# Subminiature Coaxial Switch 1.2 mm High, DC to 11 GHz

## MS-166 Series

Space-saving design  
 Low profile -1.2 mm protrusion above the board.  
 Lightweight -0.016 g. total weight.

### Overview

Developed for inspection of high frequency circuits used in portable terminals. Verification of the circuit performance is accomplished by simply inserting the external plug in the board mounted receptacle. This action re-directs the circuit from normal condition to the plug side. Removing the plug restores circuit to its normal condition.

### Features

#### 1. Low insertion loss

- 0.15 dB typical at 2.5 GHz (not mated with the plug).
- 0.2 dB typical at 6 GHz (not mated with the plug).
- 0.4 dB typical at 11 GHz (not mated with the plug).

#### 2. Space-saving design

2.3 mm x 2.3 mm occupied board space.

#### 3. Low profile

1.2 mm protrusion above the board.

#### 4. Lightweight

0.016 g. total weight (without vacuum cap).

#### 5. Miniaturization of Equipment Holes

The outside diameter of the tip of the plug connectors is a narrow 2.8 mm which permits a great reduction in the size of the equipment holes.

#### 6. Durability

50 mating/unmating cycles, with corresponding plug.

#### 7. Performs over a wide frequency range

Applicable frequencies range over a wide band, from DC to 11 GHz.

#### 8. Board placement with automatic equipment

Packaged on tape-and-reel. Also available with a vacuum pick-up cap over each switch.

#### 9. RoHS compliant

All components and materials comply with the requirements of the EU Directive 2002/95/EC.

### Applications

Portable terminals, ETC, notebook computers (Bluetooth), wireless LAN, POS terminals, GPS terminals, PDA, and any small devices requiring verification of antenna/circuit performance.

## ◆ Precautions

1. Do not use the washing process.
2. This product is intended to be used for circuit inspection only. Consult us if any other application is considered.
3. Plugs can be roughly classified to two types.
  - For mass production line automatic check (Press down type)
  - For manual check (With retentive lock) : Unable to be used at production line.
4. Do not use hand soldering for mounting of MS-166.  
Doing so could result in solder and flux wicking to the contact areas.
5. When using a heat gun, hot plate, or similar methods, limit the temperature to 260°C applied for 10 seconds max.
6. Cross-hatched area shown on the PCB mounting pattern must be free of any conductive traces. Placing conductive traces in this area may affect performance and will void product warranties. When the bottom surface of the product (i.e., the  shaded area of the specified land dimensions diagram on the previous page) has been processed with a substrate copper trace and resist processing, Hirose Electric will not be able to warrant the product.
7. Please refrain from using the product in environments specifically affected by excessive vibration, shock, dust, high humidity, gases, very high temperatures and very low temperatures such as outdoor equipment. It might cause degradation or destruction of the product. Even if it endures during a short time, long time quarification is not quaranteed.
8. Exercise caution as not to allow any debris to enter the board mounted MS-166 when cutting PCB.
