

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Contact us

Tel: +86-755-8981 8866 Fax: +86-755-8427 6832

Email & Skype: info@chipsmall.com Web: www.chipsmall.com

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

## FEATURES

- Lowest auto-zero amplifier noise
- Low offset voltage: 1  $\mu\text{V}$  typical
- Input offset drift: 0.002  $\mu\text{V}/^\circ\text{C}$  typical
- Rail-to-rail input and output swing
- 5 V single-supply operation
- High gain, CMRR, and PSRR: 130 dB
- Very low input bias current: 100 pA maximum
- Low supply current: 1.0 mA
- Overload recovery time: 50  $\mu\text{s}$
- No external components required

## ENHANCED PRODUCT FEATURES

- Supports defense and aerospace applications (AQEC standard)
- Extended temperature range:  $-55^\circ\text{C}$  to  $+125^\circ\text{C}$
- Controlled manufacturing baseline
- One assembly/test site
- One fabrication site
- Enhanced product change notification
- Qualification data available on request

## APPLICATIONS

- Pressure and position sensors
- Strain gage amplifiers
- Medical instrumentation
- Thermocouple amplifiers
- Precision current sensing
- Photodiode amplifiers

## PIN CONFIGURATION

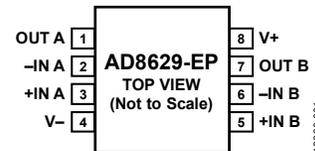

Figure 1. 8-Lead SOIC\_N (R-8)

## GENERAL DESCRIPTION

The **AD8629-EP** amplifier has ultralow offset, drift, and bias current. The device is a wide bandwidth auto-zero amplifier featuring rail-to-rail input and output swing and low noise. Operation is fully specified from 2.7 V to 5 V single supply ( $\pm 1.35$  V to  $\pm 2.5$  V dual supply).

The **AD8629-EP** provides benefits previously found only in expensive auto-zeroing or chopper-stabilized amplifiers. Using Analog Devices, Inc., topology, this zero-drift amplifier combines low cost with high accuracy and low noise. No external capacitor is required. In addition, the **AD8629-EP** greatly reduces the digital switching noise found in most chopper-stabilized amplifiers.

With an offset voltage of only 1  $\mu\text{V}$ , drift of less than 0.05  $\mu\text{V}/^\circ\text{C}$ , and noise of only 0.5  $\mu\text{V}$  p-p (0 Hz to 10 Hz), the **AD8629-EP** is suited for applications where error sources cannot be tolerated. Position and pressure sensors, medical equipment, and strain gage amplifiers benefit greatly from nearly zero drift over the operating temperature range. Many systems can take advantage of the rail-to-rail input and output swings provided by the **AD8629-EP** to reduce input biasing complexity and maximize SNR.

The **AD8629-EP** is specified for the extended industrial temperature range ( $-55^\circ\text{C}$  to  $+125^\circ\text{C}$ ). The **AD8629-EP** is available in a standard 8-lead narrow SOIC plastic package.

## ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
Supply Voltage	6 V
Input Voltage	GND – 0.3 V to $V_S + 0.3$ V
Differential Input Voltage <sup>1</sup>	±5.0 V
Output Short-Circuit Duration to GND	Indefinite
Storage Temperature Range	–65°C to +150°C
Operating Temperature Range	–55°C to +125°C
Junction Temperature Range	–65°C to +150°C
Lead Temperature (Soldering, 60 sec)	300°C
ESD	
HBM 8-Lead SOIC_N	±4000 V
FICDM 8-Lead SOIC_N	±1250 V

<sup>1</sup> The differential input voltage is limited to ±5 V or the supply voltage, whichever is less.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## THERMAL CHARACTERISTICS

$\theta_{JA}$  is specified for worst-case conditions, that is,  $\theta_{JA}$  is specified for the device soldered in a circuit board for surface-mount packages. This was measured using a standard two-layer board.

Table 4.

Package Type	$\theta_{JA}$	$\theta_{JC}$	Unit
8-Lead SOIC_N (R-8)	158	43	°C/W

## ESD CAUTION

**ESD (electrostatic discharge) sensitive device.** Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.
