

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Eval Board User's Manual

Introduction

This document gives a detailed description of the NCS29001 Evaluation Board (SOIC-14 package) with the bill of materials, and board schematic. The appropriate lab test setups are also provided.

The NCS29001 Evaluation Board has been designed for a quick evaluation of the NCS29001 LCD backlight driver. Among its main characteristics, this evaluation board has been constructed to boost an input voltage of 24 V to drive an output LED string of 76 V at 200 mA.

This document must be used with the NCS29001 datasheet available on www.onsemi.com. The datasheet contains full technical details about the NCS29001 specifications and operation. The board is implemented in two metal layers with FR-4 dielectric. The top and bottom layers have thicknesses of 35 μm . The total PCB thickness is 1.62 mm with dimensions of 95.4 mm by 63.5 mm.

This evaluation board can be used to evaluate the device performance and it allows the user to place the NCS29001 device in a real application environment. While the intention is to evaluate the device according to datasheet specifications, it is important to take into account the additional circuitry inherent to the setup which can affect performance.

Figure 1. Evaluation Board (not to scale)

EQUIPMENT

The following table details the equipment used in the context of this application note manual.

Table 1. EQUIPMENT

Description	Main Features	Example of Equipment	Qty.
Regulated Power Supply	25 V / 5 A capability or greater	Chroma 62012P-600-8	1
Multimeter	-	Agilent 34401A	1
Oscilloscope	-	Tektronix MSO2024	1
Current probe	-	Tektronix TCP202	1
Waveform generator	-	Tektronix AFG3102	1

Get Started...

- Attach output LED string (76 V total VF)
- Set $V_{IN} = 12\text{ V}$ and $V_{inductor} = 24\text{ V}$
- Bring device out of standby by applying high to low transition on STBY pin
- Turn on device by applying PWM signal to PWMIn pin (between 100 Hz and 300 Hz with 10% to 100% duty cycle)
- Turning on the device from standby will trigger soft-start power up with smooth LED current ramp up
- LED brightness can be varied by adjusting duty cycle on the PWM signal
- Maximum LED current is set to 200 mA for this application
