

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

High Speed Ultrasound Beamforming Source Driver

Features

- ▶ High resolution transmitting waveform
- ▶ Up to 3.0A push-pull source-driving current
- ▶ 230V_{P-P} maximum output, uses two DN2625 FETs
- ▶ Angle vector beamforming I-Q switcher matrix
- ▶ 8-bit apodization DAC and 7.5° angular resolution
- ▶ Flexible frequency-resolution trade-off
- ▶ Programmable aperture windowing
- ▶ 250MHz maximum sampling rate
- ▶ 25MHz ultrasound maximum frequency
- ▶ PWM modulation push-pull current source
- ▶ Focusing phase adjustment & chirp waveform
- ▶ Fast SPI interface
- ▶ 2.5V CMOS logic interface
- ▶ +5.0V single power supply
- ▶ Low second order harmonic distortions

Applications

- ▶ Medical ultrasound imaging transmit beamforming
- ▶ High resolution NDT and Sonar phase arrays
- ▶ HIFU transducer phase arrays beamforming and focus scanning
- ▶ Piezoelectric & MEMS transducer waveform drivers
- ▶ High speed, high voltage, arbitrary waveform generator

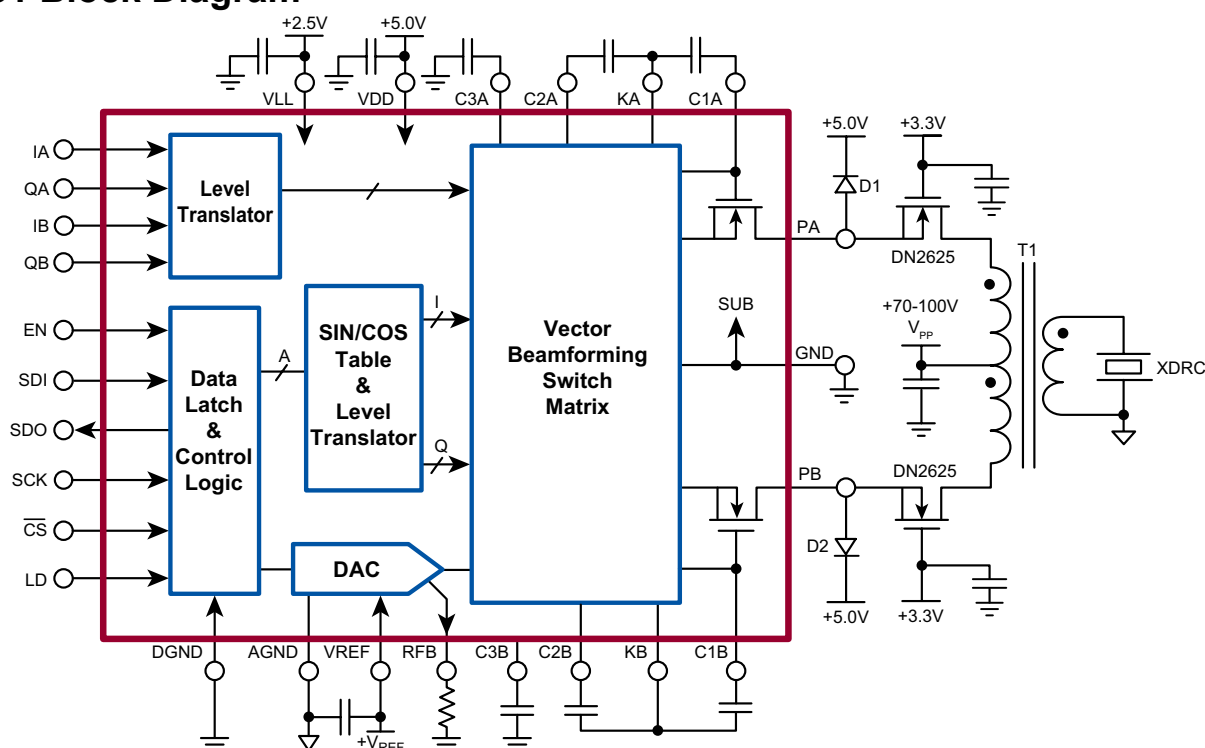

General Description

The MD2131 is a high-speed, arbitrary waveform, push-pull source driver. It is designed for medical ultrasound imaging and HIFU beamforming applications. It also can be used in NDT, Sonar and other ultrasound phase-array focusing beamforming applications.

The MD2131 consists of CMOS digital logic input circuits, an 8-bit current DAC for waveform amplitude control, and four PWM current-sources. These current sources are constructed with the high-speed, in-phase and quadrature current-switch matrix and the built-in sine and cosine angle-to-vector look-up table. The angular resolution of the vector table is 7.5° per step, with a total range of 48 steps. There are four logic input signals to control the in-phase and quadrature PWM push-pull current-source's output timing, frequency, cycle in the burst and waveform envelope.

The MD2131's output stage is designed to drive two DN2625 depletion N-type MOSFETs. The MOSFET drains are connected to a center-tap ultrasound frequency pulse transformer. The secondary winding of the transformer can connect to the ultrasound piezo or capacitive transducer via a cable with a good impedance match. The MD2131 has a high-speed, SPI-compatible interface to achieve per-scan-line fast updating of the data register for changing the beamforming phase angles and apodization amplitudes.

In-Phase and Quadrature Output Current Equations

The in-phase and quadrature phase output sinking current magnitudes, I_i and I_q , can be calculated by the following equations:

$$I_i = \frac{24 \cdot V_{REF} \cdot DAC \cdot (2^6 - 1) \cdot \cos(\alpha)}{9 \cdot R_{FB}}$$

$$I_q = \frac{24 \cdot V_{REF} \cdot DAC \cdot (2^6 - 1) \cdot \sin(\alpha)}{9 \cdot R_{FB}}$$

Where the V_{REF} is the voltage reference, DAC is the decimal value of the data in the DAC register, R_{FB} is the setting resistor value in ohms, and α is the value of the vector angle in degrees.

The absolute values of the results from the equations represent the magnitude of the output sinking current. The plus or minus sign of the results indicate the current flow in to the output port PA or PB, respectively. Note that the maximum full scale of pulse current at PA or PB port only can be obtained at DAC = 255, $V_{REF} = 2.5V$, $R_{FB} = 50k\Omega$, $\alpha = 45^\circ$ and IA = QA = Hi or IB = QB = Hi conditions.
