

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Clock Generator for PowerQUICC III

MPC9865

The MPC9865 is a PLL based clock generator specifically designed for Freescale Microprocessor and Microcontroller applications including the PowerPC and PowerQUICC. This device generates a microprocessor input clock. The microprocessor clock is selectable in output frequency to any of the commonly used microprocessor input and bus frequencies. The device offers eight low skew clock outputs in two banks, each configurable to support different clock frequencies. The extended temperature range of the MPC9865 supports telecommunication and networking requirements.

Features

- 8 LVCMOS outputs for processor and other circuitry
- Crystal oscillator or external reference input
- 25 or 33 MHz Input reference frequency
- Selectable output frequencies include = 200, 166, 133, 125, 111, 100, 83, 66, 50, 33, or 16 MHz
- Buffered reference clock output (2 copies)
- Low cycle-to-cycle and period jitter
- 100-lead PBGA package
- 100-lead Pb-free package available
- 3.3 V supply with 3.3 V or 2.5 V LVCMOS output supplies
- Supports computing, networking, telecommunications applications
- Ambient temperature range -40°C to $+85^{\circ}\text{C}$

Functional Description

The MPC9865 uses either a 25 or 33 MHz reference frequency to generate 8 LVCMOS output clocks, of which, the frequency is selectable from 16 MHz to 200 MHz. The reference is applied to the input of a PLL and multiplied to 2 GHz. Output dividers, divide this frequency by 10, 12, 15, 16, 18, 20, 24, 30, 40, 60, or 120 to produce output frequencies of 200, 166, 133, 125, 111, 100, 83, 66, 50, 33, or 16 MHz. The single-ended LVCMOS outputs provide 8 low skew outputs for use in driving a microprocessor or microcontroller clock input as well as other system components. The input reference, either crystal or external input is also buffered to a separate dual outputs that may be used as the clock source for a Ethernet PHY if desired.

The reference clock may be provided by either an external clock input of 25 or 33 MHz. An internal oscillator requiring a 25 MHz crystal for frequency control may also be used. The external clock source may be applied to either of two clock inputs and selected via the CLK_SEL control input. Both single ended LVCMOS and differential LVPECL inputs are available. The crystal oscillator or external clock input is selected via the input pin of XTAL_SEL. Other than the crystal, no external components are required for crystal oscillator operation. The REF_33 MHz configuration pin is used to select between a 33 and 25 MHz input frequency.

The MPC9865 is packaged in a 100 lead MAPBGA package to optimize both performance and board density.

OPERATION INFORMATION

Output Frequency Configuration

The MPC9865 was designed to provide the commonly used frequencies in PowerQUICC, PowerPC and other microprocessor systems. **Table 3** lists the configuration values that will generate those common frequencies. The MPC9865 can generate numerous other frequencies that may be useful in specific applications. The output frequency (f_{out}) of either Bank A or Bank B may be calculated by the following equation.

$$f_{out} = 2000 / N$$

where f_{out} is in MHz and $N = 2 * CLK_x[0:5]$

This calculation is valid for all values of N from 8 to 126. Note that N = 15 is a modified case of the configuration inputs

CLK_x[0:5]. To achieve N = 15 CLK_x[0:5] is configured to 00111 or 7.

Crystal Input Operation

TBD

Power-Up and \overline{MR} Operation

Figure 2 defines the release time and the minimum pulse length for \overline{MR} pin. The \overline{MR} release time is based upon the power supply being stable and within V_{DD} specifications. See **Table 9** for actual parameter values. The MPC9865 may be configured after release of reset and the outputs will be stable for use after lock indication is obtained.

Figure 2. \overline{MR} Operation

Power Supply Bypassing

The MPC9865 is a mixed analog/digital product. The architecture of the MPC9865 supports low noise signal operation at high frequencies. In order to maintain its superior signal quality, all V_{DD} pins should be bypassed by high-frequency ceramic capacitors connected to GND. If the spectral frequencies of the internally generated switching noise on the supply pins cross the series resonant point of an individual bypass capacitor, its overall impedance begins to look inductive and thus increases with increasing frequency. The parallel capacitor combination shown ensures that a low impedance path to ground exists for frequencies well above the noise bandwidth.

Figure 3. V_{CC} Power Supply Bypass

Power Consumption Calculation

For unloaded outputs the power consumption of the MPC9865 can be calculated as follows.

$$P = V_{DD} * I_{DDBASE} + n_A * (V_{DDOA} ** 2 * C_{PD} * f_A) + n_B * (V_{DDOB} ** 2 * C_{PD} * f_B)$$

where

- V_{DD} = core supply voltage
- I_{DDBASE} = base supply current
- n_A = number of A bank outputs (= 4)
- n_B = number of B bank outputs (= 4)
- V_{DDOA} = voltage supply on bank A outputs
- V_{DDOB} = voltage supply on bank B outputs
- C_{PD} = power dissipation capacitance
- f_A = frequency of bank A outputs
- f_B = frequency of bank B outputs

Table 4. Absolute Maximum Ratings⁽¹⁾

Symbol	Characteristics	Min	Max	Unit	Condition
V _{DD}	Supply Voltage (core)	-0.3	3.8	V	
V _{DDA}	Supply Voltage (Analog Supply Voltage)	-0.3	V _{DD}	V	
V _{DDOx}	Supply Voltage (LVCMOS output for Bank A and B)	-0.3	V _{DD}	V	
V _{IN}	DC Input Voltage	-0.3	V _{DD} +0.3	V	
V _{OUT}	DC Output Voltage ⁽²⁾	-0.3	V _{DDx} +0.3	V	
I _{IN}	DC Input Current		±20	mA	
I _{OUT}	DC Output Current		±50	mA	
T _S	Storage Temperature	-65	125	°C	

1. Absolute maximum continuous ratings are those maximum values beyond which damage to the device may occur. Exposure to these conditions or conditions beyond those indicated may adversely affect device reliability. Functional operation at absolute-maximum-rated conditions is not implied.
2. V_{DDx} references power supply pin associated with specific output pin.

Table 5. General Specifications

Symbol	Characteristics	Min	Typ	Max	Unit	Condition
V _{TT}	Output Termination Voltage		V _{DD} ÷ 2		V	
C _{IN}	Input Capacitance		4		pF	Inputs

I _{DDA}	Maximum Quiescent Supply Current (Analog Supply)			TBD	mA	V _{DDIN} pins

Table 7. LVPECL DC Characteristics ($T_A = -40^\circ\text{C}$ to 85°C)⁽¹⁾

Symbol	Characteristics	Min	Typ	Max	Unit	Condition
Differential LVPECL Clock Inputs (CLK1, $\overline{\text{CLK1}}$) for $V_{DD} = 3.3\text{ V} \pm 0.5\%$						
V_{PP}	Differential Voltage ⁽²⁾ (peak-to-peak) (LVPECL)	250			mV	
V_{CMR}	Differential Input Crosspoint Voltage ⁽³⁾ (LVPECL)	1.0		$V_{DD} - 0.6$	V	

1. AC characteristics are design targets and pending characterization.

2. V_{PP} is the minimum differential input voltage swing required to maintain AC characteristics including t_{PD} and device-to-device skew.

3. V_{CMR} (AC) is the crosspoint of the differential input signal. Normal AC operation is obtained when the crosspoint is within the V_{CMR} (AC) range and the input swing lies within the V_{PP} (AC) specification. Violation of V_{CMR} (AC) or V_{PP} (AC) impacts the device propagation delay, device and part-to-part skew.
