

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

# NCS2302

## Headset Detection Interface with Send/End Detect

The NCS2302 is a compact and cost effective headset detection interface IC. It integrates several circuit blocks to detect the presence of a stereo headset with a microphone and whether the send/end button has been pressed. The NMOS transistor on the MIC pin mutes the signal when the headset is not present. The built in resistor divider provides the reference voltage for detecting the left audio channel. When L\_DET and GND\_DET are pulled low, the logic low output of the OR gate indicates the headset has been connected properly and the MIC pull-down is disabled. A comparator is integrated for detecting the send/end button press. The NCS2302 comes in a space-saving UQFN10 package (1.4 x 1.8 mm).

### Features

- Wide Supply Voltage Ranges:  
For Headset Detection Circuit:  $V_{DD} = 1.6\text{ V to }2.5\text{ V}$   
For S/E Comparator Circuit:  $V_{DD2} = 1.6\text{ V to }2.8\text{ V}$
- Low Quiescent Supply Current: 17  $\mu\text{A}$  typical
- Low Impedance MIC Pull-Down Reduces Pop & Click Noise:  
 $R_{DS(ON)} = 0.45\ \Omega$  Typical
- Space Saving UQFN10 Package
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

### Typical Applications

- Cell Phones, Smartphones
- Tablets
- Notebooks

Table 1. OUTPUT LOGIC

Inputs		Outputs		Headset
L_detect	GND_detect	DET	MIC	
0	0	0	1 (external pull-up)	Detected
0	1	1	0	Not Detected
1	0	1	0	
1	1	1	0	

Table 2. PIN DESCRIPTION

Pin	Name	Type	Description
1	GND	Power	Connects to system ground.
2	MIC	Output	The open drain MIC pin is connected to the audio jack MIC pin. The MIC pin will pull low when the headset is not connected. When the headset is detected, the internal pull-down is disabled and the external pull-up biases the microphone.
3	VDD	Power	Supply voltage pin for headset detection circuit. A bypass capacitor of 0.1 $\mu$ F is recommended as close as possible to this pin.
4	L_DET	Input	Connect to audio jack L_DET. This pin is pulled low when the headset is present.
5	GND_DET	Input	Connect to audio jack GND_DET. This pin is pulled low when the headset is present.
6	DET	Output	Indicates whether headset has been detected. Headset is detected when DET is low.
7	S/E	Output	Indicates whether send/end button press has been detected. Button press is detected when S/E is low.
8	S/E_DET	Input	Non-inverting input of the comparator detects whether the send/end button has been pressed.
9	S/E_REF	Input	Inverting input of the comparator sets a voltage reference with an external resistor divider
10	VDD2	Power	Supply voltage pin for S/E detection comparator. A bypass capacitor of 0.1 $\mu$ F is recommended as close as possible to this pin.

Table 3. ABSOLUTE MAXIMUM RATINGS (Note 1)

Rating	Symbol	Value	Unit
Supply Voltage Range of Headset Detection Circuit	V <sub>DD</sub>	0 to 2.75	V
Supply Voltage Range of S/E Detection Comparator	V <sub>DD2</sub>	0 to 2.95	V
Input Pin Voltage Range (L_DET, GND_DET)	V <sub>IN</sub>	-0.1 to V <sub>DD</sub> + 0.1	V
Input Pin Voltage Range (S/E_REF, S/E_DET) (Note 4)	V <sub>IN</sub>	-0.1 to min(V <sub>DD2</sub> + 0.6, 3.3)	V
MIC Output Pin Voltage Range	V <sub>MIC</sub>	0 to 6.0	V
Max Current on MIC Pin	I <sub>MIC</sub>	2	mA
Maximum Junction Temperature	T <sub>J(max)</sub>	+125	°C
Storage Temperature Range	T <sub>stg</sub>	-65 to +150	°C
Latch-up Current (Note 2)	I <sub>LU</sub>	800	mA
Moisture Sensitivity Level (Note 3)	MSL	Level 1	

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

1. Refer to ELECTRICAL CHARACTERISTICS and APPLICATION INFORMATION for Safe Operating Area.

2. Latch-up Current tested per JEDEC standard: JESD78

3. Moisture Sensitivity Level tested per IPC/JEDEC standard: J-STD-020A

4. The maximum voltage on the S/E\_REF and S/E\_DET pins must be the lesser of V<sub>DD2</sub> + 0.6 and 3.3 V.

**Table 4. RECOMMENDED OPERATING RANGES**

Rating	Conditions	Symbol	Min	Typ	Max	Unit
Power Supply Voltage	Headset Detection Circuit	$V_{DD}$	1.6	1.8	2.5	V
	S/E Detection Comparator	$V_{DD2}$	1.6		2.8	V
Input Voltage	L_DET, GND_DET	$V_{IN}$	0		$V_{DD}$	V
	S/E_DET, S/E_REF		0		$V_{DD2}$	V
Input Transition Rise or Fall Rate	GND_DET pin	$\Delta t / \Delta V$	0		10	ns/V
MIC Bias Voltage		$V_{MIC}$	0		2.95	V
Ambient Temperature		$T_A$	-40		85	°C
Junction Temperature		$T_J$	-40		125	°C

Functional operation above the stresses listed in the Recommended Operating Ranges is not implied. Extended exposure to stresses beyond the Recommended Operating Ranges limits may affect device reliability.

**Table 5. ELECTRICAL CHARACTERISTICS** Typical values are referenced to  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 1.8\text{ V}$ ,  $V_{DD2} = 2.1\text{ V}$ , unless otherwise noted. Min/max values apply from  $T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$ , unless otherwise noted. (Notes 5, 6)

Parameter	Test Conditions	Symbol	Min	Typ	Max	Units
-----------	-----------------	--------	-----	-----	-----	-------

**SUPPLY CHARACTERISTICS**

Quiescent Supply Current	Headset Detection Circuit, $V_{GND\_DET} = 1.8\text{ V}$ , $V_{L\_DET} = 1.8\text{ V}$	$I_{DD}$		7	8.5	$\mu\text{A}$
	S/E Detection Comparator, $V_{SE\_REF} = 0\text{ V}$ , $V_{SE\_DET} = 2.1\text{ V}$	$I_{DD2}$		10	12.5	$\mu\text{A}$

**INPUT CHARACTERISTICS OF L\_DET**

Voltage Input Low		$V_{IL}$			1.33	V
Voltage Input High		$V_{IH}$	1.5			V
Propagation Delay to DET	$C_{out} = 15\text{ pF}$ , $GND\_DET = 0\text{ V}$ , $L\_DET = 1.31\text{ V}$ to $1.52\text{ V}$	$t_{pLH}$ , $t_{pHL}$		45		ns
Low to High Propagation Delay to MIC	$C_{out} = 15\text{ pF}$ , $GND\_DET = 0\text{ V}$ , $L\_DET = 1.31\text{ V}$ to $1.52\text{ V}$ , $R_{PU} = 2.2\text{ k}\Omega$ , MIC bias = $2.3\text{ V}$	$t_{pLH}$		230		ns
High to Low Propagation Delay to MIC	$C_{out} = 15\text{ pF}$ , $GND\_DET = 0\text{ V}$ , $L\_DET = 1.31\text{ V}$ to $1.52\text{ V}$ , $R_{PU} = 2.2\text{ k}\Omega$ , MIC bias = $2.3\text{ V}$	$t_{pHL}$		30		ns
Low Voltage Input Bias Current	$V_{L\_DET} = 0\text{ V}$	$I_{IL}$		1.8		$\mu\text{A}$
High Voltage Input Leakage	$V_{L\_DET} = 1.8\text{ V}$	$I_{IH}$		2.4		nA
Input Capacitance	$f = 1\text{ MHz}$	$C_{IN}$		3		pF

**INPUT CHARACTERISTICS OF GND\_DET**

Voltage Input Low		$V_{IL}$			0.63	V
Voltage Input High		$V_{IH}$	1.17			V
Low to High Propagation Delay to DET	$C_{out} = 15\text{ pF}$ , $R_L = 1\text{ M}\Omega$ , $L\_detect = 0\text{ V}$ , $GND\_detect = 1.8$ to $0\text{ V}$	$t_{pLH}$		30		ns
High to Low Propagation Delay to DET	$C_{out} = 15\text{ pF}$ , $R_L = 1\text{ M}\Omega$ , $L\_detect = 0\text{ V}$ , $GND\_detect = 0$ to $1.8\text{ V}$	$t_{pHL}$		16		ns
Low Voltage Input Bias Current	$V_{GND\_detect} = 0\text{ V}$	$I_{IL}$		1.8		$\mu\text{A}$
High Voltage Input Leakage	$V_{GND\_detect} = 1.8\text{ V}$	$I_{IH}$		2.7		nA
Input Capacitance	$f = 1\text{ MHz}$	$C_{IN}$		3		pF

5. Refer to ABSOLUTE MAXIMUM RATINGS and APPLICATION INFORMATION for Safe Operating Area.

6. Performance guaranteed over the indicated operating temperature range by design and/or characterization.

**Table 5. ELECTRICAL CHARACTERISTICS** Typical values are referenced to  $T_A = 25^\circ\text{C}$ ,  $V_{DD} = 1.8\text{ V}$ ,  $V_{DD2} = 2.1\text{ V}$ , unless otherwise noted. Min/max values apply from  $T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$ , unless otherwise noted. (Notes 5, 6)

## APPLICATIONS INFORMATION

**Supply Voltages**

The NCS2302 works with a wide range of supply voltages. The main headset detection circuitry power supply can range from  $V_{DD} = 1.6$  V to 2.5 V. The send/end button press detection circuit can be powered from  $V_{DD2} = 1.6$  to 2.8 V.  $V_{DD}$  should be powered up before  $V_{DD2}$ . The send/end detection comparator will not be functional unless  $V_{DD}$  and  $V_{DD2}$  are both applied.  $V_{DD2}$  can be connected to  $V_{DD}$  or to a separate supply voltage, such as the MIC bias voltage. Decoupling capacitors of 0.1  $\mu$ F should be placed as close as possible to each power supply pin. Since the NCS2302 has built in latch-up immunity up to 800 mA, series resistors are not recommended on VDD or VDD2.

**Audio Jack Detection**

The NCS2302 is designed to simplify the detection of a stereo audio connector with a microphone contact. When the headset is not connected, the internal pull-up resistors on L\_DET and GND\_DET pull those pins high. When the headset is connected to the switched audio jack, the headset ground and left audio channel trigger L\_DET and GND\_DET to logic low.

The NCS2302 can work with either the CTIA or OMTP standard. In order to support both standards simultaneously, a cross point switch and additional circuitry is necessary to detect and swap the ground and microphone pins.

**Send/End Button Press Detection**

A second integrated comparator allows the send/end signal to be compared with a reference voltage to detect whether the send/end button has been pressed.

**MIC Pin Biasing**

The typical application schematic in Figure 1 shows the recommended 2.2 k $\Omega$  pull-up resistor to the MIC bias voltage. The MIC bias voltage can exceed  $V_{DD}$  and can go as high as 2.95 V. When the headset is not detected, the internal NMOS transistor is enabled to mute the MIC signal. In the typical application scenario with a 2.2 k $\Omega$  pull-up to a 2.1 V MIC bias voltage, the MIC pin is pulled to 1 mV when the headset is not present. The internal NMOS transistor is optimized to sink up to 2 mA of current, allowing some flexibility in the selection of the pull-up resistor and MIC bias voltage.
