

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## VIDEO COLOR SUPERIMPOSER

### ■ GENERAL DESCRIPTION

**NJM2247A / B** is the multi – functional color superimposer IC for video base band (Y, R – Y, B - Y). Various type of Y, R – Y, B – Y output signals can be made by the digital controlled signals. The signal control at the base band, made it possible on operation with less external parts, as well as for non adjustment on operation.

### ■ PACKAGE OUTLINE

**NJM2247AM / BM**

### ■ FEATURES

- 5V Single Power Supply
- 8 Types Color Superimposer
- Burst Flag Insert Function
- Y Inversion, C Inversion Function
- NTSC / PAL Matching
- Non Operational Adjustment
- Less External Parts
- Package Outline DMP20
- Bipolar Technology

### ■ RECOMMENDED INPUT CONDITIONS

- Y Signal  $0.7V_{P-P}$
- R – Y Signal  $1.0V_{P-P}$
- B – Y Signal  $0.7V_{P-P}$
- Control Voltage
- Low Level 0 to 0.25V
- High Level 4.75 to 5V

### ■ PIN CONFIGURATION

**NJM2247AM / BM**

#### PIN FUNCTION

- |                  |                                 |
|------------------|---------------------------------|
| 1. $Y_{out}$     | 11. GND                         |
| 2. $V^+$         | 12. HBF Pulse                   |
| 3. R             | 13. BF                          |
| 4. G             | 14. NTSC/PAL Switching          |
| 5. B             | 15. Clamp Pulse                 |
| 6. $B - Y_{in}$  | 16. Character Pulse             |
| 7. $B - Y_{out}$ | 17. $Y_{in}$                    |
| 8. $R - Y_{in}$  | 18. Inversion Set up Correction |
| 9. $R - Y_{out}$ | 19. Y Inversion                 |
| 10. C Inversion  | 20. BLK Pulse                   |

# NJM2247A / B

## ■ INFORMATIONS

Following four points are the outstanding function of the **NJM2247A / B**. These functions are to go through three input (Y, R – Y, B - Y) signals control by ten control pins.

1. Color Superimpose  
DC level of each equivalent colors shall be supplied to Y, R – Y and B – Y inputs.
2. Burst Flag Insertion  
150 mV burst flag shall be added to R – Y, B – Y input signals.  
Burst flag is selected by the NTSC / PAL switch.
3. C Inversion  
The color phase of the picture shall be inverted for one hundred and eighty degrees. The color phase of the imposed character shall not be altered. This function shall be proceeded when inverting the burst flag, and at the same time, the imposed character level shall be inverted too.
4. Y Inversion  
It is the brightness level inversion. The imposed character color shall not be changed. This function shall be proceeded the switching Y signal output to the inverter side.

	R-Y	1.0V <sub>P-P</sub>	⑨
	B-Y	0.7V <sub>P-P</sub>	⑦

# NJM2247A / B

## APPLICATION NOTES

I / O Explanation

- Control Pin Low = 0V, HIGH = 5V

- Adjusting Pin (Normally open → non adjustment)
- BF level ⑬ Burst flag insert level adjusting pin.
- Inversion set up correction ⑱ Y inversion signal level adjusting pin.

### 1. Input Signal

Superimposed color level shall be determined by the following standard signal level.

Y	0.7V <sub>P-P</sub>
R - Y	1.0V <sub>P-P</sub>
B - Y	0.7V <sub>P-P</sub>

The character output standard level on the specification shall be determined through calculation out of 75 % of superimposed color level.

(In order to avoid the clipping of the encoding signal, the character output level is determined to lower level)

- The character output level converting expression

The basic expression

$$E_R - E_Y = 0.70 E_R = 0.59 E_G - 0.11 E_B$$

$$E_B - E_Y = -0.30 E_R - 0.59 E_G + 0.89 E_B$$

$$E_Y = 0.30 E_R + 0.59 E_G + 0.11 E_B$$

From standard level and practical input level, each color signal level imposed in R - Y, B - Y and Y signals are as in the following.

$$V_{R-Y} = 0.75 \times 1 [V_{P-P}] \times E_{R-Y} / 1.4$$

$$= 0.375 E_R - 0.316 E_G - 0.059 E_B$$

$$V_{B-Y} = 0.75 \times 0.7 [V_{P-P}] \times E_{B-Y} / 1.78$$

$$= -0.088 E_R - 0.174 E_G + 0.263 E_B$$

$$V_Y = 0.158 E_R + 0.310 E_G + 0.058 E_B$$

(E<sub>R</sub>, E<sub>G</sub>, E<sub>B</sub>, LOW 0, HIGH 1)

### 2. Clamp Pulse

During the interval of blanking, input the pulse through clamp pulse pin ⑳ the blanking level (0 level) of input signal (Y, R - Y, B - Y) is to be fixed at the bias point within the IC.

Note) The pulse width of clamp pulse shall be set more than A version 6μs and B version 3μs. (see figure 2)

Fig. 2 Clamp Pulse Width

### 3. Character Color Adjustment

Superimposed color adjustment of the character can be determined in eight different colors, by choosing R, G, B, input levels.

(LOW 0V, HIGH 5V)

R	G	B	COLOR
5	5	5	White
5	5	0	Yellow
0	5	5	Cyan
0	5	0	Green
5	0	5	Magenta
5	0	0	Red
0	0	5	Blue
0	0	0	Black

Character Color Selecting Code

### 4. Character Insertion

Pulse informations from outside character generator shall be given input at the character pulse pin (16). During the period of pulse process, the selected color level shall be inserted into each Y, R – Y, B – Y.

### 5. Burst Flag Insertion

Inputting burst period pulse at the HBF pin (12), the burst flag (150mV) can be inserted in the B – Y, R – Y signals. At the same time, by putting NTSC / PAL switch (14) the burst flag can be altered to NTSC or PAL system.

	NTSC / PAL SWITCH (14)	
	LOW 0V (PAL)	HIGH 5V (NTSC)
R – Y Signal	+ 150mV	non insertion
B – Y Signal	- 150mV	- 150mV

Burst Flag Inserting

Fig. 3 Burst Flag Inserting Example

## 6. C Inversion

The color phase of the picture shall be inverted for one hundred and eighty degrees setting C inversion pin (10). It is applied that the reference signal (burst flag) shall be inverted into one hundred and eighty degrees at the time of de-coding.

Superimposed character color do not change at the picture inversion.

	C INVERSION PIN (10)	
	LOW 0V	HIGH 5V
Burst	Non Inversion	Inversion

C Inversion Form

## 7. Y Inversion

The brightness of the picture shall be inverted by setting Y inversion pin (19). It is that Y signal shall be inverted by the inverter, and then blanking period signal shall be adjusted to the black level with blanking pulse.

Figure 4. Y Inversion Output Example

	Y INVERSION PIN (19)	
	LOW 0V	HIGH 5V
Y output	Non inversion	Inversion

Y Inversion Form

## 8. Adjusting pin

### (1) BF Level Pin (13)

It is the burst flag minor adjusting pin. The burst level shall be adjusted at the open voltage, 0.3V level adjustment. Therefore, the most recommended on operation with the open condition, as it has been controlled at 135 to 165 mV (burst level) on specification.

### (2) Inversion Set Up Correction Pin (18)

It is the minor adjusting pin of Y inversion signal level. The inverting black level shall be adjusted at the open voltage, 1.8 V level adjustment. Therefore, the most recommended on operation with the open condition, as it has been controlled with 0.59 to 0.77 V (inverting black level) on specification.

## 9. Pulse Timing

The pulse input timing should be proceeded as in the following.

## ■ TYPICAL APPLICATION

# NJM2247A / B

## ■ APPLICATION

This IC requires  $1\text{M}\Omega$  resistance between INPUT and GND pin for clamp type input since the minute current causes an unstable pin voltage.

[CAUTION]
