

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

MINI-M4™

development board for Stellaris®

The whole Stellaris® development board fitted in DIP40 form factor, containing powerful LX4F230H5QR microcontroller.

TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

Introduction to MINI-M4 for Stellaris®

Miniature and powerful development tool designed to work as stand alone device or as MCU card in DIP40 socket. MINI-M4 for Stellaris® is pre programmed with USB HID bootloader so it is not necessary to have external programmer. If there is need for external programmer (mikroProg™ for Stellaris®) attach it to MINI-M4 for Stellaris® via pads marked with **PC0** (TCK/SWC), **PC1** (TMS/SWD), **PC2** (TDI), **PC3** (TDO) and **RST#**.

Key features

- 01 Connection Pads
- 02 USB MINI-B connector
- 03 DATA LED
- 04 STAT LED
- 05 POWER supply LED
- 06 Reset button
- 07 Power supply regulator
- 08 Microcontroller LX4F230H5QR
- 09 16 MHz Crystal oscillator
- 10 32.768kHz Crystal oscillator

System Specification

power supply
3.3V via pads or 5V via USB

power consumption
depends on MCU state (max current into 3.3V pad is 800mA)

board dimensions
50.8 x 17.78mm (2 x 0.7")

weight
~6g (0.013 lbs)

1. Programming with mikroBootloader

You can program the microcontroller with bootloader which is pre programmed into the device by default. To transfer .hex file from a PC to MCU you need bootloader software (**mikroBootloader USB HID**) which can be downloaded from:

http://www.mikroe.com/downloads/get/1937/mi_mini_m4_stellaris_bootloader_v200.zip

After software is downloaded unzip it to desired location and start mikroBootloader USB HID software.

step 1 - Connecting MINI-M4

Figure 1-1: USB HID mikroBootloader window

- 01 To start, connect the USB cable, or if already connected press the **Reset** button on your MINI-M4 board. Click the **“Connect”** button within 5s to enter the bootloader mode, otherwise existing microcontroller program will execute.

step 2 - Browsing for .HEX file

Figure 1-2: Browse for HEX

- 01 Click the **"Browse for HEX"** button and from a pop-up window (**Figure 1-3**) choose the .HEX file which will be uploaded to MCU memory.

step 3 - Selecting .HEX file

Figure 1-3: Selecting HEX

- 01 Select .HEX file using open dialog window.
- 02 Click the **"Open"** button.

step 4 - Uploading .HEX file

Figure 1-4: Begin uploading

- 01 To start .HEX file bootloading click the "Begin uploading" button.

Figure 1-5: Progress bar

- 01 You can monitor .HEX file uploading via progress bar

step 5 - Finish upload

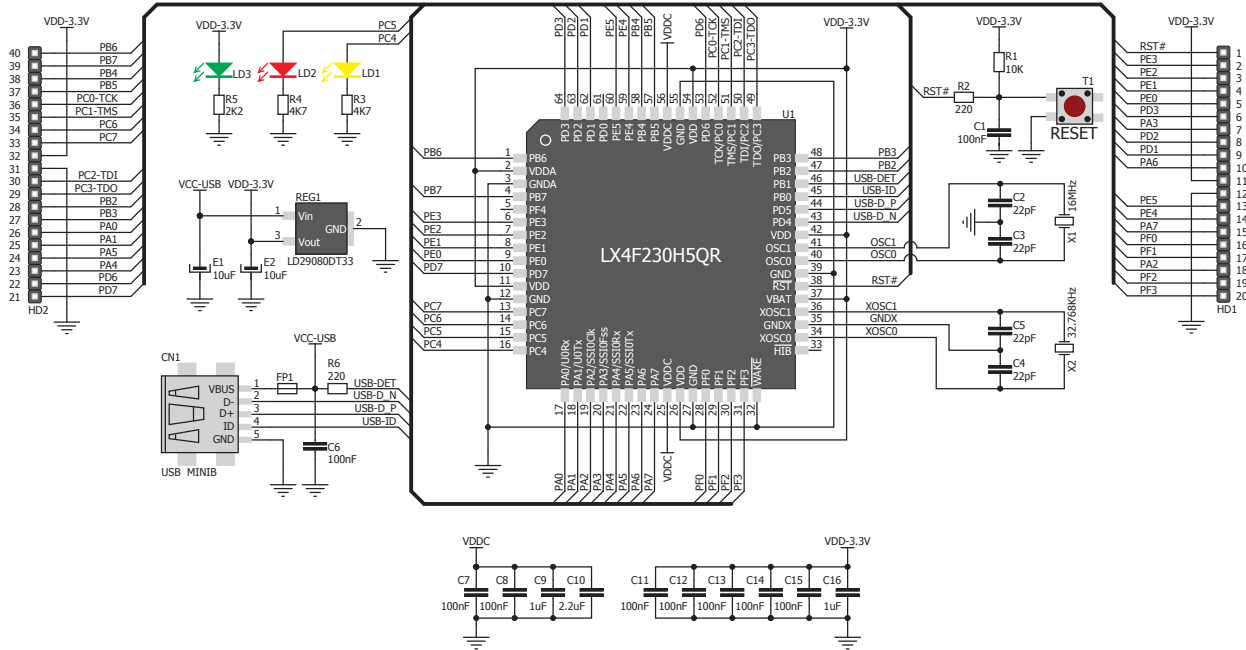

Figure 1-6: Restarting MCU

- 01 Click the **"OK"** button after uploading is finished and wait for 5 seconds. Board will automatically reset and your new program will execute.

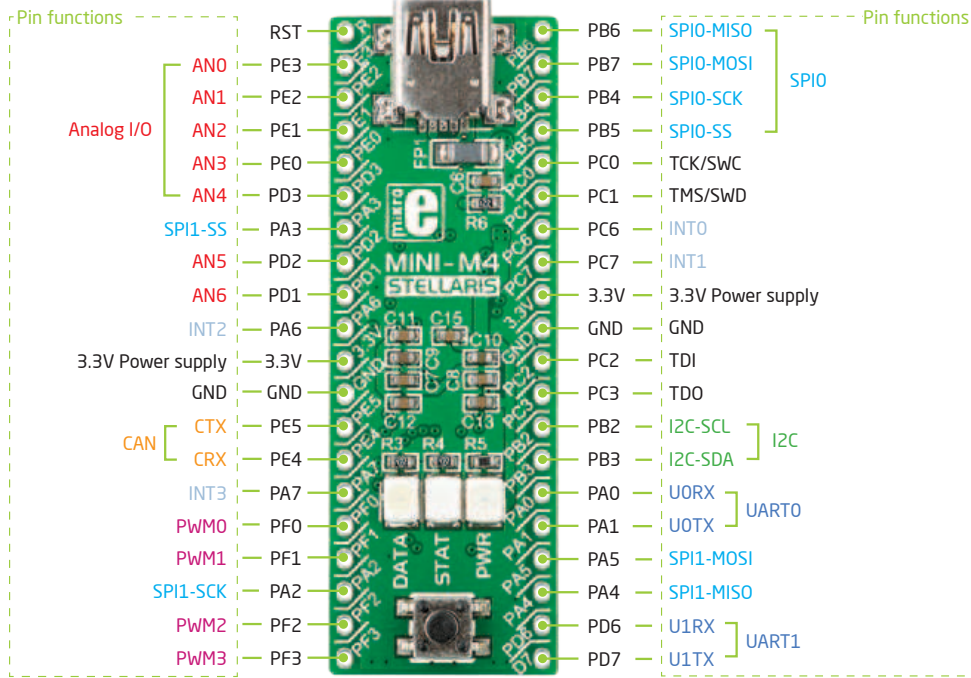

Figure 1-7: mikroBootloader ready for next job
