

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Supervisor with High-Accuracy, Ultra-Fast Propagation Delay, and Capacitor-Programmable Reset Delay

General Description

The MIC2790/1/3 is ideal for monitoring highly-accurate core voltages that require rapid response in the event of a fault condition. The voltage supervisor IC features a manual reset input, enable input (MIC2793 only), a capacitor-programmable reset timeout delay and both an active-low and active-high reset output.

The MIC2790/1/3 monitors system voltages that are in the range of 0.4V to 5.5V, with a typical sense accuracy of 0.5% at +25°C and $\pm 1.0\%$ across -40°C to $+125^{\circ}\text{C}$. The IC asserts a reset output when the sense voltage drops below the threshold or when the manual reset is pulled to a logic low. The active-low reset stays low for the duration of the reset timeout delay once the sense voltage returns to normal and the manual reset transitions to a logic high state. The reset timeout delay period is programmable from 1ms to 10s with an external capacitor.

The MIC2790/1/3 operates from a low supply voltage of 1.5V to 5.5V, and is rated to operate over the temperature range of -40°C to $+125^{\circ}\text{C}$. The MIC2790 is available in a 6-pin TSOT-23 package or a 6-pin $2\text{mm} \times 2\text{mm} \times 0.55\text{mm}$ DFN package. The MIC2791 is available in a tiny 6-pin $1.6\text{mm} \times 1.6\text{mm} \times 0.55\text{mm}$ DFN package. The MIC2793 is available in a 8-pin $2\text{mm} \times 2\text{mm} \times 0.55\text{mm}$ DFN package.

Datasheets and support documentation are available on Micrel's web site at: www.micrel.com.

Features

- 1.5V to 5.5V operating supply voltage range
- Ultra-fast propagation delay ($1\mu\text{s}$ typically)
- 0.4V reference voltage (SNS pin)
 - $\pm 1.0\%$ threshold accuracy from -40°C to $+125^{\circ}\text{C}$
 - Monitored voltage range from 0.4V to 5.5V
- Programmable reset timeout delay (from 1ms to 10s)
- Manual reset input with an internal pull-up resistor
- Active-high enable input pin (MIC2793 only)
- The MIC2790/1/3 features multiple output options:
 - Open-drain active-low (/RESET)
 - Push-pull active-low (/RESET)
 - Push-pull active-high (RESET)
- -40°C to 125°C junction temperature range
- 6-pin TSOT-23 (MIC2790)
- 6-pin $2\text{mm} \times 2\text{mm}$ Thin DFN (MIC2790)
- 6-pin $1.6\text{mm} \times 1.6\text{mm}$ Thin DFN (MIC2791)
- 8-pin $2\text{mm} \times 2\text{mm}$ Thin DFN (MIC2793)

Applications

- Telecom
- Computer/servers
- Medical equipment
- Portable
- Set-top boxes
- Critical microprocessor monitoring

Typical Application

Notes:

1. Other voltage options are available. Contact Micrel for details.
2. Thin DFN pin 1 identifier = "▲".
3. Thin DFN is a GREEN RoHS compliant package. Lead finish is NiPdAu. Mold compound is Halogen free.

Pin Description

Pin Number TSOT-23 (6L)	Pin Number 1.6 × 1.6 (6L)	Pin Number 2 × 2 (6L)	Pin Number 2 × 2 (8L)	Pin Name	Pin Function
1	6	6	7	/RESET	<p>/RESET is an active-low output pin and is available in an open-drain or push-pull configuration.</p> <p>In the open-drain configuration, a pull-up resistor to VDD is required and /RESET pin is asserted low when /MR is set to a logic low or the SNS voltage decreases below the threshold voltage. /RESET will remain low for the reset timeout delay after $SNS > (V_{TH} + V_{HYST})$ and /MR is set to a logic high.</p> <p>The push-pull configuration does not require a pull-up resistor and behaves exactly the same as the open-drain configuration.</p>
1	6	6	8	RESET	<p>Reset is an active-high push-pull output and is asserted high when /MR is set to a logic low or the SNS voltage decreases below the threshold voltage. RESET will remain high for the reset timeout delay after $SNS > (V_{TH} + V_{HYST})$ and /MR is set to a logic high.</p>
2	5	5	6	GND	Supply Ground.
3	4	4	5	/MR	<p>Manual reset is an active-low input logic level pin and is internally pulled to VDD through a 90kΩ pull-up resistor. Pulling the /MR input to a logic low asserts RESET and /RESET pins. /RESET will remain low and RESET will remain high for the reset timeout delay after /MR is pulled to logic high.</p>
4	3	3	4	CTH	<p>Programmable timeout delay. Connect a capacitor to ground to set a user defined reset delay time.</p>
5	2	2	3	SNS	<p>Voltage monitor input. Connect sense pin to the voltage to be monitored through a resistor divider. When this voltage decreases below the threshold voltage, V_{TH}, /RESET is asserted low and RESET is asserted high.</p>
6	1	1	2	VDD	<p>Supply voltage pin. Bypass with a 1μF capacitor from this pin to GND.</p>
–	–	–	1	EN	<p>Enable input function is only available in the MIC2793 version. This pin enables the /MR input function and RESET and /RESET outputs. When EN is in a logic low state, the reset outputs are de-asserted. The EN pin has an internal 90kΩ pull-up resistor to VDD.</p>
–	EP	EP	EP	ePad	Exposed Pad. Connect to ground plane.

Absolute Maximum Ratings⁽⁴⁾

Supply Voltage (V_{DD})	-0.3V to +6.0V
SNS	-0.3V to 4.5V
/MR, EN, C_{TH}	-0.3V to V_{DD}
RESET, /RESET	-0.3V to V_{DD}
Lead Temperature (soldering, 10s)	260°C
Storage Temperature (T_S)	-55°C to +150°C
ESD Ratings ⁽⁶⁾	ESD Sensitive

Operating Ratings⁽⁵⁾

Supply Voltage (V_{DD})	+1.5V to +5.5V
SNS	0V to 4.0V
/MR, EN, C_{TH}	0V to V_{DD}
RESET, /RESET	0V to V_{DD}
Junction Temperature (T_J)	-40°C to +125°C
Junction Thermal Resistance	
6-pin, TSOT-23 (θ_{JA})	177.2°C/W
6-pin, 1.6mm × 1.6mm TDFN (θ_{JA})	92.4°C/W
6-pin, 2mm × 2mm TDFN (θ_{JA})	90°C/W
8-pin, 2mm × 2mm TDFN (θ_{JA})	90°C/W

Electrical Characteristics⁽⁷⁾

$V_{DD} = 3.3V$; $R_{/RESET} = 100k\Omega$; $C_{TH} = 1nF$; $T_A = 25^\circ C$, **bold** values indicate $-40^\circ C \leq T_A \leq +125^\circ C$, unless noted.

Symbol	Parameter	Condition	Min.	Typ.	Max.	Units
Supply Specifications						
V_{DD}	Supply Voltage	/RESET Output Valid	1.5		5.5	V
I_{DD}	Supply Current	$V_{DD} = EN = /MR = 3.3V$ RESET and /RESET not asserted		40	70	μA
		$V_{DD} = EN = /MR = 5V$ RESET and /RESET not asserted		50	80	
Sense Specifications						
V_{TH}	Sense Threshold Voltage			0.4		V
	Sense Threshold Accuracy		-1.0		+1.0	%
V_{HYST}	Hysteresis	Sense rising	-2.5	± 1.5	+2.5	%
I_{SNS}	Sense Input Bias Current		-15		+15	nA
RESET & /RESET Output Specifications						
$t_{p,SNS}$	SNS to RESET and /RESET Propagation Delay ⁽⁸⁾	$SNS = V_{TH} \times 1.05$ to $V_{TH} \times 0.95$		1	2.2	μs
V_{OL}	/RESET Logic Low Output Voltage	$I_{OL} = 1mA$ (open-drain only)			0.3	V
V_{OH}	RESET Logic High Output Voltage	$I_{OH} \leq 1mA$ (push-pull only)	>0.9 × V_{DD}			V
I_{OH}	/RESET Leakage Current	/RESET not asserted (open-drain only)			1	μA
t_d	RESET and /RESET Timeout Delay	$C_{TH} = 100pF$	0.45	1.05	1.8	ms
		$C_{TH} = 180nF$	0.5	1.2	1.9	s

Notes:

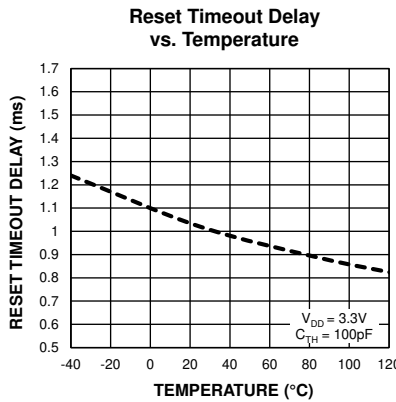

- Exceeding the absolute maximum ratings may damage the device.
- The device is not guaranteed to function outside its operating ratings.
- Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5k Ω in series with 100pF.
- Specification for packaged product only.
- SNS to RESET and or /RESET propagation delay is the delay time for SNS voltage to transition from $V_{TH} \times 1.05$ to $V_{TH} \times 0.95$ to RESET and or /RESET.

Functional Description

Design and Product Advantages

The MIC2790/1/3 is a highly-accurate supervisor circuit with an ultra-fast propagation delay of 2.2 μ s (maximum) over the temperature range of -40°C to $+125^{\circ}\text{C}$. Additional features in the MIC2790/1/3 include a manual reset input pin, a capacitor-programmable reset timeout delay and both an active-low and active-high reset output. The capacitor-programmable reset delay help protect against accidental system glitch during a reset timeout.

VDD

The input supply (V_{DD}) provides power to the comparators and logic timers. V_{DD} operating range is 1.5V to 5.5V. A ceramic input capacitor of 1 μ F with a minimum voltage rating of 6.3V is recommended between VDD and GND. Refer to [PCB Layout Recommendations](#) for details.

EN

The enable (EN) pin feature is only available in the MIC2793 option and has an internal pull-up of 90k Ω resistor to VDD. A logic high signal on EN pin enables the reset logic outputs, while a logic low signal disables the reset outputs. See [Figure 3](#) in the [Timing Diagrams](#) section for more information.

CTH

C_{TH} is a programmable timeout delay pin. Connect a capacitor to ground to set a reset timeout delay ranging from 1ms to 10s. Refer to the Reset Timeout Delay vs. C_{TH} plot in the [Typical Characteristics](#) section for examples.

SNS

The sense (SNS) input pin monitors the user's voltage through a resistor divider network as shown in [Figure 5](#).

Figure 5. Resistor Divider on SNS pin

To set R_{TOP} and R_{BOTTOM} , use Equation 1 and set an arbitrary R_{TOP} value greater than 100k Ω and solve for R_{BOTTOM} or vice versa.

$$V_{\text{MONITOR}} = 0.4\text{V} \times \left(1 + \frac{R_{\text{TOP}}}{R_{\text{BOTTOM}}} \right) \quad \text{Eq. 1}$$

GND

The ground (GND) pin is the return path for VDD, logic gates, and output pins. Refer to [PCB Layout Recommendations](#) for details.

/MR

Manual reset (/MR) is an active-low input pin that is internally pulled to VDD with a 90k Ω resistor. When /MR is asserted to a logic-low level, /RESET will transition to a logic low state while RESET will transition to a logic high state. See the [Timing Diagrams](#) section for more information.

/RESET

/RESET is an active-low output and is available in two output configurations: open-drain or push-pull. The open-drain configuration requires an external pull-up resistor, while the push-pull does not.

/RESET is asserted low when /MR is set to a logic-low or the SNS voltage decreases below the threshold voltage. /RESET will remain low for the programmed reset timeout delay after $\text{SNS} > (V_{\text{TH}} + V_{\text{HYST}})$ and /MR is set to a logic-high, and then /RESET will transition high to indicate normal regulation. See the [Timing Diagrams](#) section for more information.

RESET

RESET is an active-high push-pull output and is asserted high when /MR is set to a logic low or the SNS voltage decreases below the threshold voltage. RESET will remain high for the programmed reset timeout delay after $\text{SNS} > (V_{\text{TH}} + V_{\text{HYST}})$ and /MR is set to a logic high, and then RESET will transition low to indicate normal regulation. See the [Timing Diagrams](#) section for more information.

PCB Layout Recommendations

Top Layer

Bottom Layer

Package Information⁽¹⁴⁾ and Recommended Land Pattern (TSOT-23-6L)

NOTE:

1. Dimensions and tolerances are as per ANSI Y14.5M, 1994.
2. Die is facing up for mold. Die is facing down for trim/form, ie. reverse trim/form.
3. Dimensions are exclusive of mold flash and gate burr.
4. The footlength measuring is based on the gauge plane method.
5. All specification comply to Jedec Spec MO193 Issue C.
6. All dimensions are in millimeters.

6-pin TSOT-23 (D6)

Note:

14. Package information is correct as of the publication date. For updates and most current information, go to www.micrel.com.

Package Information⁽¹⁴⁾ and Recommended Land Pattern (1.6mm × 1.6mm TDFN-6L)

- NOTE:
1. MAX PACKAGE WARPAGE IS 0.05 MM
 2. MAX ALLOWABLE BURR IS 0.076MM IN ALL DIRECTIONS
 3. PIN #1 IS ON TOP WILL BE LASER MARKED
 4. GREEN SHADED AREA REPRESENT SOLDER STENCIL OPENING (OPTIONAL) FOR IMPROVED THERMAL PERFORMANCE. SIZE: 0.55×0.30MM

6-pin 1.6mm × 1.6mm TDFN (MT)

Package Information⁽¹⁴⁾ and Recommended Land Pattern (2mm x 2mm TDFN-6L)
