

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

MBC13917

MBC13917

General Purpose SiGe:C RF Cascode Low Noise Amplifier

Package Information

Plastic Package: MLPD-6
1.5 mm x 2.0 mm
Case: 2129-01

Ordering Information

Device	Device Marking or Operating Temperature Range	Package
MBC13917EP	917	MLPD-6

1 Introduction

The MBC13917 is a cost-effective, high isolation amplifier fabricated with an advanced RF BiCMOS process using the SiGe:C module. This is the leadless package version of the MBC13916 device.

The MBC13917 is designed for a wide range of general purpose RF applications and has excellent high frequency gain and noise figure. On-chip bias circuitry sets the bias point while matching is accomplished off-chip, affording the maximum in application flexibility.

1.1 Features

The MBC13917 has the following features:

- Usable frequency range = 100 MHz to 2500 MHz
- 27 dB typical gain at 434 MHz, Vcc = 2.7V
- NF_{min} (device level) = 0.95 dB @ 434 MHz
- NF_{min} (device level) = 0.95 dB @ 900 MHz
- 6.5 dBm typical output power at -10 dBm Pin at 900 MHz, Vcc = 2.7V

© Freescale Semiconductor, Inc., 2006–2010. All rights reserved.

- 46 dB typical reverse isolation (device level) at 434 MHz, Vcc = 2.7V
- 4.7 mA typical bias current at Vcc = 2.7V
- 2.7V to 3.3V supply
- Industry standard MLPD-6 leadless package
- Available only in tape and reel packaging

1.2 Applications

Ideal for use in any RF product that operates between 100 MHz and 2.5 GHz, and may be applied in:

- Buffer amplifiers
- Mixers
- IF amplifiers
- Voltage controlled oscillators (VCOs)
- Low power amplifiers
- Gain block in RF end products
- Smart metering
- Industrial—scientific and medical (ISM)
- Consumer—WLAN, 802.11 b/g
- Auto—TPMS, RKE, GPS, active antennas, wireless security

[Figure 1](#) shows a simplified block diagram of the MBC13917 with the pinouts and location of the Pin 1 designator on the package.

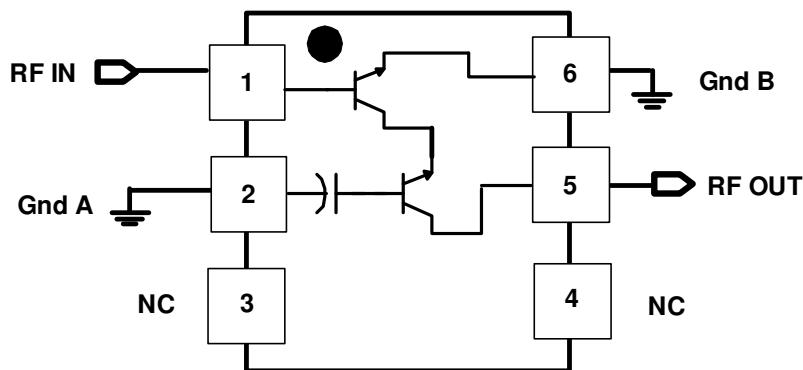

Figure 1. Functional Block Diagram

2 Electrical Characteristics

Table 1 lists the recommended operating conditions of the MBC13917 device.

Table 1. Recommended Operating Conditions

Characteristic	Symbol	Min	Typ	Max	Unit
RF Frequency	f_{RF}	100	—	2500	MHz
Supply Voltage	V_{CC}	2.1	2.7	3.3	Vdc

Table 2. lists the maximum ratings for the device.

Table 2. Maximum Ratings ($T_A = 25^\circ\text{C}$, unless otherwise noted)

Rating	Symbol	Value	Unit
Supply Voltage	V_{CC}	3.5	Vdc
RF Input Power	P_{RF}	10	dBm
Power Dissipation	P_{DIS}	100	mW
Supply Current	I_{CC}	20	mA
Thermal Resistance, Junction to Case	$R_{\theta JC}$	400	°C/W
Storage Temperature Range	T_{stg}	-65 to 150	°C
Operating Ambient Temperature Range	T_A	-40 to 85	°C
Operating Case Temperature	T_c	-40 to 100	°C

Note: Maximum Ratings and ESD

1. Maximum Ratings are those values beyond which damage to the device may occur.
Functional operation should be restricted to the limits in the Recommended Operating Conditions and Electrical Characteristics tables.
2. ESD (electrostatic discharge) immunity meets Human Body Model (HBM) ≤ 550 V and Machine Model (MM) ≤ 50 V. Additional ESD data is available upon request.

Table 3 lists electrical characteristics associated with noise performance measured in a 50Ω system. Additional noise parameters are listed in **Table 9**.

**Table 3. Device Level Characteristics
($V_{CC} = 2.7$ V, $T_A = 25^\circ\text{C}$, measured in S-parameter test fixture, unless otherwise noted)**

Characteristic	Symbol	Min	Typ	Max	Unit
Insertion Gain $f = 350$ MHz $f = 430$ MHz $f = 900$ MHz $f = 1900$ MHz	IS21I See note below				dB
		21.7	23.7	—	
		21.4	23.4	—	
		18.7	20.7	—	
		12.6	14.6	—	

Electrical Characteristics

Table 3. Device Level Characteristics (continued)
(V_{CC} = 2.7V, T_A = 25°C, measured in S-parameter test fixture, unless otherwise noted)

Characteristic	Symbol	Min	Typ	Max	Unit
Maximum Stable Gain and Maximum Available Gain (Note1)	MSG, MAG				
f= 350 MHz		34	36.4	—	dB
f= 430 MHZ		33.2	35.6	—	
f= 900 MHz		26.5	28.9	—	
f= 1900 MHZ		15	17.6	—	
Minimum Noise Figure	NF _{min}				
f= 350 MHz		—	1.0	1.35	dB
f= 430 MHZ		—	0.95	1.30	
f= 900 MHz		—	0.95	1.30	
f= 1900 MHz		—	1.5	1.85	
Output Third Order Intercept	OIP3				
f= 350 MHz		7.7	9.7	—	dBm
f= 430 MHZ		8.3	10.3	—	
f= 900 MHz		11.3	13.3	—	
f= 1900 MHz		11.6	13.6	—	
Reverse Isolation	S12				
f= 350 MHz		-49	-53	—	dB
f= 430 MHZ		-48	-52	—	
f= 900 MHz		-42	-46	—	
f= 1900 MHz		-40	-44	—	
Note: Maximum Available Gain and Maximum Stable Gain are defined by the K factor as follows: if K>1, MAG=IS21/S12(K ± SqRt(K ² -1)) if K<1, MSG=IS21/S12					

Table 4 lists the electrical characteristics measured on evaluation boards tuned for typical application frequencies. Further details on the application circuits are shown in [Section 4, “Application Circuits”](#) and details on the boards are shown in [Section 5, “Printed Circuit Board and Bill of Materials.”](#)

Table 4. Electrical Characteristics Measured in Frequency-Specific Tuned Circuits
(V_{CC} = 2.7V, T_A = 25°C unless otherwise noted)

Characteristic	Symbol	Min	Typ	Max	Unit

Scattering and Noise Parameters

Figure 2 through Figure 5 are the constant noise figure and gain circles with input and output stability regions shown on Smith charts. Gamma opt, noise resistance and stability at the frequency are shown for two values of the external bias resistor at 350 MHz, 450 MHz, 900 MHz, and 1900 MHz.

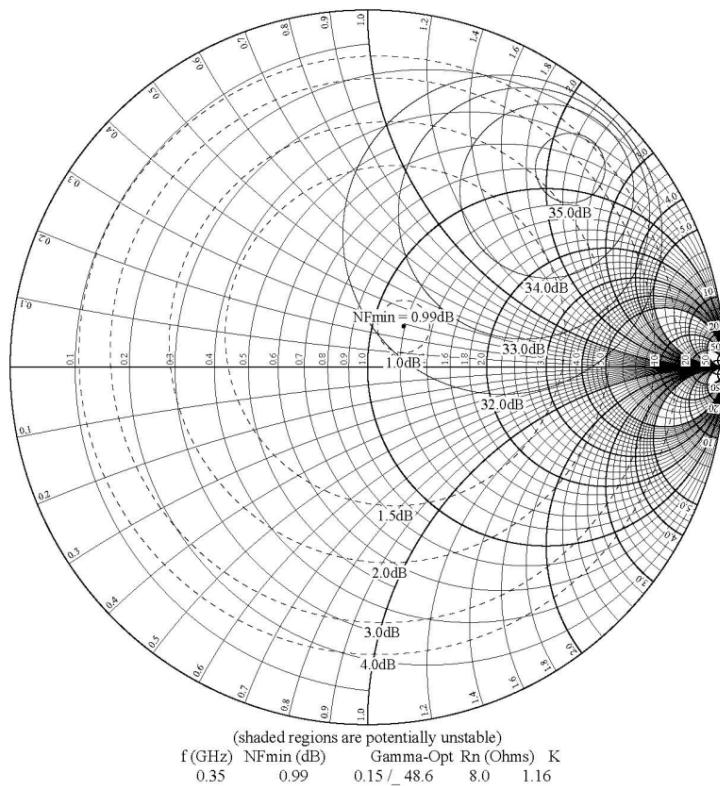

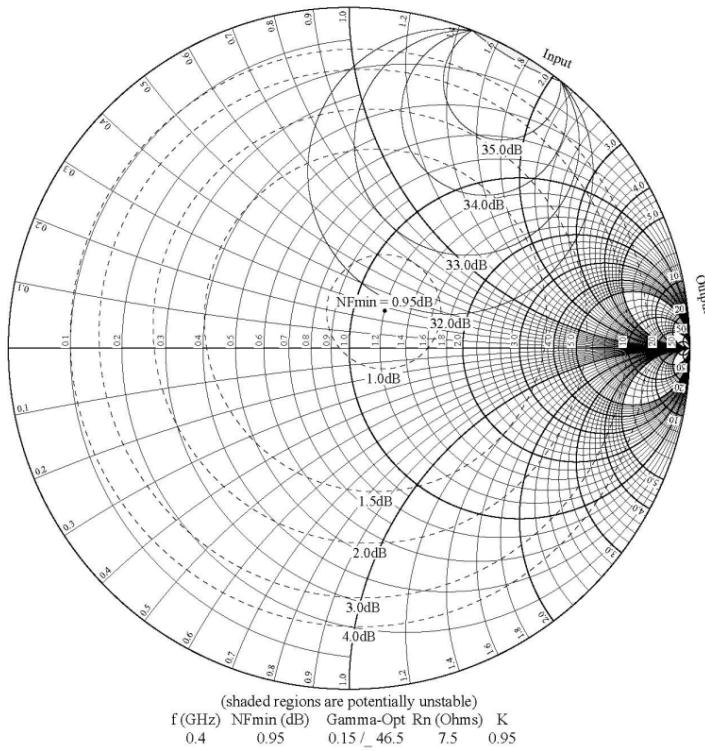

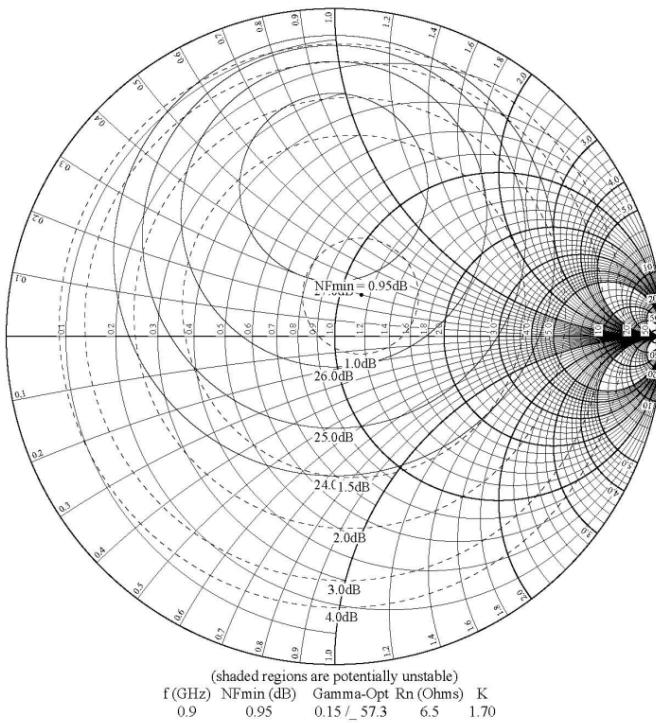

Figure 2. Constant Noise Figure and Gain Circles: 350 MHz

**Figure 3. Constant Noise Figure and Gain Circles: 450 MHz****Figure 4. Constant Noise Figure and Gain Circles: 900 MHz**

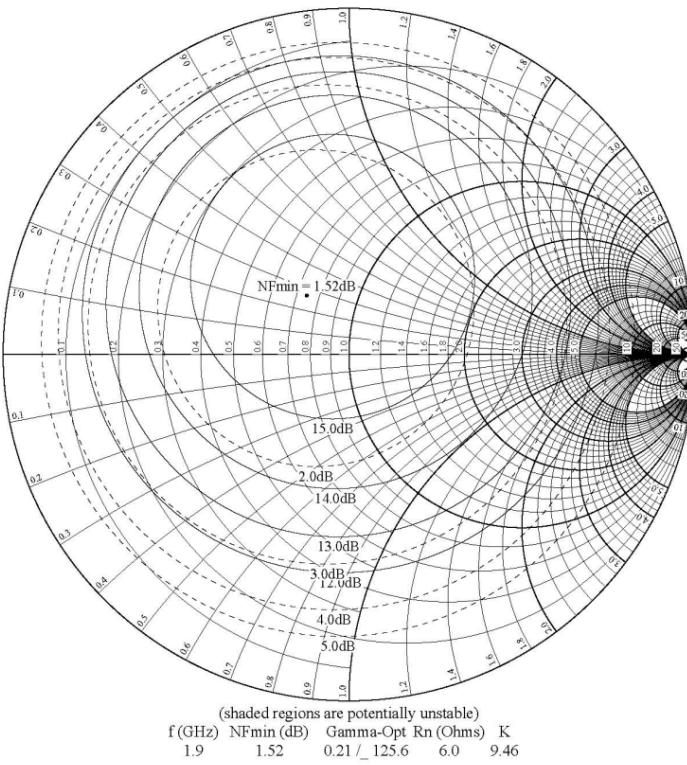

**Figure 5. Constant Noise Figure and Gain Circles: 1900 MHz**

Figure 6 shows minimum noise figure and associated gain versus frequency for the packaged device in a $50\ \Omega$ system at four bias levels.

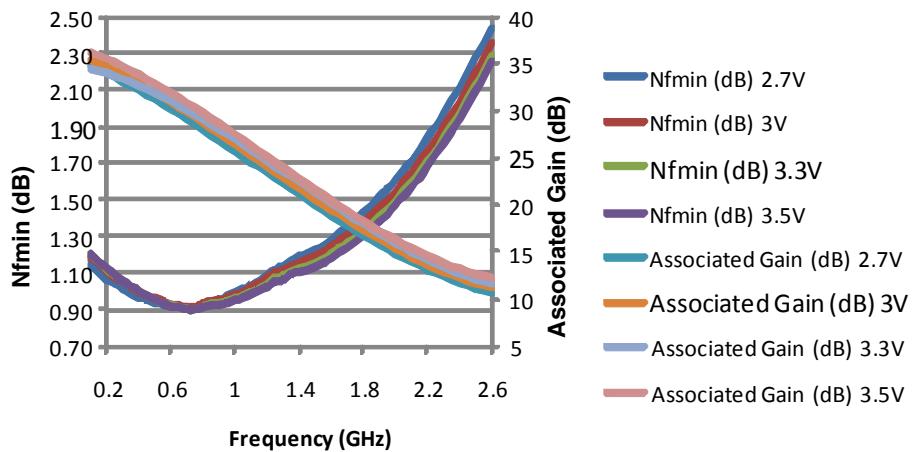

**Figure 6. Minimum Noise Figure and Associated Gain vs. Frequency at 25°C**

Figure 7 shows minimum noise figure versus frequency over temperature for the packaged device in a $50\ \Omega$ system.

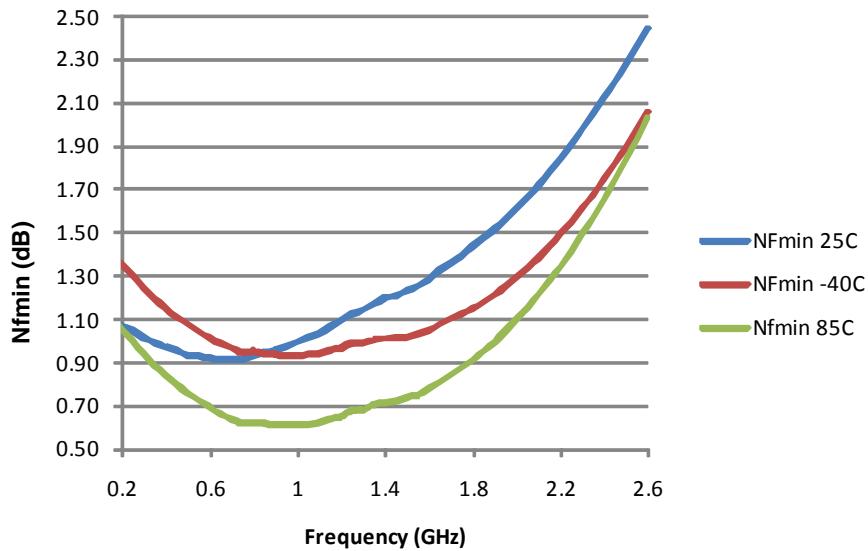

Figure 7. Minimum Noise Figure vs. Frequency and Temperature

Figure 8 shows maximum stable and available gain and forward insertion gain for the packaged device in a $50\ \Omega$ system over frequency.

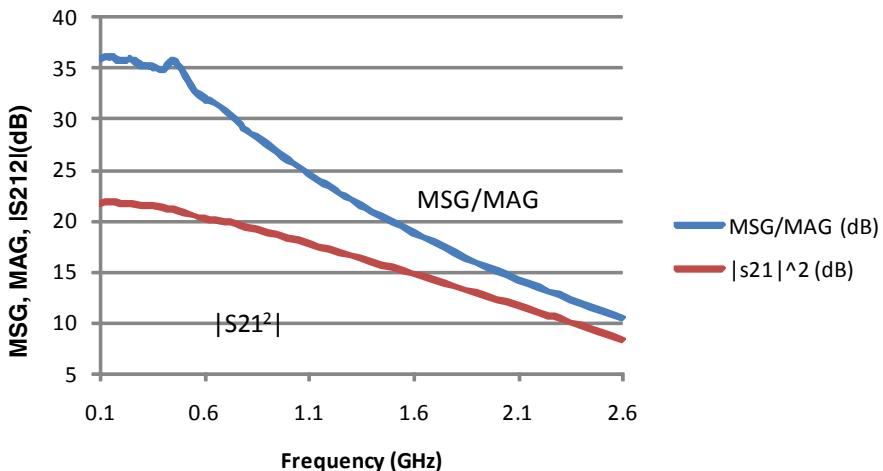

Figure 8. Maximum Stable Gain/Maximum Available Gain and Forward Insertion Gain vs. Frequency at 25°C

Scattering and Noise Parameters

Figure 9 shows power out versus power in the 350 MHz application circuit at four bias levels.

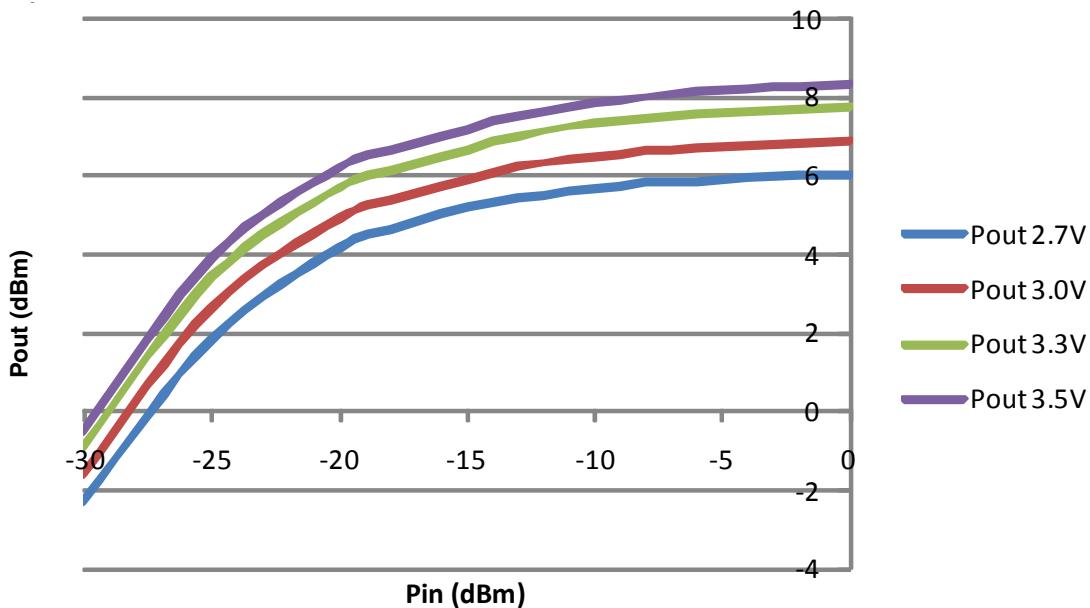

Figure 9. Output Power vs. Input Power for 350 MHz at 25°C

Figure 10 shows power out versus power in the 900 MHz application circuit at four bias levels.

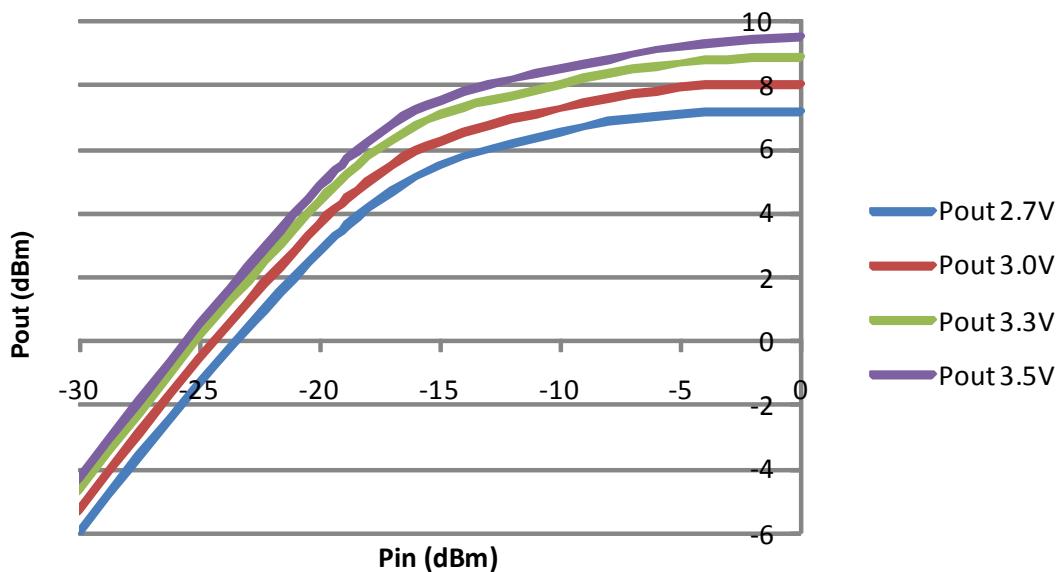

Figure 10. Output Power vs. Input Power for 900 MHz at 25°C

Figure 11 shows power out versus power in the 1900 MHz application circuit at four bias levels.

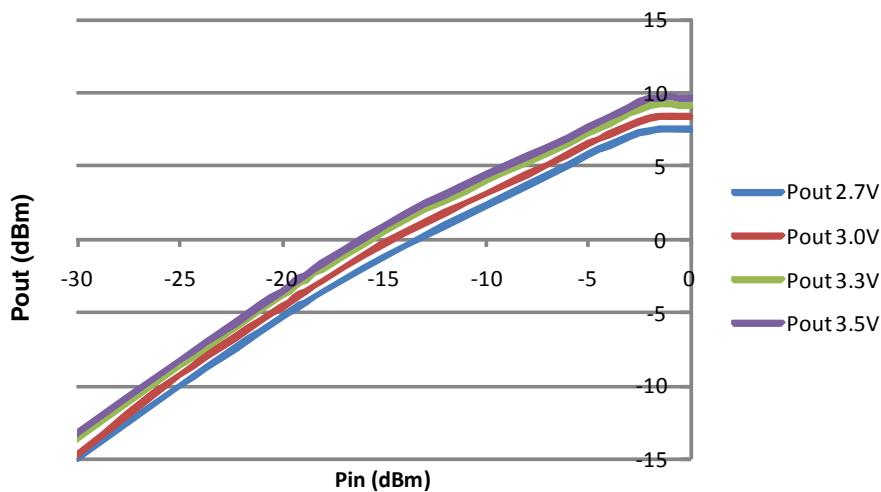

Figure 11. Output Power vs. Input Power for 1900 MHz at 25°C

Figure 12 shows supply current versus power in and bias in the 350 MHz application circuit at four bias levels.

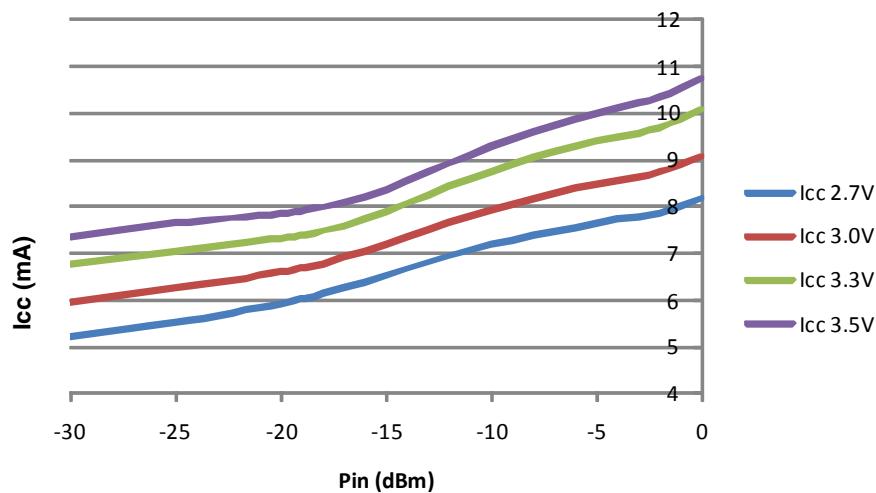

Figure 12. Supply Current vs. Input Power for 350 MHz at 25°C

Scattering and Noise Parameters

Figure 13 shows supply current versus power in and bias in the 900 MHz application circuit at four bias levels.

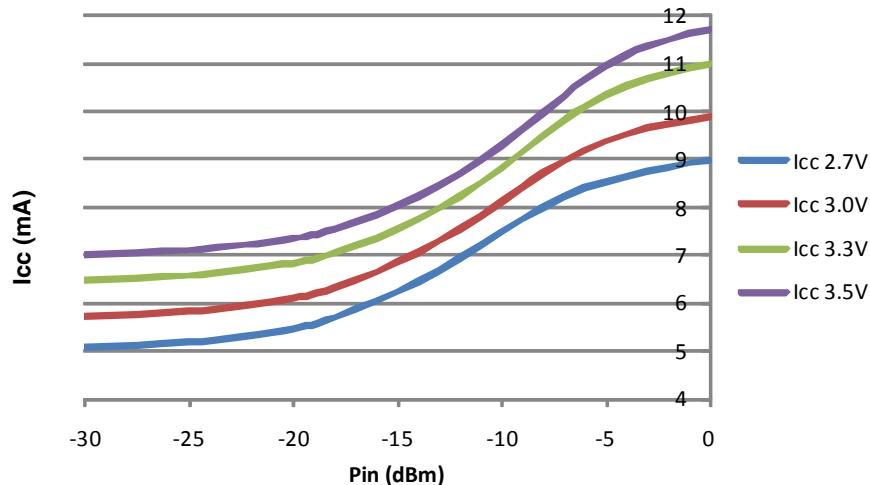

Figure 13. Supply Current vs. Input Power for 900 MHz at 25°C

Figure 14 shows supply current versus power in and bias in the 1900 MHz application circuit at four bias levels.

4 Application Circuits

The MBC13917 LNA is designed for applications in the 100 MHz to 2.5 GHz range. In the application examples included in this section, a balance is made between competing RF performance characteristics of I_{cc} , NF, gain IP3, and return losses to demonstrate overall performance. Conjugate matching is not used for the input or output.

Instead, matching that achieves a tradeoff in RF performance qualities is shown. For a particular application or specification requirement, the matching can be changed to achieve enhanced performance of one parameter (generally at the expense of other parameters). Application information for 350 MHz, 434 MHz, 900 MHz and 1900 MHz circuits is provided.

- [Section 3, “Scattering and Noise Parameters”](#) provides Smith charts with gain and noise circles for each application frequency.
- [Section 5, “Printed Circuit Board and Bill of Materials”](#) provides the evaluation board layout and Bill of Material for the circuits.

4.1 350 MHz–370 MHz Applications

This application circuit was designed to provide $NF = 2.1$ dB, $S21$ gain > 27 dB for 350 MHz. Return losses and gain are similar for 350 MHz–370 MHz.

- Component C4 has the greatest impact on return losses, NF, and gain, by moving the input and output on the Smith chart.
- Component L1 can be lowered to improve NF, by trading off S11 return loss.
- Gain, OIP3 and P1dB_{output} can be increased, by decreasing the resistor value at the output (without impacting NF or return losses).

This application is intended for a range of designs, including TETRA land mobile and base station transceivers. Typical performance that can be expected from this circuit at 2.7V is listed in [Table 10](#).

[Figure 16](#) is the 350 MHz–370 MHz application schematic with package pinouts and the circuit component topology.

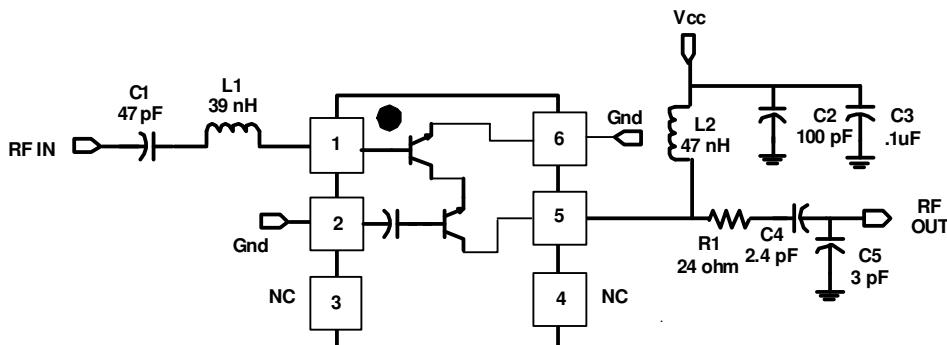

Figure 16. 350 MHz–370 MHz Application Schematic

Table 10 provides the electrical characteristics for the 350 MHz–370 MHz application.

Table 10. Typical 350–370 MHz Evaluation Board Performance

	Characteristic	Symbol	Min	Typ	Max	Unit
350 MHz (Figure 16) Vcc 2.7V $T_A = 25^\circ\text{C}$	Supply Current	I_{cc}	—	4.7	5.6	mA
	RF Gain	G	26.6	27.7	—	dB
	Noise Figure	NF	—	2.1	2.5	dB
	Output 3rd Order Intercept Point	OIP3	8	9.5	—	dBm
	Power Output at 1 dB Gain Compression	$P_{1\text{dBoutput}}$	-1	1	—	dBm
	Input Return Loss	S11	—	-8	-7	dB
	Small Signal Gain	S21	26	27	—	dB
	Reverse Isolation	S12	—	-47	-46	dB
	Output Return Loss	S22	—	-9	-7.5	dB

370 MHz (Figure 16) Vcc 2.7V $T_A = 25^\circ\text{C}$	Supply Current	I_{cc}	—	4.7	5.6	mA
	RF Gain	G	27.5	28.6	—	dB
	Noise Figure	NF	—	2.2	2.6	dB
	Output 3rd Order Intercept Point	OIP3	9.2	10.7	—	dBm
	Power Output at 1 dB Gain Compression	$P_{1\text{dBoutput}}$	0.7	2.2	—	dBm
	Input Return Loss	S11	—	-12	-10	dB
	Small Signal Gain	S21	27	28.5	—	dB
	Reverse Isolation	S12	—	-47	-46	dB
	Output Return Loss	S22	—	-12	-10	dB

350 MHz (Figure 16) Vcc 2.7V $T_A = 85^\circ\text{C}$	Supply Current	I_{cc}	—	5.3	6.2	mA
	RF Gain	G	25.6	26.7	—	dB
	Noise Figure	NF	—	2.4	2.75	dB
	Output 3rd Order Intercept Point	OIP3	9.2	10.7	—	dBm
	Power Output at 1 dB Gain Compression	$P_{1\text{dBoutput}}$	0	1.8	—	dBm
	Input Return Loss	S11	—	-8	-7	dB
	Small Signal Gain	S21	25.5	26.6	—	dB
	Reverse Isolation	S12	—	-47.5	-46.5	dB
	Output Return Loss	S22	—	-9.7	-8	dB
