

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## NCV885300 Evaluation Board User's Manual

ON Semiconductor®

<http://onsemi.com>

### EVAL BOARD USER'S MANUAL

#### Description

The NCV885300 evaluation board provides a convenient way to evaluate and integrate a complete high-efficiency non-synchronous buck converter design. No additional components are required, other than dc supplies for the input voltage and enable pin. The board can also be connected to an external clock source to synchronize the switching frequency. The power good signal can be pulled up externally with the PG+ pin. The board is configured for a 5.0 V output with a 340 kHz switching frequency and a 3 A current limit, intended for applications requiring 2 A of current.

Modifying the NCV885300 evaluation board for different output voltage, switching frequency, or current limit is straightforward, requiring minimal component changes.

#### Key Features

- 5.0 V Output Voltage
- 340 kHz Switching Frequency
- 2.0 A Current Limit
- Power Good Signal
- Wide Input Voltage of 6.0 V to 36 V
- Regulated through Load Dump Conditions
- External Clock Synchronization up to 500 kHz
- Automotive Grade

Figure 1. NCV885300EVB Board Picture

# NCV885300EVB

**Table 1. EVALUATION BOARD TERMINALS**

Pin Name	Function
VIN	Positive dc input voltage
VOUT	Regulated dc output voltage
GND	Common dc return
EN/SYNC	Enable input and external clock synchronization input
PG	Digital power good output
PG+	Power good pull-up. Use this pin only when pulling-up PG to an external voltage source.

**Table 2. ABSOLUTE MAXIMUM RATINGS**

(Voltages are with respect to GND)

Rating	Value	Units
Dc supply voltage (VIN)	-0.3 to 36	V
Dc supply voltage (EN/SYNC, PG, PG+)	-0.3 to 6.0	V

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

**Table 3. ELECTRICAL CHARACTERISTICS**

( $T_A = 25^\circ\text{C}$ ,  $6.0\text{ V} \leq V_{IN} \leq 36\text{ V}$ ,  $V_{EN/SYNC} = 5.0\text{ V}$ ,  $0 \leq I_{OUT} \leq 2.0\text{ A}$ , unless otherwise specified)

Characteristics	Conditions	Typical Value	Units
<b>Regulation</b>			
Output Voltage		5.0	V
Voltage Accuracy		2	%
Line Regulation	$I_{OUT} = 1.0\text{ A}$	0.04	%
Load Regulation	$V_{IN} = 13.2\text{ V}$	0.12	%
<b>Switching</b>			
Switching Frequency		340	kHz
Soft-start Time		2.0	ms
SYNC Frequency Range		270 to 500	kHz
<b>Current Limit</b>			
Cycle-by-Cycle Current Limit		3.33	A
Over Current Protection Threshold		5.0	A
<b>Protections</b>			
Input Undervoltage Lockout (UVLO)	$V_{IN}$ decreasing	3.1	V
Thermal Shutdown	$T_J$ rising	170	$^\circ\text{C}$

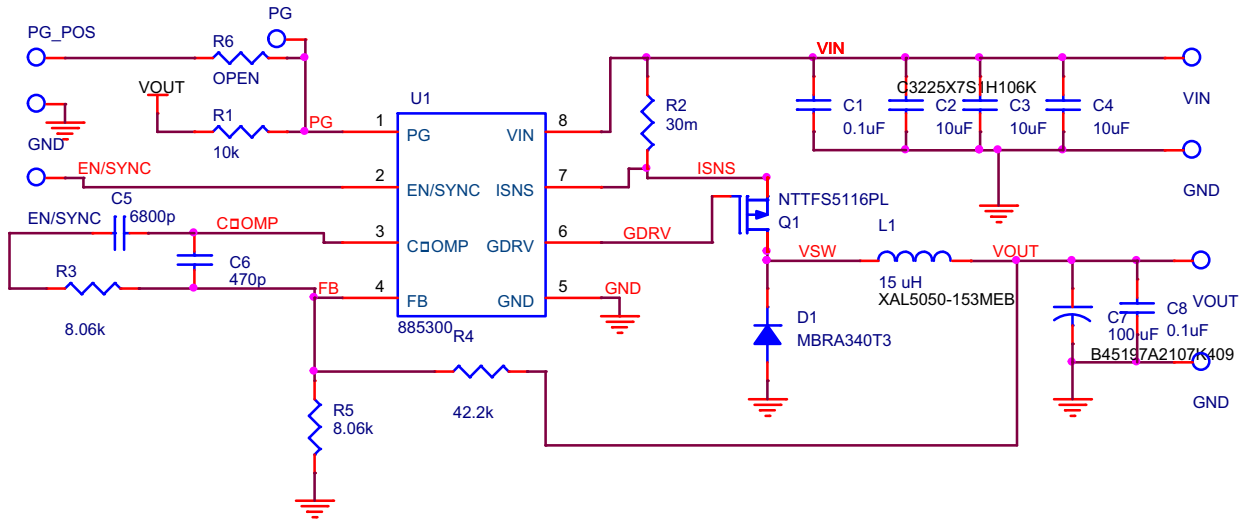

Figure 2. NCV885300EVB Board Schematic

## Operational Guidelines

1. Connect a dc input voltage, within the 6.0 V to 36 V range, between VIN and GND
2. Connect a load between VOUT and GND
3. Connect a dc enable voltage, within the 2.0 V to 5.5 V range, between EN/SYNC and GND
4. Optionally, for external clock synchronization, connect a pulse source between EN/SYNC and GND. The high state level should be within the 2.0 V to 5.5 V range, and the low state level within the 0.0 V to 0.8 V range, with a frequency within the 270 kHz to 500 kHz range.

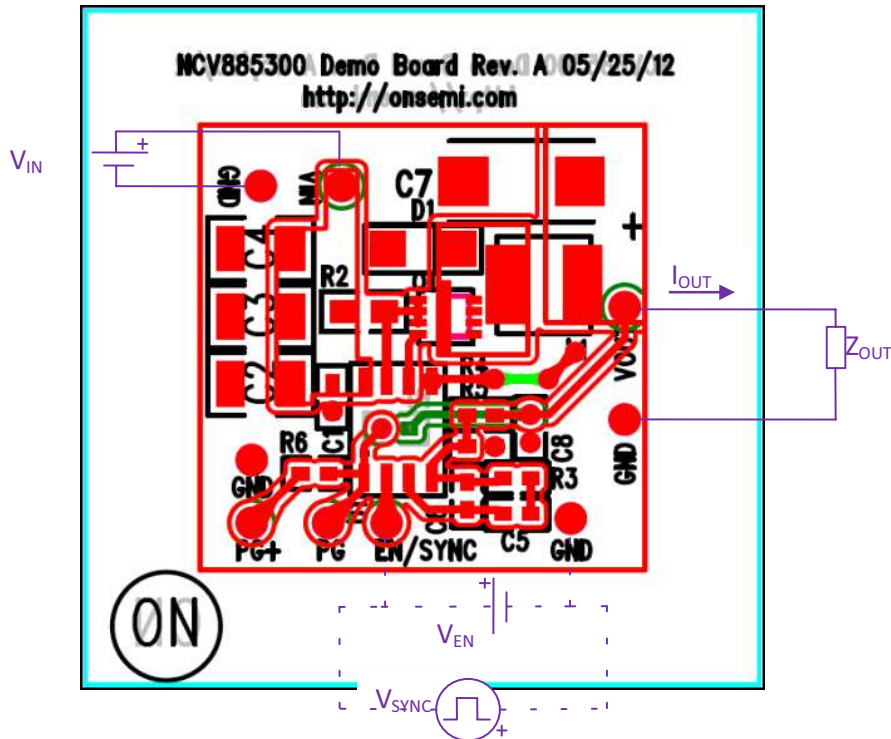

Figure 3. NCV885300EVB Board Connections

# NCV885300EVB

## Power Good Operation

- The Power Good pin (PG) allows you to digitally monitor the output voltage. When VOUT is above 90% of the expected value, the PG signal is in a high state. By default, PG is pulled high to VOUT through a 10 kΩ resistor.
- Optional: To pull the PG pin high using a signal other than VOUT, please make the following board modifications:
  1. Remove R1 from the board.
  2. Populate R6 with a 10 kΩ resistor.
  3. Connect the a voltage source between PG+ and GND (please see the Absolute Maximum Ratings table for more information).
  4. PG is now ready to digitally monitor VOUT using an external pull-up.
