

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## General Description

The MIC5317 is a high performance 150mA low dropout regulator offering high power supply rejection (PSRR) in an ultra-small 1mm × 1mm package for stringent space requirements and demanding performance. The MIC5317 operates from an input voltage from 2.5V to 6.0V and is capable of providing the output voltages of 1.0V to 3.6V making it ideal for USB port or 6V AC adaptor applications.

The MIC5317 offers 2% initial accuracy, low dropout voltage (155mV @ 150mA), and low ground current (typically 29µA). The MIC5317 can also be put into a zero-off-mode current state, drawing virtually no current when disabled.

The MIC5317 is available in several advanced packages including a lead-free (RoHS-compliant) 1mm × 1mm Thin DFN occupying only 1mm<sup>2</sup> of PCB area, a 75% reduction in board area compared to SC-70 and 2mm × 2mm DFN packages. It is also available in a SOT23-5 and TSOT23-5 package.

The MIC5317 has an operating junction temperature range of -40°C to 125°C.

Datasheets and support documentation are available on Micrel's web site at: [www.micrel.com](http://www.micrel.com).

## Features

- Tiny 1mm × 1mm Thin DFN, SOT23-5 and TSOT23-5 packages
- Wide 2.5V to 6V operating range
- 150mA guaranteed output current
- Stable with 1µF ceramic output capacitors
- Low dropout voltage: 155mV @ 150mA
- Excellent load/line transient response
- Low quiescent current: 29µA
- High PSRR: 70dB
- Thermal-shutdown and current-limit protection

## Applications

- USB dongles
- Wireless LANs
- PC Desktops, laptops, and tablets
- Battery-powered equipment
- Digital still and video cameras
- 5V general purpose

---

## Typical Application

## Pin Description

Pin Number	Pin Name TDFN-4	Pin Name SOT23-5	Pin Name TSOT23-5	Pin Function
1	VOUT	–	–	Output Voltage.
1	–	VIN	VIN	Supply Input.
2	GND	GND	GND	Ground.
3	EN	EN	EN	Enable Input: Active High. High = ON; Low = OFF. Do not leave floating.
4	VIN	–	–	Supply Input.
4	–	NC	NC	No connect. Not internally connected.
5	–	VOUT	VOUT	Output Voltage.
EP	ePad	NA	NA	Exposed Heatsink Pad, connect to Ground.

### Absolute Maximum Ratings<sup>(4)</sup>

Supply Voltage ( $V_{IN}$ )	0V to 7V
Enable Voltage ( $V_{EN}$ )	0V to $V_{IN}$
Power Dissipation ( $P_D$ )	Internally Limited <sup>(6)</sup>
Lead Temperature (soldering, 10sec)	260°C
Junction Temperature ( $T_J$ )	-40°C to +150°C
Storage Temperature ( $T_S$ )	-65°C to +150°C
ESD Rating <sup>(7)</sup>	2kV

### Operating Ratings<sup>(5)</sup>

Supply Voltage ( $V_{IN}$ )	2.5V to 6V
Enable Voltage ( $V_{EN}$ )	0V to $V_{IN}$
Junction Temperature ( $T_J$ )	-40°C to +125°C
Junction Thermal Resistance	
1mm x 1mm Thin DFN-4 ( $\theta_{JA}$ )	240°C/W
SOT23-5 ( $\theta_{JA}$ )	253°C/W
TSOT23-5 ( $\theta_{JA}$ )	253°C/W

### Electrical Characteristics<sup>(8)</sup>

$V_{IN} = V_{EN} = V_{OUT} + 1V$ ;  $C_{IN} = C_{OUT} = 1\mu F$ ;  $I_{OUT} = 100\mu A$ ;  $T_J = 25^\circ C$ , **bold** values indicate -40°C to +125°C, unless noted.

Parameter	Condition	Min	Typ	Max	Units
Output Voltage Accuracy	Variation from nominal $V_{OUT}$	-2.0		+2.0	%
	Variation from nominal $V_{OUT}$ ; -40°C to +125°C	<b>-3.0</b>		<b>+3.0</b>	
Line Regulation	$V_{IN} = V_{OUT} + 1V$ to 6V; $I_{OUT} = 100\mu A$		0.02	<b>0.3</b>	%
Load Regulation <sup>(9)</sup>	$I_{OUT} = 100\mu A$ to 150mA		10	25	mV
Dropout Voltage <sup>(10)</sup>	$I_{OUT} = 50mA$ ; $V_{OUT} \geq 2.8V$		55	<b>110</b>	mV
	$I_{OUT} = 150mA$ ; $V_{OUT} \geq 2.8V$		155	<b>310</b>	
	$I_{OUT} = 50mA$ ; $V_{OUT} < 2.8V$		60	<b>135</b>	
	$I_{OUT} = 150mA$ ; $V_{OUT} < 2.8V$		180	<b>380</b>	
Ground Pin Current <sup>(11)</sup>	$I_{OUT} = 0mA$		29	<b>39</b>	$\mu A$
Ground Pin Current in Shutdown	$V_{EN} = 0V$		0.05	1	$\mu A$
Ripple Rejection	$f =$ up to 1kHz; $C_{OUT} = 1\mu F$		80		dB
	$f = 1kHz - 10kHz$ ; $C_{OUT} = 1\mu F$		65		
Current Limit	$V_{OUT} = 0V$	200	325	550	mA
Output Voltage Noise	$C_{OUT} = 1\mu F$ , 10Hz to 100kHz		200		$\mu V_{RMS}$
<b>Enable Input</b>					
Enable Input Voltage	Logic Low			<b>0.2</b>	V
	Logic High	<b>1.2</b>			
Enable Input Current	$V_{IL} \leq 0.2V$		0.01	<b>1</b>	$\mu A$
	$V_{IH} \geq 1.2V$		0.01	<b>1</b>	
Turn-on Time	$C_{OUT} = 1\mu F$ ; $I_{OUT} = 150mA$		50	<b>125</b>	$\mu s$

**Notes:**

4. Exceeding the absolute maximum ratings may damage the device.
5. The device is not guaranteed to function outside its operating ratings.
6. The maximum allowable power dissipation of any TA (ambient temperature) is  $P_D(max) = (T_J(max) - TA) / \theta_{JA}$ . Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.
7. Devices are ESD sensitive. Handling precautions are recommended. Human body model, 1.5k $\Omega$  in series with 100pF.
8. Specification for packaged product only.
9. Regulation is measured at constant junction temperature using low duty cycle pulse testing, changes in output voltage due to heating effects are covered by the thermal regulation specification
10. Dropout voltage is defined as the input-to-output differential at which the output voltage drops 2% below its nominal value measured at 1V differential. For outputs below 2.5V, dropout voltage is the input-to-output differential with the minimum input voltage 2.5V.
11. Ground pin current is the regulator quiescent current. The total current drawn from the supply is the sum of the load current plus the ground pin current.

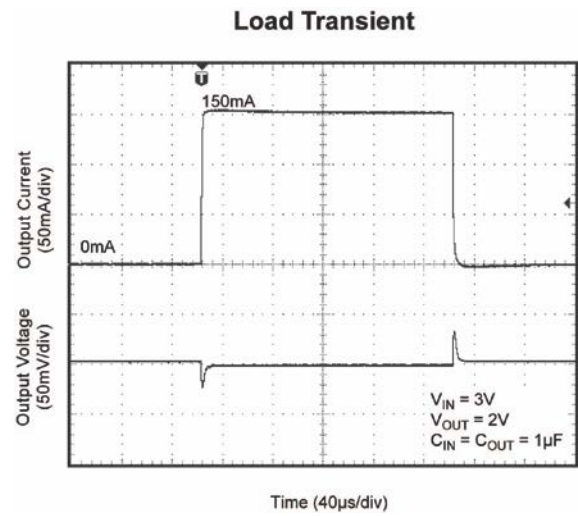

# Typical Characteristics

### Typical Characteristics (Continued)

## Functional Characteristics

### Functional Block Diagram

## Application Information

MIC5317 is a low-noise 150mA LDO. The MIC5317 regulator is fully protected from damage due to fault conditions, offering linear current limiting and thermal shutdown.

### Input Capacitor

The MIC5317 is a high-performance, high-bandwidth device. An input capacitor of 1 $\mu$ F is required from the input to ground to provide stability. Low-ESR ceramic capacitors provide optimal performance at a minimum of space. Additional high-frequency capacitors, such as small-valued NPO dielectric-type capacitors, help filter out high-frequency noise and are good practice in any RF-based circuit. X5R or X7R dielectrics are recommended for the input capacitor. Y5V dielectrics lose most of their capacitance over temperature and are therefore, not recommended.

### Output Capacitor

The MIC5317 requires an output capacitor of 1 $\mu$ F or greater to maintain stability. The design is optimized for use with low-ESR ceramic chip capacitors. High-ESR capacitors are not recommended because they may cause high-frequency oscillation. The output capacitor can be increased, but performance has been optimized for a 1 $\mu$ F ceramic output capacitor and does not improve significantly with larger capacitance.

X7R/X5R dielectric-type ceramic capacitors are recommended because of their temperature performance. X7R-type capacitors change capacitance by 15% over their operating temperature range and are the most stable type of ceramic capacitors. Z5U and Y5V dielectric capacitors change value by as much as 50% and 60%, respectively, over their operating temperature ranges. To use a ceramic-chip capacitor with Y5V dielectric, the value must be much higher than an X7R ceramic capacitor to ensure the same minimum capacitance over the equivalent operating temperature range.

### No-Load Stability

Unlike many other voltage regulators, the MIC5317 will remain stable and in regulation with no load. This is especially important in CMOS RAM keep-alive applications.

### Enable/Shutdown

The MIC5317 comes with an active-high enable pin that allows the regulator to be disabled. Forcing the enable pin low disables the regulator and sends it into a “zero” off-mode-current state. In this state, current consumed by the regulator goes nearly to zero. Forcing the enable pin high enables the output voltage. The active-high enable pin uses CMOS technology and the enable pin cannot be left floating; a floating enable pin may cause an indeterminate state on the output.

### Thermal Considerations

The MIC5317 is designed to provide 150mA of continuous current in a very small package. Maximum ambient operating temperature can be calculated based on the output current and the voltage drop across the part. For example if the input voltage is 3.6V, the output voltage is 2.8V, and the output current = 150mA. The actual power dissipation of the regulator circuit can be determined using Equation 1:

$$P_D = (V_{IN} - V_{OUT1}) I_{OUT} + V_{IN} I_{GND} \quad \text{Eq. 1}$$

Because this device is CMOS and the ground current is typically <100 $\mu$ A over the load range, the power dissipation contributed by the ground current is < 1% and can be ignored for Equation 2:

$$P_D = (3.6V - 2.8V) \times 150mA$$

$$P_D = 0.120W \quad \text{Eq. 2}$$

To determine the maximum ambient operating temperature of the package, use the junction-to-ambient thermal resistance of the device and Equation 3:

$$P_{D(MAX)} = \left( \frac{T_{J(max)} - T_A}{\theta_{JA}} \right) \quad \text{Eq. 3}$$

$T_{J(max)} = 125^\circ\text{C}$ , the maximum junction temperature of the die,  $\theta_{JA}$  thermal resistance = 240 $^\circ\text{C/W}$  for the YMT package, and 253 $^\circ\text{C/W}$  for the SOT23-5 and TSOT23-5 packages.

Substituting  $P_D$  for  $P_{D(max)}$  and solving for the ambient operating temperature will give the maximum operating conditions for the regulator circuit. The junction-to-ambient thermal resistance for the minimum footprint is  $240^{\circ}\text{C}/\text{W}$ .

The maximum power dissipation must not be exceeded for proper operation.

For example, when operating the MIC5317-2.8YMT at an input voltage of 3.6V and 150mA load with a minimum footprint layout, the maximum ambient operating temperature  $T_A$  can be determined as shown in Equation 4:

$$0.120\text{W} = (125^{\circ}\text{C} - T_A)/(240^{\circ}\text{C}/\text{W})$$
$$T_A = 96^{\circ}\text{C} \quad \text{Eq. 4}$$

Therefore the maximum ambient operating temperature of  $96^{\circ}\text{C}$  is allowed in a  $1\text{mm} \times 1\text{mm}$  DFN package. For a full discussion of heat sinking and thermal effects on voltage regulators, refer to the "Regulator Thermals" section of *Micrel's Designing with Low-Dropout Voltage Regulators* handbook.
