

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

8-Channel Analog Multiplexer •

Dual 4-Channel Analog Multiplexer •

Triple 2-Channel Analog Multiplexer

General Description

The MM74HC4051, MM74HC4052 and MM74HC4053 multiplexers are digitally controlled analog switches implemented in advanced silicon-gate CMOS technology. These switches have low "on" resistance and low "off" leakages. They are bidirectional switches, thus any analog input may be used as an output and vice-versa. Also these switches contain linearization circuitry which lowers the on resistance and increases switch linearity. These devices allow control of up to $\pm 6V$ (peak) analog signals with digital control signals of 0 to 6V. Three supply pins are provided for V_{CC} , ground, and V_{EE} . This enables the connection of 0-5V logic signals when $V_{CC} = 5V$ and an analog input range of $\pm 5V$ when $V_{EE} = 5V$. All three devices also have an inhibit control which when HIGH will disable all switches to their off state. All analog inputs and outputs and digital inputs are protected from electrostatic damage by diodes to V_{CC} and ground.

MM74HC4051: This device connects together the outputs of 8 switches, thus achieving an 8 channel Multiplexer. The binary code placed on the A, B, and C select lines determines which one of the eight switches is "on", and connects one of the eight inputs to the common output.

MM74HC4052: This device connects together the outputs of 4 switches in two sets, thus achieving a pair of 4-channel multiplexers. The binary code placed on the A, and B select lines determine which switch in each 4 channel section is "on", connecting one of the four inputs in each section to its common output. This enables the implementation of a 4-channel differential multiplexer.

MM74HC4053: This device contains 6 switches whose outputs are connected together in pairs, thus implementing a triple 2 channel multiplexer, or the equivalent of 3 single-pole-double throw configurations. Each of the A, B, or C select lines independently controls one pair of switches, selecting one of the two switches to be "on".

Features

- Wide analog input voltage range: $\pm 6V$
- Low "on" resistance:
50 typ. ($V_{CC}-V_{EE} = 4.5V$)
30 typ. ($V_{CC}-V_{EE} = 9V$)
- Logic level translation to enable 5V logic with $\pm 5V$ analog signals
- Low quiescent current: 80 μA maximum (74HC)
- Matched Switch characteristic

Ordering Code:

Order Number	Package Number	Package Description
MM74HC4051M	M16A	16-Lead Small Outline Integrated Circuit (SOIC), JEDEC MS-012, 0.150" Narrow

Absolute Maximum Ratings^(Note 1)

(Note 2)

						Min	Max	Units
Supply Voltage (V_{CC})		-0.5 to +7.5V						
Supply Voltage (V_{EE})		+0.5 to -7.5V				2	6	V
Control Input Voltage (V_{IN})		-1.5 to V_{CC} +1.5V				0	-6	V
Switch I/O Voltage (V_{IO})	V_{EE}	-0.5 to V_{CC} +0.5V						
Clamp Diode Current (I_{IK}, I_{OK})		±20 mA				0	V_{CC}	V
Output Current, per pin (I_{OUT})		±25 mA						
V_{CC} or GND Current, per pin (I_{CC})		±50 mA						
Storage Temperature Range (T_{STG})		-65°C to +150°C						
Power Dissipation (P_D)								
(Note 3)		600 mW						
S.O. Package only		500 mW						
Lead Temperature (T_L)								
(Soldering 10 seconds)		260°C						

Recommended Operating Conditions

Supply Voltage (V_{CC})	2	6	V
Supply Voltage (V_{EE})	0	-6	V
DC Input or Output Voltage (V_{IN}, V_{OUT})	0	V_{CC}	V
Operating Temperature Range (T_A)	-40	+85	°C
Input Rise or Fall Times (t_r, t_f)			
$V_{CC} = 2.0V$	1000	ns	
$V_{CC} = 4.5V$	500	ns	
$V_{CC} = 6.0V$	400	ns	

Note 1: Absolute Maximum Ratings are those values beyond which damage to the device may occur.

Note 2: Unless otherwise specified all voltages are referenced to ground.

Note 3: Power Dissipation temperature derating — plastic "N" package: -12 mW/°C from 65°C to 85°C.

		$V_{IS} = V_{EE} \text{ or } V_{CC}$	-6.0V	6.0V		± 0.1	± 1.0	± 1.0	μA
		$V_{INH} = V_{IH}$							

Note 4: For a power supply of $5V \pm 10\%$ the worst case on resistances (R_{ON}) occurs for HC at 4.5V. Thus the 4.5V values should be used when designing with this supply. Worst case V_{IH} and V_{IL} occur at $V_{CC} = 5.5V$ and 4.5V respectively. (The V_{IH} value at 5.5V is 3.85V.) The worst case leakage current occur for CMOS at the higher voltage and so the 5.5V values should be used.

Note 5: At supply voltages ($V_{CC} - V_{EE}$) approaching 2V the analog switch on resistance becomes extremely non-linear. Therefore it is recommended that these devices be used to transmit digital only when using these supply voltages.

Typical Performance Characteristics

Typical "On" Resistance vs Input Voltage

$V_{CC} = -V_{EE}$

Special Considerations

In certain applications the external load-resistor current may include both V_{CC} and signal line components. To

avoid drawing V_{CC} current when switch current flows into the analog switch pins, the voltage drop across the switch must not exceed 1.2V (calculated from the ON resistance).

LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
