Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

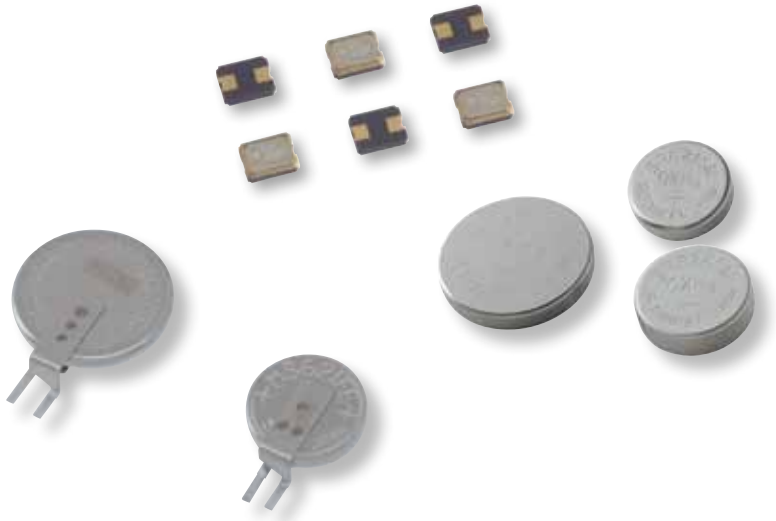
SEIKO
SEIKO HOLDINGS GROUP

Micro Battery



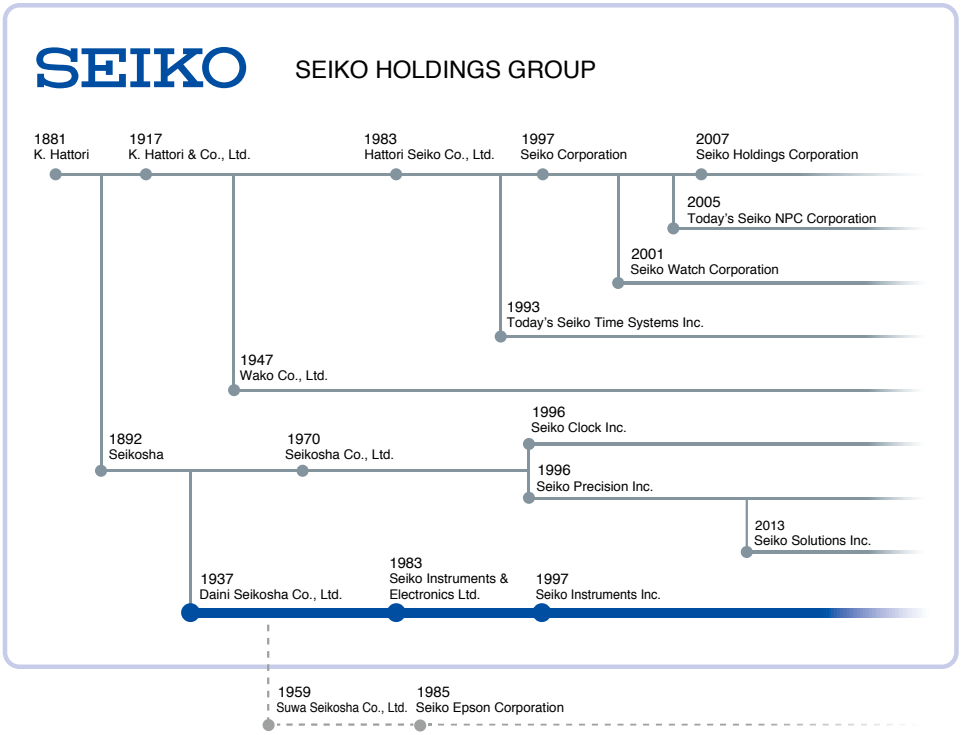
Seiko Instruments Inc.

Creating Time - Optimizing Time - Enriching Time

Seiko Instruments Inc. (SII), founded in 1937 as a member of the Seiko Group specializing in the manufacture of watches, has leveraged its core competency in high precision watches to create a wide range of new products and technologies.

Over the years SII has developed high-precision processed parts and machine tools that pride themselves on their sub-micron processing capability, quartz crystals that came about as a result of our quartz watch R&D, and electronic components such as micro batteries. Optimizing our extensive experience and expertise, we have since diversified into such new fields as compact, lightweight, exceedingly quiet thermal printers, and inkjet printheads, a key component in wide format inkjet printers for corporate use.

SII, in the years to come, will maintain an uncompromised dedication to its time-honored technologies and innovations of craftsmanship, miniaturization, and efficiency that meet the needs of our changing society and enrich the lives of those around us.



CONTENTS

PRECISION, CRAFTSMANSHIP and MINIATURIZATION

Leveraging Watch Making Technology

With Precision, we apply our Craftsmanship to provide Miniaturization advantages to customers' product development around the world.

Electronic Components and High-performance Materials

SII's electronic components were originally derived from the development and manufacturing of quartz watches.

Since 1953

No corrosion, strong, ultra high elasticity Co-Ni alloy product

"SPRON"

The sophisticated metal product, "SPRON", was born as a material to be used in a "mainspring", which is a drive source of mechanical watches. "SPRON" has been used for over 50 years as a drive source of watches by utilizing its high elasticity, high strength, and high heat resistance. Evaluated highly for its corrosion resistance and durable quality, "SPRON" is used for key devises in various fields like valves in semiconductor manufacturing equipment and dental treatment devices.

Since 1975

Small and powerful Silver Oxide Battery

Silver Oxide Battery "SEIZAIKEN"

A small-sized primary battery that features a large electrical capacity and almost no voltage drop until the last stage of electrical discharge even though its minimum diameter is 4 mm. Since the birth of quartz watches, we have developed batteries to increase their electrical capacity. We have also pursued better leakage resistance and long term reliability characteristics. It is expected to be used as a power supply for disposable, wearable, IoT, and the low energy Bluetooth products.

Since 1976

Precise Timing for Electronic Devices

Tuning Fork Quartz Crystal Resonator

Tuning Fork Quartz Crystal Resonators were developed as the basis for accuracy in the Quartz Watch. Our high quality and reliability was prioritized to meet the stringent requirements for watches. Recent demand in IoT developments where devices are required to operate with low power consumption and accurate communication protocol timing have increased the demand for smaller components with the same rugged reliability as is required in watches. For applications which require absolute lowest power consumption, our Timing Crystals are available in our Low CL specifications.

Since 1979

Excellent heat and corrosion resistance

Samarium-cobalt Magnet "DIANET"

"DIANET", which has its origin in rotor magnets of quartz watches, has superior heat resistance and strong magnetic force even though its outside diameter is only 1 mm or less. The Sendai Unit acquired ISO/TS16949 Quality Management System for the automotive production industry. "DIANET" is used for a wide range of automotive products, and its advanced quality and performance are highly recognized. In addition, "DIANET" is also used in actuators of cameras for smart phones and medical devices.

Since 1988

Stable and reliable

Rechargeable Battery and Capacitor

The rechargeable batteries supporting a wide temperature range of -40°C to 85°C are available in our lineup. They are suitable for operating very low power consumption devices, for backup power supply of clock and memory functions of a wide range of products. The capacitor will correspond to the new needs of energy harvesting devices. Capacitors are extremely useful in various applications.

Micro battery Products Lineup

Our rechargeable batteries, capacitors and silver oxide batteries are available in various sizes for broad range of applications.

Lithium Rechargeable Battery Features

- Excellent cycle characteristics
- Available in many compact sizes
- Wide Temperature Range (MS-T)

Capacitor Features

- Reflowable and high reliability
- Super small and thin size
- High output and Low ESR (CPX)

Silver Oxide Battery Features

- Stable output voltage
- Available in many sizes of ϕ11mm or less
- High capacity and High output

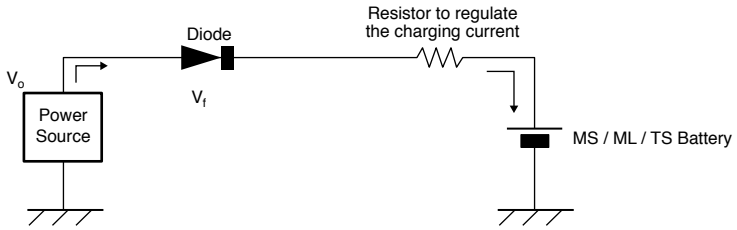
Charging circuit for MS / ML / TS Lithium Rechargeable Battery



The charging voltage "Vo" must Not be higher than 3.3V (MS series) / 3.1V (ML414H) / 3.0V (TS series).
A resistor must be inserted to regulate the charging current, because our rechargeable batteries have a limit for charging current.
Please see the below table for recommended resister values.
Those values are minimum for each battery type and "Vo" in the charging circuit.
The following table lists the recommended resistance values. For example, MS614SE and Vo 3.3V, the resister value should be 620 ohm or more.

Discharge capacity depends on charging voltage.
Lower charging voltage may cause lower discharge capacity.
Please see Charge Voltage Characteristics data in respective battery pages.

Charging circuit for CPH / CPX capacitor

You do not need to insert a resister to regulate charging current.
Our CPH / CPX capacitor do not have a limit for charging current.
The charging voltage "Vo" must Not be higher than 3.3V (CPH3225A) / 2.6V (CPX3225A).

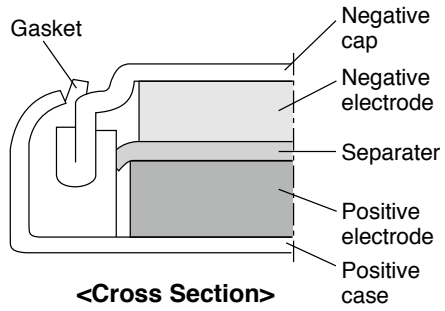
MS412FE / MS414GE / MS518SE / MS614SE / MS621FE / MS920SE

MS (Manganese Silicon) lithium rechargeable batteries, developed by SII, use silicon oxide as the anode and a lithium manganese composite oxide as the cathode. As a result, they offer long cycle life and highly stable overdischarge characteristics.



<Cross Section>

FEATURES

- Large discharge capacity :
  For high operational voltage range of 3.3V to 2.0V.
- Long cycle life :
  Cycle life of over 100 cycles (over 50 cycles for MS414GE) under charge/discharge conditions of 3.1V to 2.0V (D.O.D.100%).
- Excellent overdischarge characteristics :
  Continued stable capacity characteristics even after the battery is overdischarged down to 0.0V.
- Operation over a wide temperature range:
  Operating temperature range : –20°C to +60°C
  Consult us for using the battery at a temperature beyond the above temperature range.
- RoHS Compliant
- Approved by UL (Underwriters Laboratories Inc.)
  UL File No. MH15628

APPLICATIONS

Backup power for Real Time Clock, or memory.
E.g. Security Camera, Digital Camera, Action Camera, GPS equipments, Event Data Recorder, Handy Terminal, PC, Smart phone.

*1. Nominal capacity: Typical value of discharge capacity between 3.1V and 2.0V
*2. Internal impedance is measured using an AC (Alternating Current) method at the fully charged state.
*3. Maximum discharge current indicates the value of a current for approximately 50% of the nominal capacity.
*4. Cycle Life indicates the times charge/discharge is repeated for approximately 50% of the capacity values in the specification sheet.
*5. 100% and 20% are based on nominal capacity.
*6. A constant voltage charge is recommended, but due to a limit in charge current, it is necessary to insert a resistor to regulate the charge current.
Please see Page 7 for resister value. Contact us for further details.
If a constant current charge is required, contact us for more information.

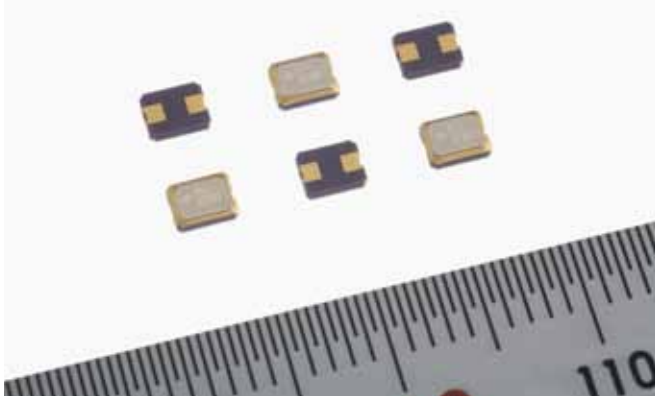
CPH3225A

CPH3225A is thinnest and smallest chip-type electric double layer capacitor.
The unique ceramic packaging with superior air-tightness is used. As the result, it offers leakage resistance and humidity resistance. Also, by optimizing its materials, a 1 minute rapid charge stores approximately 85% of full capacity.
Its heat-resistant design allows for Pb-free reflowable SMT board attachment.



FEATURES

- Small and thin size
- Excellent leakage resistance and humidity resistance
- Reflowable:
  Superior heat resistance allows reflow soldering
- Long cycle Life:
  At least 10,000 times of charge/discharge
- Simple Charging circuit (constant voltage charging)
- Wide operating temperature range:

⚠CAUTION

1. Prohibition ripple charging
A ripple (high frequency fluctuation of voltage) in the charge voltage extremely lowers the capacitor performance.
Be sure to charge capacitors with a stable voltage.

2. Charge voltage
The age deterioration of the capacitor depends on the charge voltage.
The age deterioration is accelerated as charge voltage goes higher.

3. Usage environment
Aging degradation of the capacitor varies depending on the usage environment (temperature and humidity).

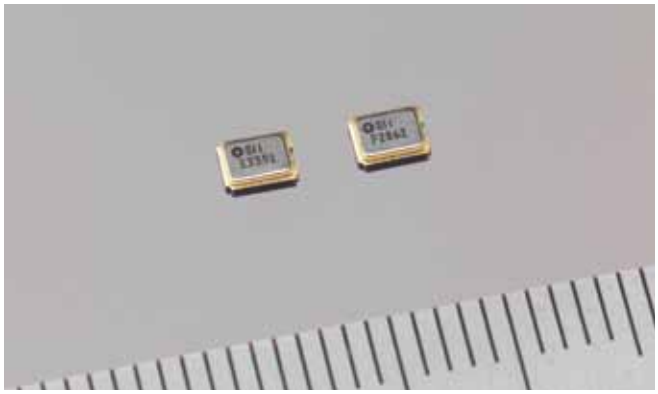
Reflowable

CPX3225A

Chip-type Electric Double Layer Capacitor (EDLC), CPX series offers low internal impedance and very small leak current.
CPX Capacitors allow discharge current up to several tens of mAs, and super rapid charging by small electromotive force.



FEATURES

- Large discharge current and super rapid charging achieved by low internal impedance
- Small leak current
  CPX capacitor allows sufficient charging with several micro watts of energy harvesting power source.
- Long life span, high reliability
  Superior air-tight ceramic package reduces storage eterioration in high temperature / high humidity environments, assuring long term reliability.
- Reflowable, small and thin
  The chip-type design makes it possible to reflow.

APPLICATIONS

- Power backup of instantaneous battery detachment
- Power assist for main battery
- Electric storage device for energy harvesting
- Peak load leveling of primary battery
  E.g. Handy terminals, Payment terminals, Wireless sensor network devices, NFC-enabled mobile devices, Battery powered medical devices, etc.

Non-Reflowable

SEIZAIKEN, Mercury Free Silver Oxide Batteries by SII, has grown with the history of quartz watches. Silver Oxide Batteries have high density of energy per volume and are able to supply stable voltage for a long time. SEIZAIKEN Batteries are suitable to power BLE(Bluetooth Low Energy), wearable devices, and information devices.

FEATURES

- Stable power voltage
- Large energy density
- Able to discharge mA level of pulse current
- Lineup of small diameter (11.6mm and less)

APPLICATIONS

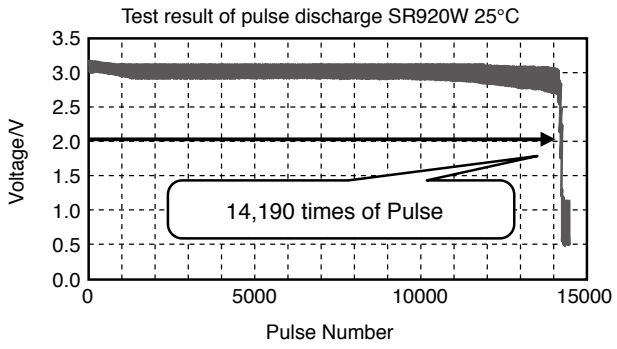
Devices that require high discharge pulsing such as stylus pen for tablets, disposable devices, thermometers, etc.

Type	Nominal Voltage (V)	Nominal Capacity (mAh)	Discharge Level	Dimensions (mm)		Weight (g)
				Diameter	Height	
SR**SW	1.55	5.5 to 160	Low current	4.8 to 11.6	1.25 to 5.40	0.11 to 2.20
SR**W	1.55	26 to 160	High current	6.8 to 11.6	2.05 to 5.40	0.39 to 2.20

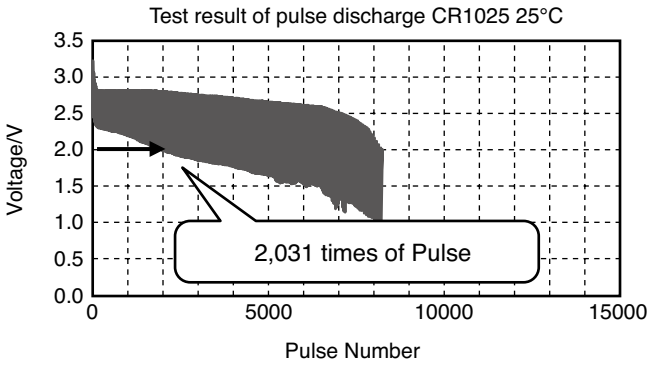
CHARACTERISTICS

Comparisons at 10mA for 1sec Pulse Discharge and c.o.v. 2.0V

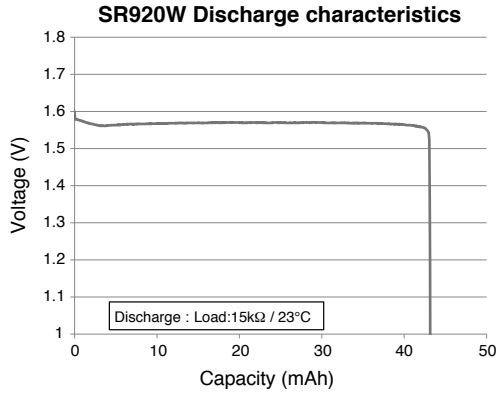
SR920W (2 pcs in series)



CR1025



Discharge Characteristics



SEIZAIKEN is our trademark for silver oxide battery globally acknowledged in the quartz watch market.

CHECK SHEET

If you are considering the purchase of one or more of our microbatteries or capacitors, please complete this check sheet and send it to us.
We will let you know which products will be optimum for you to use.

1. Products of interest
   ☐ Rechargeable Battery ☐ Capacitor (CPH3225A) ☐ Capacitor (CPX3225A) ☐ Silver Oxide Battery

2. Application circuits

   _____

3. Applications
   ☐ As a power supply backup. ☐ As a main power supply.
   If for backup power supply, load device is: ☐ RTC (Realtime clock) ☐ Other

4. Current consumption of load device

   _____μA / mA

5. Minimum operating voltage of load device

   _____V

6. Required discharge time

   _____second / ms / μs (If for pulsed discharging)

   _____minute / hour / day / month (If for loads such as main power applications, RTC backup power, etc.)

7. Usage environment temperature

8. Mounting
   ☐ Reflow mounting required ☐ Reflow mounting not required

9. Service life of application

10. Desired charge voltage and charge time for rechargeable batterys and capacitors

    _____V, _____hour

Environmental Activities at Micro-Energy Division

Environment & Quality Policy

Seiko Instruments Inc., Micro-Energy Division is located in Ayashi, a city with beautiful nature, in Miyagi Prefecture. Our aim is to provide customer satisfaction and harmony with the environment through all our products, from Micro battery to other electronic products, and sales activities.

1. We adhere firmly to laws, regulations and customers' specified requirements.
2. We aim to prevent pollution, to reduce CO_2, and to conserve biodiversity.
3. We set goals, take actions, conduct regular reviews, and improve the system and performance continuously.
4. We contribute to the society by supporting green procurement, developing green products, and promoting green life activity.
5. We adhere to regulations and recommodations regarding Chemical substance content in our products and will promote reduction and replacement.
6. We vigorously educate ourselves and try to engage voluntarily in green life activity.

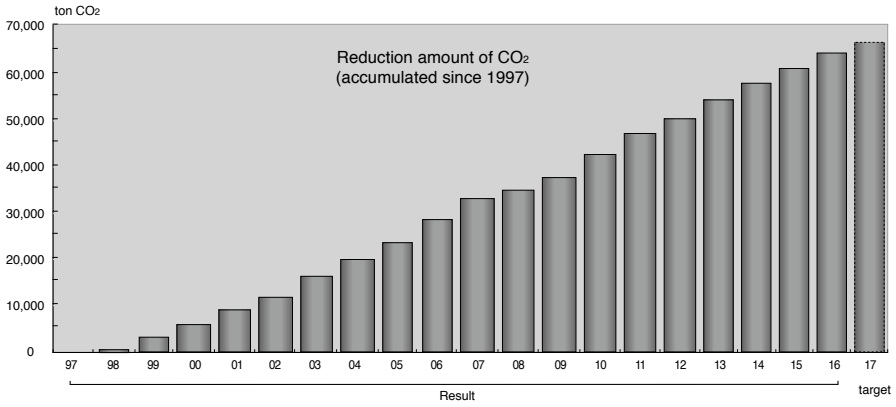
Based on the above policy, the following six environmental approaches are now being implemented throughout Micro-Energy Division.

1. Enrich the line up of Eco-Products

- We introduced the SII Green Product Label System which is equivalent to the ISO 14021 Type II environmental label. At the end of FY2006, 100% of our products are certified as SII Green Products. In addition, 42 products are certified as SII "High Grade" Green Products.

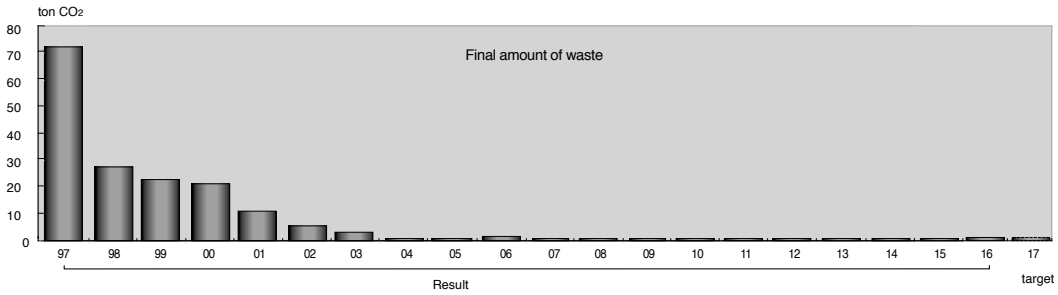
2. Reduction of Greenhouse Gas

- We practice various CO2 reduction measures like using Eco-machinery. Since 1997, we have successfully reduced a total of 62,800 tons of CO2. We believe our efforts contribute to the prevention of global warming.



3. 3R Promotion Activity

- We have promoted the "reduce and reuse" activities and also promoted recycling at the end of the production process. With these activities, we achieved "Zero-emission" in 2004. We have reduced the non-recyclable wastes to less than 1 ton - less than 1% of our 1997 results.



4. Biodiversity Conservation

- We endeavor to deepen our understanding on the relevancy between biodiversity and our business activities, and to contribute to the conservation of biodiversity by participating local community activities.

5. Green Purchasing

- We adhere to a green purchasing campaign through the purchase of ingredients, manufacturing materials, and other necessary products, whenever appropriate.

6. Green Life

- With the participation of all of Micro-Energy Division members, we deploy a clean-up and beautification campaign in all areas surrounding our factory once a year. In addition, we participate in the clean up activity at Hirose River once a year.

7. Conflict Minerals

- Recognizing the international importance of conflict minerals issue, we prohibit the use of such minerals.
