

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## GaAs Enhancement-Mode PHEMT

### 0.5 – 6 GHz Low Noise Amplifier

## Data Sheet

### Description

Avago's MGA-665P8 is an economical, easy-to-use GaAs MMIC Low Noise Amplifier (LNA) with a unique active-low power-down function. The LNA has low noise figure and high gain achieved through the use of Avago Technologies' proprietary GaAs Enhancement-mode PHEMT process. It is housed in a miniature 2.0 x 2.0 x 0.75 mm 8-pin Leadless-Plastic-Chip-Carrier (LPCC) package. The compact footprint and low profile coupled with low noise, high gain and high linearity makes the MGA-665P8 an ideal choice as an LNA for broadband general-purpose applications. Its excellent broadband isolation also makes it a good buffer amplifier.

The output of the MGA-665P8 provides a very good broadband match to 50 Ω. Its input requires a simple external LC network to provide a low noise figure and good input return loss. Power supply voltage is applied to both the output terminal and a separate V<sub>D</sub> terminal. A simple external bias insertion circuit consisting of a shunt inductor and a series dc block capacitor is sufficient to apply power supply voltage to the output of the MGA-665P8. The MGA-665P8 provides typical device performance of 1.45 dB noise figure, 16 dB gain and an OIP3 of +18.1 dBm at 5.25 GHz, at a bias point of 3 V and 20.5 mA.

### Features

- Surface Mount, 2.0 x 2.0 x 0.75 mm 8-lead LPCC
- Active-low power-down function
- Single +3 V supply operation
- Low noise and high gain MMIC
- Output 50 Ω match
- Excellent isolation
- Minimal match and external biasing components
- Housed in miniature 2 x 2 x 0.75 mm LPCC package
- Pb-free & MSL-1 package

### Specifications

- 0.5 to 6 GHz operation
- At 3 V, 20.5 mA, 2.4 GHz:  
NF = 1.2 dB  
Gain = 18.4 dB  
OIP3 = 19 dBm
- At 3 V, 20.5 mA, 5.25 GHz:  
NF = 1.45 dB  
Gain = 16 dB  
OIP3 = 18.1 dBm

**POWER DOWN FUNCTION:**  
LOGIC LOW (0-1 V): POWER ON  
LOGIC HIGH (2-3 V): POWER OFF

**NOTES:**  
1. PINS 1, 3, AND PADDLE NEED TO BE PROPERLY GROUNDED TO OBTAIN SPECIFIED PERFORMANCE.  
2. SUPPLY VOLTAGE, V<sub>D</sub>, NEEDS TO BE APPLIED AT PINS 6 & 7. SUPPLY AT PIN 7 TO BE APPLIED USING A BIAS TEE OR EQUIVALENT.

**Attention:** Observe precautions for handling electrostatic sensitive devices.  
ESD Machine Model = 40 V  
ESD Human Body Model = 150 V

**Notes:**

- Measurements obtained using production test board described in Figure 5, which represents a trade-off between optimal OIP3, P1dB, Gain and NF. Circuit losses have been de-embedded from actual measurements.
- Measurements obtained using test fixture with input tuned for low noise figure. Gain, OIP3 and P1dB were measured at this tuned condition. Tuner and fixture losses have been de-embedded from actual measurements. The supply is connected to ground via a bypass capacitor. The OIP3 is approximately 3 dB lower without this bypass capacitor.
- OIP3 test condition:  $P_{in} = -20\text{ dBm}$ ,  $\Delta f = f_1 - f_2 = 10\text{ MHz}$ .
