)	275		600	275		600	275		600	ps

NOTE: Device will meet the specifications after thermal equilibrium has been established when mounted in a test socket or printed circuit board with maintained transverse airflow greater than 500 lfpm. Electrical parameters are guaranteed only over the declared operating temperature range. Functional operation of the device exceeding these conditions is not implied. Device specification limit values are applied individually under normal operating conditions and not valid simultaneously.

7. V_{EE} can vary +0.5 V / -0.5 V.

8. The differential propagation delay is defined as the delay from the crossing points of the differential input signals to the crossing point of the differential output signals.

9. The single-ended propagation delay is defined as the delay from the 50% point of the input signal to the 50% point of the output signal.

10. The setup time is the minimum time that \overline{EN} must be asserted prior to the next transition of IN/ \overline{IN} to prevent an output response greater than $\pm 75\text{ mV}$ to that IN/ \overline{IN} transition.

11. The hold time is the minimum time that \overline{EN} must remain asserted after a negative going IN or a positive going \overline{IN} to prevent an output response greater than $\pm 75\text{ mV}$ to that IN/ \overline{IN} transition.

12. The release time is the minimum time that \overline{EN} must be deasserted prior to the next IN/ \overline{IN} transition to ensure an output response that meets the specified IN to Q propagation delay and output transition times.

13. The within-device skew is defined as the worst case difference between any two similar delay paths within a single device.

PACKAGE DIMENSIONS

PLCC-28
FN SUFFIX
PLASTIC PLCC PACKAGE
CASE 776-02
ISSUE E

NOTES:

- DATUMS -L-, -M-, AND -N- DETERMINED WHERE TOP OF LEAD SHOULDER EXITS PLASTIC BODY AT MOLD PARTING LINE.
- DIMENSION G1, TRUE POSITION TO BE MEASURED AT DATUM -T-, SEATING PLANE.
- DIMENSIONS R AND U DO NOT INCLUDE MOLD FLASH. ALLOWABLE MOLD FLASH IS 0.010 (0.250) PER SIDE.
- DIMENSIONING AND TOLERANCING PER ANSI Y14.5M, 1982.
- CONTROLLING DIMENSION: INCH.
- THE PACKAGE BOTTOM MAY BE SMALLER THAN THE PACKAGE TOP BY UP TO 0.012 (0.300). DIMENSIONS R AND U ARE DETERMINED AT THE OUTERMOST EXTREMES OF THE PLASTIC BODY EXCLUSIVE OF MOLD FLASH, TIE BAR BURRS, GATE BURRS AND INTERLEAD FLASH, BUT INCLUDING ANY MISMATCH BETWEEN THE TOP AND BOTTOM OF THE PLASTIC BODY.
- DIMENSION H DOES NOT INCLUDE DAMBAR PROTRUSION OR INTRUSION. THE DAMBAR PROTRUSION(S) SHALL NOT CAUSE THE H DIMENSION TO BE GREATER THAN 0.037 (0.940). THE DAMBAR INTRUSION(S) SHALL NOT CAUSE THE H DIMENSION TO BE SMALLER THAN 0.025 (0.635).
