

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

NCS1002

Constant Voltage / Constant Current Secondary-Side Controller

Description

The NCS1002 is a highly integrated solution for Switching Mode Power Supply (SMPS) applications requiring a dual control loop to perform Constant Voltage (CV) and Constant Current (CC) regulation. The NCS1002 integrates a 2.5 V voltage reference and two precision op amps. The voltage reference, along with Op Amp 1, is the core of the voltage control-loop. Op Amp 2 is an independent, uncommitted amplifier specifically designed for the current control. Key external components needed to complete the two control loops are: (a) A resistor divider that senses the output of the power supply (battery charger) and fixes the voltage regulation set point at the specified value. (b) A sense resistor that feeds the current sensing circuit with a voltage proportional to the DC output current. This resistor determines the current regulation set point and must be adequately rated in terms of power dissipation. The NCS1002 comes in a small 8-pin SOIC package and is ideal for space-shrunk applications such as battery chargers.

Features

- Low Input Offset Voltage: 0.5 mV, Typ
- Input Common-Mode Range includes Ground
- Low Quiescent Current: 300 μ A per Op Amp at $V_{CC} = 5$ V
- Large Output Voltage Swing
- Wide Power Supply Range: 3 V to 32 V
- High ESD Protection: 2 kV
- These are Pb-Free Devices

Typical Applications

- Battery Chargers
- Switch Mode Power Supplies

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 8 of this data sheet.

NCS1002

MAXIMUM RATINGS

Parameter	Symbol	Rating	Unit
Supply Voltage (V_{CC} to GND)	V_{CC}	36	V
Differential Input Voltage	V_{id}	36	V
Input Voltage	V_i	-0.3 to +36	V
ESD Protection Voltage at Pin Human Body Model	V_{ESD}	2000	V
Maximum Junction Temperature	T_J	150	°C
Specification Temperature Range (T_{min} to T_{max})	T_A	-40 to +105	°C
Operating Free-Air Temperature Range	T_{oper}	-55 to +125	°C
Storage Temperature Range	T_{stg}	-55 to +150	°C

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

- The input common-mode voltage of either input signal should not be allowed to go negative by more than 0.3 V. The upper end of the common-mode range is $V_{CC} - 1.5\text{ V}$. Both inputs can go to $V_{CC} + 0.3\text{ V}$ without damage.
- The Dynamic Impedance is defined as $|Z_{KA}| = \Delta V_{KA} / \Delta I_K$.
- Guaranteed by design and/or characterization.
