

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Ethernet connector™

Manual

All Mikroelektronika's development systems feature a large number of peripheral modules expanding microcontroller's range of application and making the process of program testing easier. In addition to these modules, it is also possible to use numerous additional modules linked to the development system through the I/O port connectors. Some of these additional modules can operate as stand-alone devices without being connected to the microcontroller.

Additional Board

 **MikroElektronika**

SOFTWARE AND HARDWARE SOLUTIONS FOR EMBEDDED WORLD ...making it simple

Ethernet Connector

The Ethernet Connector is a simple, yet effective solution for adding reliable connection capability to your ethernet-supporting device. Board contains 10/100 Base-T RJ45 connector and surrounding electronics for stable and reliable ethernet operation.

Key features:

- RJ45 ethernet connector;
- 3.3V DC power supply.

Figure 1: Ethernet connector additional board

Connection:

The additional board can be connected to a microcontroller that has integrated ethernet controller or any other device that features adequate ethernet controller.

For connection with a device, the additional board uses pads CN1. In order to connect the additional board to ethernet network, it is necessary to plug network cable into ethernet connector CN2.

Pinout:

Pads pinout:

- LEDA: Signal LED output (indicates receiving data rate);
- LEDB: Signal LED output (indicates transmission data rate);
- TPIN+: Differential Ethernet Receive Plus Signal Input;
- TPIN-: Differential Ethernet Receive Minus Signal Input;
- TPOUT+: Differential Ethernet Transmit Plus Signal Output;
- TPOUT-: Differential Ethernet Transmit Minus Signal Output;
- VCC3.3: 3.3V power supply input; and
- GND: Ground.
