Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

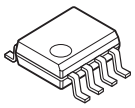
Precision Operational Amplifier

■ FEATURES

●Precision	V_{IO}=60μV max.
	V_{IO}=100μV max. (Ta=-40ºC to +85ºC)
●Low Offset Drift	$\Delta V_{IO}/\Delta T$=0.9μV/ºC max. (Ta=-40 to +85ºC)
●Specified for ±15V and ±5V operation	
●CMR	130dB min.
●Low Noise	V_{NI}=80nVrms typ. at f=1 to 100Hz
	en=8nV/√Hz typ. at f=100Hz
●Open Loop Gain	Av=130dB min.
●Guaranteed Temperature	Ta=-40ºC to +85ºC
●Unity Gain Stable	
●Operating Voltage	Vopr=±3V to ±18V
●Unity Gain Frequency	f_T=1.1MHz typ.
●Supply Current	Icc=2mA max.
●Package	SOP8 JEDEC 150mil

■ PACKAGE OUTLINE



NJM2729E

(SOP8)

■ GENERAL DESCRIPTION

The NJM2729 is a high performance operational amplifier features very low offset voltage and drift.

Features are low offset voltage and drift, hi common mode rejection, low noise and open loop gain. DC characteristics are 100% tested and specified from −40 to 85ºC.

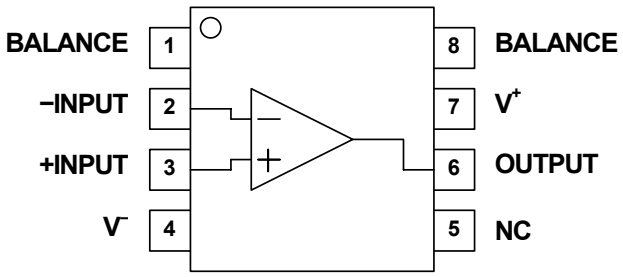
The NJM2729 is suitable for high gain circuit amplified small signal and sets required stable behavior over a wide temperature range.

■ APPRICATION

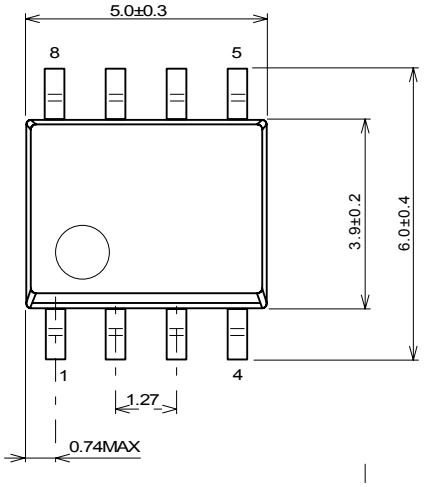
- ●Thermocouple sensor
- ●Bridge Amplifier
- ●Current Sensor
- ●Instrumentation Amplifier
- ●Reference Voltage Circuit

■ PIN CONFIGURATION

(Top View)



■ PACKAGE DESCRIPTION



SOP8 MEET JEDEC MS-012-AA

■ ABSOLUTE MAXIMUM RATING (Ta=25ºC Unless Otherwise Specified)

PARAMETER	SYMBOL	RATING	UNIT
Supply Voltage	V^+/V^-	±20	V
Common Mode Input Voltage (Note1)	V_{ICM}	±20	V
Differential Input Voltage	V_{ID}	±30	V
Power Dissipation (Note 2)	P_D	640	mW
Operating Temperature	Topr	-40 to +85	ºC
Storage Temperature	Tstg	-50 to +125	ºC

(Note1) For supply voltage less than ±20V, the maximum input voltage is equal to the supply voltage.
(Note2) Mounted on the EIA/JEDEC standard board (76.2×114.3×1.6mm, two layer, FR-4).

■ RECOMMENDED OPERATING VOLTAGE

PARAMETER	SYMBOL	TEST CONDITION	MIN.	TYP.	MAX.	UNIT
Supply Voltage	V^+/V^-		±3	-	±18	V

■ ELECTRONIC CHARACTERISTICS (V^+/V^-=±15V Ta=+25ºC, V_{ICM}=0V unless otherwise specified)

● EXPLANATION OF MEASUREMENT CONDITION

PARAMETER	Explanation
Input Offset Voltage Drift	Input Offset Voltage Drift = $\Delta V_{IO} / \Delta t$ Δt : Amount of Temperature change. ΔV_{IO} : Amount of Input Offset Voltage.
Common Mode Input Voltage range	A range of input voltage at which the operational amplifier can function.
Common Mode Rejection Ratio	$CMR = 20\log \lvert (\Delta V_{IN} / \Delta V_{IO}) \rvert$ ΔV_{IN} : Amount of Input Voltage. ΔV_{IO} : Amount of Input Offset Voltage.
Supply Voltage Rejection Ratio	$SVR = 20\log \lvert (\Delta V_S / \Delta V_{IO}) \rvert$ ΔV_S : Amount of supply Voltage. ΔV_{IO} : Amount of Input Offset Voltage.
Common Mode Input Impedance	$R_{INCM} = \Delta V_{IN} / \Delta I_B$ ΔV_{IN} : Amount of Input Voltage. ΔI_B : Amount of Input bias current.
Voltage Gain	$AV = 20\log \lvert (\Delta V_{IN} / \Delta V_O) \rvert$ ΔV_O : Amount of output Voltage. ΔV_{IN} : Amount of Input Voltage.

■ Application Information

●Power Supply Bypassing

The NJM2729 is a high precision operational amplifier featuring low offset voltage, high voltage gain, high CMR, high SVR and so on. To maximize such a high performance with stable operation, the NJM2729 should be operated by clean and low impedance supply voltage. So, the bypass capacitor should be connected to the NJM2729's both power supply terminals (V+ and V-) as shown in Fig.1. The bypass capacitors should be placed as close as possible to IC package

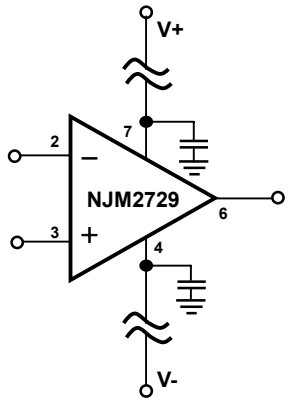

Fig.1 Power Supply Bypassing Circuit

●Thermoelectric Effect

The NJM2729 is a high precision operational amplifier featuring low offset voltage and low offset voltage thermal drift. To achieve such a high performance, take care about thermoelectric effect possibly occurs on each input terminal of the NJM2729. Generally, if there are thermal mismatches at the junction of different types of metals, the thermoelectric voltage (Seebeck effect) occurs at the junction. The thermoelectric voltages possibly occur at the junction of PCB metal patterns and NJM2729's each input terminal metal. If there is thermal mismatch in-between NJM2729's each input terminal metal, the thermoelectric voltages generated on each input terminal possibly have different voltage each. This voltage difference causes offset voltage and offset voltage thermal drift of the NJM2729. To minimize this voltage difference, the thermal mismatch in-between NJM2729's each input terminal and PCB metal should be minimized.

●Offset Voltage Adjustment

The NJM2729 has offset voltage trim terminals (pin1 and pin8) as shown in below Fig.2. By connecting external potentiometer in the range of 20Kohm, the offset voltage trim range is ±3mV. This offset voltage trim is effective only for offset voltage at room temperature, not for offset voltage thermal drift. If offset voltage adjustment is not in use, leave pin1 and pin8 open (un-connected).

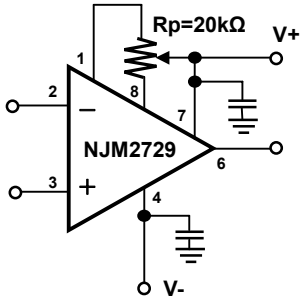

Fig.2 Offset Voltage Trim Circuit

●Differential Amplifier

Differential amplifier (see below Fig.3) is used in high accuracy circuit to improve common mode rejection ratio (CMR).
A matching between the ratio R1/R2 = R3/R4 and R1=R3 makes the high CMR.
For example, acceptable error range to obtain CMR of 130dB or more is about 0.1ppm.

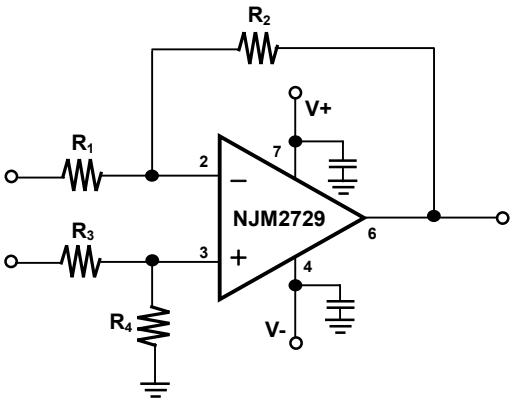

Fig.3 Differential Amplifier
