# imall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from, Europe, America and south Asia, supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts, Customers Priority, Honest Operation, and Considerate Service", our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip, ALPS, ROHM, Xilinx, Pulse, ON, Everlight and Freescale. Main products comprise IC, Modules, Potentiometer, IC Socket, Relay, Connector. Our parts cover such applications as commercial, industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

### **NB6L239MNEVB Evaluation Board User's Manual**

#### **ON Semiconductor®**

http://onsemi.com

#### EVAL BOARD USER'S MANUAL

#### Description

The NB6L239 Evaluation Board was designed to provide a flexible and convenient platform to quickly evaluate, characterize and verify the performance and operation of the NB6L239. This user's manual provides detailed information on board contents, layout and its use. It should be used in conjunction with the NB6L239 data sheet: (www.onsemi.com).

The NB6L239 is a differential Receiver to differential LVPECL Clock Divider. The board features Output Enable control of the Outputs.

#### **Board Features**

- Accommodates the electrical characterization of the NB6L239
- Selectable Jumper for the VT pin, minimizing cabling
- CLK/CLK input and QA/QA and QB/QB output pins are accessed via SMA connectors
- MR, EN and Clock Divide Select pins are accessed via SMA Connectors or by the Logic Switches
- Convenient and compact board layout
- 2.5 V, 3.3 V Power Supply Operating Range

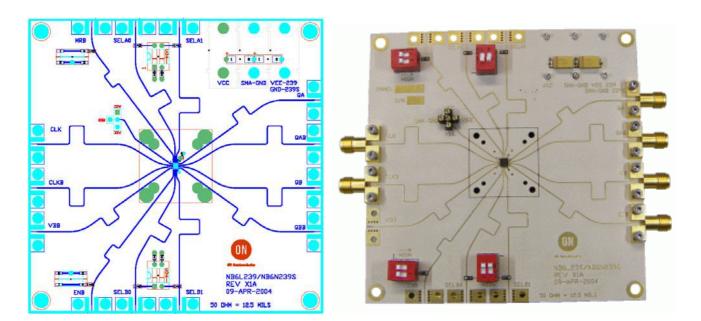

Figure 1. Evaluation Board

1

#### PROCEDURE

#### Lab Setup and Measurement Procedure Equipment Used

- Agilent Signal Generator #8133A
- Tektronix TDS8000 Oscilloscope
- Agilent #6624A DC Power Supply
- Digital Voltmeter
- Matched High-Speed Cables with SMA Connectors

#### **Power Supply Connections**

The NB6L239 has a positive supply pin,  $V_{CC}$ , and a negative supply pin,  $V_{EE}$ . SMAGND =  $V_{TT} = V_{CC} - 2.0 \text{ V}$  is the termination supply for the LVPECL outputs, only.

Power supply terminals  $V_{CC}$ ,  $V_{EE}$  and SMAGND are provided. The SMAGND terminal is for the isolated SMA connector GROUND plane, and is not to be confused with a device  $V_{EE}$  pin. Since SMAGND =  $V_{TT} = V_{CC} - 2.0$  V, is the termination supply for the LVPECL outputs, by offsetting  $V_{CC}$  by +2.0 V yields  $V_{TT} = 0$  V or Ground. A "split" or dual power supply technique can be used to take advantage of terminating the PECL outputs into 50  $\Omega$  to Ground of an oscilloscope or a frequency counter. (see AND8020/D for more information on terminating ECL).

Table 1. POWER SUPPLY CONFIGURATIONS

Device Pin	Power Supply Connector Color	"Spilt" Power Supply	
V <sub>CC</sub>	RED	V <sub>CC</sub> = +2.0 V	
_	BLACK – SMAGND	$V_{TT} = V_{CC} - 2 V = 0 V$	
V <sub>EE</sub> – 239	YELLOW	V <sub>EE</sub> = -1.3 V (or -0.5 V)	

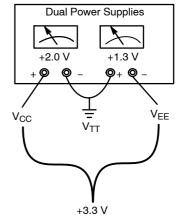

Figure 2. "Split" or Dual Power Supply Connections

#### NB6L239

To monitor the  $QA/\overline{QA}$  and  $QB/\overline{QB}$  outputs on an oscilloscope, the power supply needs to be DC offset:

- 1. Connect a "split" power supply to the evaluation board. (Figure 1) Connect V<sub>CC</sub> to +2.0 V
  - Connect SMAGND to 0 V Connect  $V_{EE}$  to -1.3 V for 3.3 V operation; or -0.5 V for 2.5 V operation
- 2. Ensure the oscilloscope is triggered properly and has 50  $\Omega$  termination to ground. The board does not provide 50  $\Omega$  source termination resistors. Trigger the oscilloscope from trigger output of signal generator.
- 3. Connect the LVPECL QA/ $\overline{QA}$  and QB/ $\overline{QB}$  outputs to the oscilloscope with matched cables. The outputs are terminated with 50  $\Omega$  to V<sub>TT</sub> (V<sub>CC</sub> - 2.0 V) = 0 V = Ground internal to the oscilloscope.

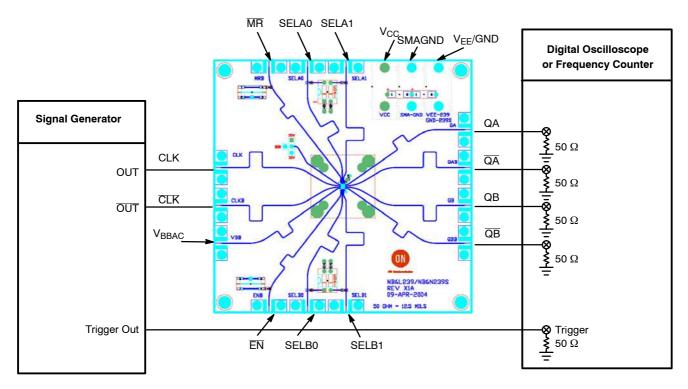

Figure 3. Evaluation Board

#### **Board Layout**

The evaluation board is constructed with Rogers material with 50  $\Omega$  trace impedances designed to minimize noise, achieve high bandwidth and minimize crosstalk.

#### Layer Stack

- L1 Signal (top) (Rogers)
- L2 SMA Ground
- L3  $V_{CC}$  and  $V_{EE}$  (positive and negative power supply)
- L4 Signal (bottom)

#### **Control and Select Pins**

The Control / Select pins,  $\overline{MR}$ , SELXn and  $\overline{EN}$ , can be accessed via the appropriate SMA connector. These pins can also be manually controlled by using the H/L switch. When using the switch, the SMA connector should be left open. When using the SMA connector, the switch must be in the "OPEN" position.

The SELXn and  $\overline{\text{EN}}$  device pins have internal pulldown resistors. The NB6L239 evaluation board was designed to take advantage of this attribute. When the SELXn and  $\overline{\text{EN}}$ switch is in the logic LOW position, the input pin "floats" to a logic LOW owing to the pulldown resistor; a logic LOW voltage is not forced on the pin. In the HIGH position, the switch forces the SELXn and  $\overline{\text{EN}}$  pin to the positive power supply rail, a logic HIGH.

The  $\overline{\text{MR}}$  device pin has an internal pullup resistor. When the  $\overline{\text{MR}}$  switch is in the logic HIGH position, the input pin "floats" to a logic HIGH owing to the pullup resistor; a logic HIGH voltage is not forced on the pin. In the LOW position, the switch forces the  $\overline{\text{MR}}$  pin to the negative power supply rail, a logic LOW.

#### V<sub>BB</sub> = V<sub>BBAC</sub>

 $V_{BB}$  labeled on the board is actually  $V_{BBAC} \mbox{ per the data}$  sheet.

#### VT

The  $V_T$  pin can be set to  $V_{CC}$ ,  $V_{EE}$  (239) GND (239S),  $V_{BB}$  or SMAGND by using a jumper.

#### V<sub>EE</sub> / GND

 $V_{EE}$  is the negative supply for the NB6L239. GND is the negative supply for NB6N239S.

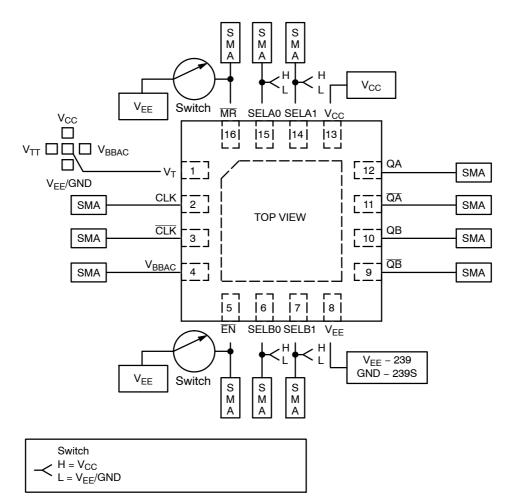

Pin # 16-QFN	Pin Name	I/O	Open Pin Default	Туре	Function
1	VT				Internal 100 $\Omega$ Center
2	CLK	Input		LVPECL, CML, LVDS, HSTL	Noninverted Differential CLOCK Input.
3	CLK	Input		LVPECL, CML, LVDS, HSTL	Inverted Differential CLOCK Input.
4	V <sub>BBAC</sub>	Output		Reference Voltage	Output Voltage Reference for Capacitor Coupled Inputs, Only.
5	EN	Input	L	LVCMOS/LVTTL Input	Synchronous Output Enable
6	SELB0	Input	L	LVCMOS/LVTTL Input	Clock Divide Select Pin
7	SELB1	Input	L	LVCMOS/LVTTL Input	Clock Divide Select Pin
8	V <sub>EE</sub>	Negative Power Supply			Negative Supply Voltage
9	<u>QB</u>	Output		LVPECL	Inverted Differential Output. Typically terminated with 50 $\Omega$ resistor to V_TT.
10	QB	Output		LVPECL	Noninverted Differential Output. Typically terminated with 50 $\Omega$ resistor to V <sub>TT</sub> .
11	QA	Output		LVPECL	Inverted Differential Output. Typically terminated with 50 $\Omega$ resistor to V_TT.
12	QA	Output		LVPECL	Noninverted Differential Output. Typically terminated with 50 $\Omega$ resistor to V_TT.
13	V <sub>CC</sub>	Positive Power Supply			Positive Power Supply
14	SELA1	Input	L	LVCMOS/LVTTL	Clock Divide Select Pin
15	SELA0	Input	L	LVCMOS/LVTTL Input	Clock Divide Select Pin
16	MR	Input	Н	LVCMOS/LVTTL Input	Master Reset Asynchronous, Default Open High, Asserted LOW
	EP	Negative Power Supply (opt)			The Exposed Pad on the QFN-16 package bottom is thermally connected to the die for improved heat transfer out of package. The pad is not electrically connected to the die, but is recommended to be electrically and thermally connected to $V_{EE}$ on the PC board.
