# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

A compact starter kit with your favorite microcontroller and two mikroBUS<sup>™</sup> sockets

### TO OUR VALUED CUSTOMERS

I want to express my thanks to you for being interested in our products and for having confidence in MikroElektronika.

The primary aim of our company is to design and produce high quality electronic products and to constantly improve the performance thereof in order to better suit your needs.

### Introduction to clicker 2 for dsPIC33

clicker 2 for dsPIC33 is a compact development kit with two mikroBUS<sup>™</sup> sockets for click hoard<sup>™</sup> connectivity. You can use it to quickly build your own gadgets with unique functionalities and features. It carries the dsPIC33EP512MU810. a 16-bit microcontroller, two indication LEDs. two general purpose buttons, a reset button, an ON/OFF switch, a li-polymer battery connector, a micro USB connector and two mikroBUS™ sockets. A mikroProg connector and a 2x26 pinout for interfacing with external electronics are also provided. The mikroBUS<sup>™</sup> connector consists of two 1x8 female headers with SPI. I 2C, UART, RST, PWM, Analog and Interrupt lines as well as 3.3V, 5V and GND power lines. clicker 2 for dsPIC33 board can be powered over a USB cable.

# Key features

- 1 ON/OFF switch
- 2 8 MHz crystal oscillator
- 3 two 1x26 connection pads
- 4 mikroBUS™ sockets 1 and 2
- 5 Pushbuttons
- 6 Additional LEDs
- 7 LTC3586 USB power manager IC
- 8 Power and Charge indication LEDs
- 9 RESET button
- 10 Micro USB connector
- 11 dsPIC33EP512MU810 MCU
- 12 Li-Polymer battery connector
- 13 mikroProg programmer connector
- 14 32.768 KHz crystal oscillator

clicker 2 for dsPIC33 schematic

# **1.** Power supply

You can supply power to the board with a micro USB cable provided in the package. On-board voltage regulators provide the appropriate voltage levels to each component on the board. Power LED [GREEN] will indicate the presence of power supply.

### Battery power supply

You can also power the board using a Li-Polymer battery, via onboard battery connector. On-board battery charger circuit enables you to charge the battery over USB connection. LED diode [RED] will indicate when battery is charging. Charging current is ~300mA and charging voltage is 4.2V DC.t

Figure 1-2: Connecting Li-Polymer battery

NOTE Some click boards need more current than the USB connection can supply. For 3.3V clicks, the upper limit is 750 mA; for 5V clicks, it's 500 mA. In those cases you would need to use the battery as the power supply, or the vsys pin on the side of the board.

## 2. dsPIC33EP512MU810 microcontroller

The clicker 2 for dsPIC33 development tool comes with the dsPIC33EP512MU810 device. This 16-bit low power high performance microcontroller is rich with on-chip peripherals and features 512 KB of program memory and 53,248 bytes of RAM. It has integrated full speed USB 2.0. support.

### **Key MCU features**

- CPU speed: 70 MIPS
- 3568 Bytes Data SRAM
- Architecture: 16-bit
- Program memory: 512KB
- Pin count: 100
- RAM memory: 53,248 KB

### **3. Programming the microcontroller**

• Using external mikroProg for dsPIC33 programmer

# **3.1 Programming with mikroBootloader**

You can program the microcontroller with a bootloader which is preprogrammed by default. To transfer .hex file from a PC to MCU you need bootloader software (mikroBootloader USB HID) which can be downloaded from:

https://download.mikroe.com/examples/starter-boards/ clicker-2/dspic33/clicker-2-dspic33-usb-hid-bootloader.zip

After the mikroBootloader software is downloaded, unzip it to desired location and start it.

### step 1 - Connecting clicker 2 for dsPIC33

mikroBo	ouoaue	Device	
<b>1</b> Wait for USB link	4	MCU Type	
2 Connect to MCU	Conne	History Window Attach USB HID device or res	et if attached.
<b>3</b> Choose HEX file	Browse for HEX		
4 Start bootloader	Begin uploading		
Bootloading progress bar			

#### Figure 3-2: USB HID mikroBootloader window

To start, connect the USB cable, or if already connected press the Reset button on your clicker 2 for dsPIC33. Click the Connect button within 5s to enter the bootloader mode, otherwise existing microcontroller program will execute.

### step 2 - Browsing for .HEX file

mikroBootloa	Device Clicker 2 for dsPIC3	3 👻
1 Wait for USB link	MCU Type dsPIC33	÷
2 Connect Disconne	Attach USB HID device or reset if attache Reset device to reenter bootloader mode

### 3.2 Programming with mikroProg programmer

The microcontroller can be programmed with external **mikroProg for PIC programmer** and **mikroProg Suite for PIC software**. The external programmer is connected to the development system via 1x5 connector **Figure 3-9**. **mikroProg** is a fast USB 2.0 programmer with hardware debugger support. It supports PIC10®, dsPIC30/33®, PIC24® and PIC32® devices in a single programmer. It supports over 570 microcontrollers from Microchip®. Outstanding performance, easy operation and elegant design are its key features.

You can also program it with ICD2® or ICD3® if you reroute the wires like shown here.

Figure 3-9: mikroProg connector

### mikroProg Suite for dsPIC<sup>®</sup> software

mikroProg programmer requires special programming software called mikroProg Suite for dsPIC<sup>®</sup>. This software is used for programming of ALL Microchip® microcontroller families, including PIC10®, PIC12®, PIC16°, PIC18°, dsPIC30/33°, PIC24° and PIC32<sup>®</sup>. Software has intuitive interface and SingleClick<sup>™</sup> programming technology. Just by downloading the latest version of mikroProg Suite your programmer is ready to program new devices. mikroProg Suite is updated regularly, at least four times a year, so your programmer will be more and more powerful with each new release.

### 4. Buttons and LEDs

The board also contains a **01** reset button and a pair of 02 buttons and 03 LEDs, as well as an ON/OFF switch. The RESET button is used manually reset tn the microcontrollergenerates a low it voltade level the nn microcontroller's reset pin. LEDs can be used for visual indication of the logic state on two pins (RAO and RG9). An active LED indicates that a logic high [1] is present on the pin. Pressing any of the two buttons can change the logic state of the microcontroller pins (T2 and T3) from logic high (1) to logic low (0).

> Figure 4-1: Two LEDs, two buttons and a reset button

### **5.** Power management and battery charger

### 6. Oscillators

Board is equipped with 8MHz crystal oscillator [X1] circuit that provides external clock waveform to the microcontroller OSC1 and OSC2 pins. This base frequency is suitable for further clock multipliers and ideal for generation of necessary USB clock, which ensures proper operation of bootloader and your custom USB-based applications. And the 32. TK MHz oscillator [X2], a Real-Time Clock and Calendar (RTCC) module.

Figure 6-1: 8MHz crystal oscillator module (X1) and 32.768 KHz crystal oscillator

### 7. USB connection

dsPIC33 microcontrollers has an integrated USB module, which enables you to implement USB communication functionality to your clicker 2 board. Connection with target USB host is done over a micro USB connector which is positioned next to the battery connector.

## 9. click boards<sup>™</sup> are plug and play!

Up to now, MikroElektronika has released more than 300 mikroBUS™ compatible click boards™. On the average, three click boards are released per week. It is our intention to provide you with as many add-on boards as possible, so you will be able to expand your development board with additional functionality. Each board comes with a set of working example code. Please visit the click boards™ webpage for the complete list of currently available boards:
