## Data Sheet

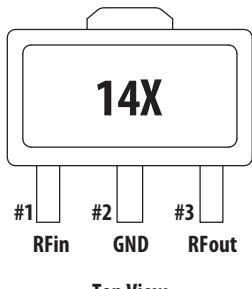

### Description

Avago Technologies MGA-31489 is a high performance Driver Amplifier MMIC, housed in a standard SOT-89 plastic package. The device features flat high gain with excellent input and output return loss, as well as superior linearity performance. The device can be easily matched to obtain desired performance.

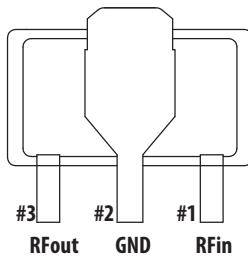

MGA-31489 is especially ideal for 50 Ω wireless infrastructure application within the 1.5 GHz to 3 GHz frequency range applications. With high IP3 and low noise figure and wideband operation, the MGA-31489 may be utilized as a driver amplifier in the transmit chain and as a second stage LNA in the receiver chain.

This device uses Avago Technologies proprietary 0.25 μm GaAs Enhancement mode PHEMT process.

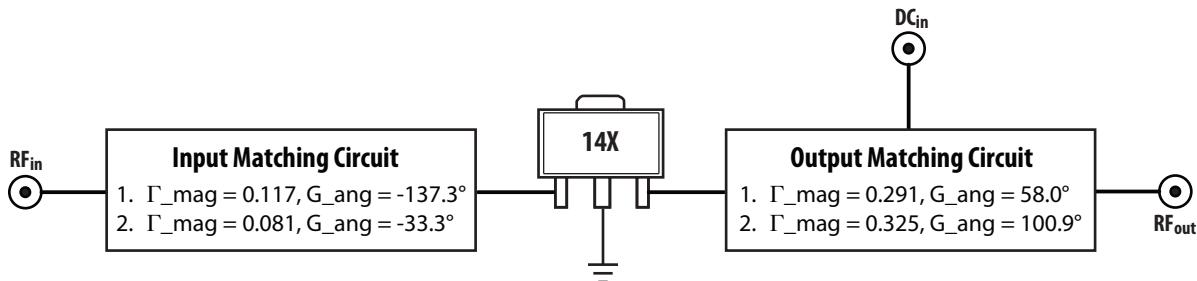

Figure 27. Input and output tuned Gamma location for 1900MHz<sup>(1)</sup> and 2500MHz<sup>(2)</sup>

For best performance, MGA-31489 is an input and output prematched driver amplifier. To bias MGA-31489, a +5V supply (Vdd) is connected to the output pin through a RF choke, L1 (which isolates the inband signal from the DC supply). The bypass capacitor helps to eliminate out of low band frequency signals from the power supply, C2 and C3. Blocking capacitors are required for its input (C7) and output (C8), to isolate the supply voltage from preceding and succeeding circuits. C7 and L3 also play a part in input tuning to improve input return loss while L1 and C8 help in tuning output. The recommended output tuning is for achieving best OIP3, while meeting typical specifications for other parameters.
