# 6-Channel Differential 1:2 Switch for PCle 2.0 and Display Port 1.1 

The NCN2612B is a 6-Channel differential SPDT switch designed to route PCI Express Gen2 and/or DisplayPort 1.1a signals. Due to the ultra-low ON-state capacitance ( 2.1 pF typ) and resistance ( $8 \Omega$ typ), this switch is ideal for switching high frequency signals up to a signal bit rate (BR) of 5 Gbps . This switch pinout is designed to be used in BTX form factor desktop PCs and is available in a space-saving 5x11x0.75 mm WQFN56 package. The NCN2612B uses $80 \%$ less quiescent power than other comparable PCIe switches.
