

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

NCS2566

Six-Channel Video Driver with Triple SD & Triple Selectable SD/HD Filters

The NCS2566 integrates reconstruction filters and video amplifiers. It's a combination of two 3-channel drivers – the first one capable to deal with Standard Definition (SD) video signals and a second one including selectable filters for either Standard or High Definition (HD) video applications. The filters implemented are 6th order Butterworth Low Pass filters particularly effective for rejecting unwanted high frequency components and assuring good linearity of the phase change over frequency with well optimized group delays.

All channels can accept DC- or AC-coupled signals; when AC-coupled the internal clamps are employed. The outputs can drive both AC- and DC-coupled 150 Ω loads.

It is designed to be compatible with most Digital-to-Analog Converters (DAC) embedded in video processors. To further reduce power consumption, two enable pins are provided, one for each triple driver. One pin allows selection of the filter frequency of the SD/HD triple driver.

Features

- 3-Channel with Selectable 6th-Order 8/34 MHz Butterworth Filters
- 3-Channel with Fixed 6th-Order 8 MHz Butterworth Filters
- Transparent Input Clamp for Each Channel
- Integrated Level Shifter
- AC- or DC-Coupled Inputs and Outputs
- Low Quiescent Current
- Shutdown Current 42 μ A Typical (Disabled)
- 5 V Power Supply
- Each Channel Capable to Drive 2 by 150 Ω Load
- Internal Gain: 6 dB \pm 0.2
- Wide Input Common Mode Range
- 8 kV ESD Protection (IEC61000-4-2 Compatible)
- Operating Temperature Range: -40°C to +85°C
- Available in a TSSOP-20 Package
- These are Pb-Free Devices

Typical Applications

- Set-Top Box
- DVD players and related
- HDTV

NCS2566

PIN FUNCTION AND DESCRIPTION

Pin	Name	Type	Description
1	SD IN1	Input	SD Video Input 1 – SD Channel 1
2	SD IN2	Input	SD Video Input 2 – SD Channel 2
3	SD IN3	Input	SD Video Input 3 – SD Channel 3
4	SD $\overline{\text{EN}}$	Input	SD-Channel Enable/Disable Function: Low = Enable, High = Disable. When left open the default state is Enable.
5	VCC	Power	Device Power Supply Voltage: +5 V \pm 5%
6	SD/HD	Input	Pin of selection enabling the Standard Definition or High Definition Filters (8 MHz / 34 MHz) for channels SD/HD (pins 7–14, 8–13 & 9–12) – when Low SD filters are selected, when High HD filters are selected.
7	SD/HD IN1	Input	Selectable SD or HD Video Input 1 – SD/HD Channel 1
8	SD/HD IN2	Input	Selectable SD or HD Video Input 2 – SD/HD Channel 2
9	SD/HD IN3	Input	Selectable SD or HD Video Input 3 – SD/HD Channel 3
10	NC	Open	Not Connected
11	NC	Open	Not Connected
12	SD/HD OUT3	Output	SD/HD Video Output 3 – SD/HD Channel 3
13	SD/HD OUT2	Output	SD/HD Video Output 2 – SD/HD Channel 2
14	SD/HD OUT1	Output	SD/HD Video Output 1 – SD/HD Channel 1
15	SD/HD $\overline{\text{EN}}$	Input	SD/HD Channel Enable /Disable Function: Low = Enable, High = Disable. When left open the default state is Enable.
16	GND	GND	Connected to Ground
17	GND	GND	Connected to Ground
18	SD OUT3	Output	SD Video Output 3 – SD Channel 3
19	SD OUT2	Output	SD Video Output 2 – SD Channel 2
20	SD OUT1	Output	SD Video Output 1 – SD Channel 1

MAXIMUM RATINGS

Parameter	Symbol	Rating	Unit
Power Supply Voltages	V_{CC}	$-0.3 \leq V_{CC} \leq 5.5$	Vdc
Input Voltage Range	V_I	$-0.3 \leq V_I \leq V_{CC}$	Vdc
Input Differential Voltage Range	V_{ID}	$-0.3 \leq V_I \leq V_{CC}$	Vdc
Output Current Per Channel	I_O	50	mA
Maximum Junction Temperature (Note 1)	T_J	150	°C
Operating Ambient Temperature	T_A	-40 to +85	°C
Storage Temperature Range	T_{stg}	-60 to +150	°C
Power Dissipation	P_D	(See Graph)	mW
Thermal Resistance, Junction-to-Air	$R_{\theta JA}$	125	°C/W
ESD Protection Voltage (IEC61000-4-2)	V_{esd}	>8000	V
ESD HBM – Human Body Model	HBM	4000	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. Power dissipation must be considered to ensure maximum junction temperature (T_J) is not exceeded.

MAXIMUM POWER DISSIPATION

The maximum power that can be safely dissipated is limited by the associated rise in junction temperature. For the plastic packages, the maximum safe junction temperature is 150°C. If the maximum is exceeded momentarily, proper circuit operation will be restored as soon as the die temperature is reduced. Leaving the device in the “overheated” condition for an extended period can result in device burnout. To ensure proper operation, it is important to observe the derating curves.

Figure 2. Power Dissipation vs Temperature

APPLICATIONS INFORMATION

The NCS2566 6-channel video filter driver has been optimized for Standard and High Definition video applications covering the requirements of the standards Composite video (CVBS), S-Video, Component Video (480i/525i, 576i/625i, 720p/1080i) and related (RGB). The first 3-channels (SD1, SD2, SD3) are dedicated for Standard Definition, CVBS and S-Video applications for which the frequency bandwidth required does not exceed 8 MHz. The 3 other channels (SD/HD1, SD/HD2, SD/HD3) have selectable filters (8 MHz and 34 MHz) for covering either standard-definition-like video applications or High Definition video applications. These frequencies are selectable using the pin $\overline{SD/HD}$. If the application requires, the video driver outputs may also be disabled using the SD \overline{EN} or SD/HD \overline{EN} required by the application the pins SD \overline{EN} or SD/HD \overline{EN} .

In the regular mode of operation each channel provides an internal voltage-to-voltage gain of 2 from input to output. This effectively reduces the number of external components required as compared to discrete approaches implemented with stand-alone op amps. An internal level shifter is employed shifting up the output voltage by adding an offset of 200 mV. This prevents sync pulse clipping and allows DC-coupled output to the 150 Ω video load. In addition the NCS2566 integrates a 6th-order Butterworth filter for each channel. This allows rejection of aliases or unwanted over-sampling effects produced by the video DAC. Similar for DVD recorders which uses an ADC, this anti-aliasing filter (reconstruction filter) will avoid picture quality issues and will aide filtration of parasitic signals caused by EMI interference.

A built-in diode-like clamp is used in the chip for each channel to support the AC-coupled mode of operation. The clamp is active when the input signal goes below 0 V.

The built-in clamp and level shifter allow the device to operate in different configuration modes depending on the

DAC output signal level and the input common mode voltage of the video driver. When the configuration is DC-Coupled at the Inputs and Outputs the 0.1 μ F and 220 μ F coupling capacitors are no longer used and the clamps are in that case inactive; this configuration provides a low cost solution which can be implemented with few external components.

The input is AC-coupled when either the input-signal amplitude goes over the range 0 V to 1.4 V or if the video source requires such a coupling. In some circumstances it may be necessary to auto-bias signals with the addition of a pull-up and pull-down resistors or only pull-up resistor (Typical 7.5 M Ω combined with the internal 800 k Ω pulldown) making the clamp inactive.

The output AC-coupling configuration is advantageous for eliminating DC ground loop, but may have the drawback of increasing sensitivity to video line or field tilt issues if the output coupling capacitor is too small. DC ground loop with the drawback of making the device more sensitive to video line or field tilt issues in the case of a too low output coupling capacitor. In some cases it may be necessary to increase the nominal 220 μ F capacitor value.

All the device pins are protected against electrostatic discharge at a level of 4 kV HBM and 8 kV according to IEC61000-4-2. This feature has been considered with a particular attention with ESD structure able to sustain the typical values requested by the systems like Set Top Boxes or Blue-Ray players. This parameter is particularly important for video driver which usually constitutes the last stage in the video chain before the video output connector. The IEC61000-4-2 standard has been used to test our devices in the real application environment. Test methodology can be provided on request.
