## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Analog, Mixed-Signal and Power Management

## MC33903/4/5

## System Basis Chip Gen2 with High Speed CAN and LIN Interface

## Overview

The MC33903/4/5 is the second generation family of System Basis Chips, which combine several features and enhance present module designs. The device works as an advanced power management unit for the MCU and additional integrated circuits such as sensors and CAN transceivers. It has a built-in enhanced high speed CAN interface (ISO11898-2 and -5), with local and bus failure diagnostics, protection, and fail safe operation mode. The SBC may include one or two LIN 2.1/J2602-2 interfaces with LIN master terminal outputs. It includes wake-up input pins than can also be configured as output drivers for flexibility.
This device implements multiple Low Power modes with very low-current consumption. In addition, the device is part of a family concept where pin compatibility, among the various devices with and without LIN interfaces, adds versatility to module design.
The MC33903/4/5 also implements an innovative and advanced fail-safe state machine and concept solution. This family of devices are supported by an enablement ecosystem that includes an evaluation board, software interface, EMC/ESD conformance reports and training material that allows a faster time to market and eases your designs.

MC33903/4/5 Block Diagram

## Power Management Scalability

- MCU power supply ( $\mathrm{V}_{\mathrm{DD}}$ ): 5.0 or $3.3 \mathrm{~V} /$ 150 mA (power split option for scalable needs - up to 300 mA )
- 5.0 or 3.3 V voltage regulator ( $\mathrm{V}_{\mathrm{AUX}}$ ) for auxiliary loads
- Dedicated 5.0 V voltage regulator (5 V CAN) for High Speed CAN

## Functional Safety

- Innovative cranking pulse management during $\mathrm{V}_{\mathrm{DD}}$ low
- Fail safe \& configurable state machine
- Enhanced protections and diagnostics

## Energy Savings

- Ultra low power modes (typ $15 \mu \mathrm{~A}$ with $V_{D D}$ off)
- Innovative Wake-up management and cyclic sense capability

## Robust Physical Layers

- Certification to LIN 2.1, J2602-2, and ISO11898-2-5 standards
- Successfully certified for stringent EMC, ISO, and ESD standards

## Easy to Use

- Ecosystem to lower development time and simplify access
- Debug mode to save time during application development

## Flexibility \& Compatibility:

- Selectable parameters (RST time, W/D type, VDD under-voltage threshold, $\mathrm{V}_{\text {AUX }}$ 3.3 or 5.0 V )
- 1 or 2 LIN options (33903S, 33905S and 33903D, 33905D)
- Scalable (I/O pins configurable as wake-up inputs or output LIN master terminations)

## IDEAL COMPANION CHIP FOR MCU IN BODY, SAFETY, AND POWERTRAIN APPLICATIONS

| Segment | Applications | Proposed FSL MCU |
| :---: | :---: | :---: |
| Body |  |  |
|  | Body Controller Gateway | S12x, MPC560x |
|  | Seat Module <br> Door Module <br> Lighting Control Module <br> Column Module <br> HVAC <br> Cluster | S12x, MPC560x, S08x |
| Safety \& Chassis |  |  |
|  | Seat Belt Pre-tensioner Electric Parking Brake Steering | S12x, MPC560x |
| Power Train |  |  |
|  | Fuel Pump Water Pump Glow Plug | S12x, S08x |
|  | Engine Management Low End | S12x, MPC563x |

| Key Characteristics |  |
| :---: | :---: |
| Parameter | Characterization |
| MCU Linear $\mathrm{V}_{\text {REG }}$ (LDO) | 5.0 / 3.3 V |
| Output Current | (300 mA for 33903D/S, 33904, 33905D/S with optional external PNP implementation) |
| Bus Output | CAN |
| 33903D/S, 33905D/S only | LIN |
| Data Rate |  |
| CAN | $40 \mathrm{kB} / \mathrm{s}-1.0 \mathrm{MB} / \mathrm{s}$ |
| LIN | $10.4 \mathrm{kB} / \mathrm{s}-20 \mathrm{kB} / \mathrm{s}$ (100 kB/s in fast mode) |
| Low Power $\mathrm{V}_{\mathrm{DD}}$ OFF/ $\mathrm{V}_{\mathrm{DD}}$ ON Current | 15/25 $\mu \mathrm{A}$ |
| ESD - Module Level (CAN and LIN) | $\pm 8000 \mathrm{~V}$ |
| Operating Voltage | 5.5-28 V |
| Maximum Input Voltage | 27 VDC, 40 V (Load Dump) |
| Operating Temperature | $-40^{\circ} \mathrm{C}<\mathrm{T}_{\mathrm{A}}<125^{\circ} \mathrm{C}$ |

MC33905D Simplified Application Drawing

MC33905S Simplified Application Drawing

## Features

- LDO Linear Power Supply 5.0 or 3.3 V , up to 300 mA with an optional external ballast transistor
- LDO Auxiliary Regulator with ballast transistor (5.0 / 3.3 V configurable)
- Under voltage management for cranking
- Internal 5.0 V regulator for CAN driver supply
- Low current consumption in sleep mode
- Fail safe state machine linked with SAFE pin
- Secured SPI with Watchdog capability
- High precision $\mathrm{V}_{\text {SUP }}$ sense monitoring
- Multiple Analog sensing to 1 MUX output
- Triple configurable I/O with W/U feature
- " $B$ " versions are recommended for new designs. Changes implemented on " $B$ " versions: resolved $\mathrm{V}_{\text {SUP }}$ slow ramp up behavior, enhanced device current consumption, and improved oscillator
- CAN, ISO11898-2 and 11898-5 compliant
- 1 LIN transceiver - 2.0, 2.1, and SAE J2602-2 compliant

MC33904 Simplified Application Drawing

## Features

- LDO Linear Power Supply 5.0 or 3.3 V , up to 300 mA with an optional external ballast transistor
- LDO Auxiliary Regulator with ballast transistor (5.0 / 3.3 V configurable)
- Under-voltage management for cranking
- Internal 5.0 V regulator for CAN driver supply
- Low current consumption in sleep mode
- Fail safe state machine linked with SAFE pin
- Secured SPI with Watchdog capability
- High precision $\mathrm{V}_{\text {SUP }}$ sense monitoring
- Multiple Analog sensing to 1 MUX output
- Quad configurable I/O with W/U feature
- "B" versions are recommended for new designs. Changes implemented on "B" versions: resolved $\mathrm{V}_{\text {SUP }}$ slow ramp up behavior, enhanced device current consumption, and improved oscillator
- CAN transceiver: ISO11898-2 and 11898-5 compliant

MC33903 Simplified Application Drawing

## Features

- LDO Linear Power Supply 5.0 or 3.3 V
- $\mathrm{V}_{\mathrm{DD}}$ does not allow usage of an external PNP on the 33903. Output current limited to 150 mA
- Under-voltage management for cranking
- Internal 5.0 V regulator for CAN driver supply
- Low current consumption in sleep mode
- Fail safe state machine linked with SAFE pin
- Secured SPI with Watchdog capability
- Configurable I/O with W/U feature
- "B" versions are recommended for new designs. Changes implemented on " B " versions: resolved $\mathrm{V}_{\text {SUP }}$ slow ramp up behavior, enhanced device current consumption, and improved oscillator
- CAN transceiver: ISO11898-2 and 11898-5 compliant

MC33903, MC33904, AND MC33905 KEY FEATURES AND BENEFITS

| Features | Benefits |  |
| :--- | :--- | :--- |
| Ecosystem | - Faster time to market. |  |
|  | Easy-to-Use Ecosystem | - EVB + SW interface to ease SBC usage \& programming. |
|  | - Electrical and EMC/ESD conformance reports. |  |
|  | - Training material. |  |

## Certification and Car OEM Approval Process

- LIN and CAN HS P/L meets conformance tests and EMC/ESD standard requirements to secure the customer design

## Questions

- Are you looking for an automotive certified High Speed CAN and LIN Physical Layer integrated on a single chip SBC?
- What is the maximum current capability of your MCU?
- Do you need to implement very low application quiescent current?
- How many wake-up sources are required by your system?
- Do you need to monitor bus failures during network communications?
- What battery voltage range is required by your system? What is the application behavior expected during cranking pulse?
- Do you need continuous system monitoring (temperature, battery voltage, inputs signals,...)?
- What are the safety level requirements of your application? Do you need external components to monitor your MCU (watchdog,...)?
- How many regulator outputs, and what logic voltage levels are required by your system (3.3 or 5.0 V )?

EK SUFFIX (PB-FREE) 32-PIN SOICW-EP 98ASA10556D

Freescale Semiconductor is a leading provider for over 25 years of high-performance products using SMARTMOS technology that combines digital, power and standard analog functions. The company supplies analog and power management ICs for the automotive, consumer, networking and industrial markets. Freescale's analog and power ICs complement our broad portfolio of micro controllers, microprocessors, ZigBee® technology, digital signal processors, sensors, with development tools and support to provide system solutions to customers.
