## : ©hipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation, and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## High Drive Fundamental Quartz Crystal Oscillator

- GENERAL DESCRIPTION

The NJU6368 series is a C-MOS fundamental quartz crystal oscillator that consists of an oscillation amplifier, 3-stage divider and 3-state output buffer.

The 3-stage divider generates only one frequency selected of $f_{0}, f_{0} / 2, f_{0} / 4$ and $f_{0} / 8$ by internal circuits is output.

The oscillation amplifier is realized very low stand-by current using NAND circuit.

The 3-state output buffer is C-MOS compatible and can drive $50 \mathrm{pF}(@ 5 \mathrm{~V}) \mathrm{C}-\mathrm{MOS}$ load.

Furthermore, the package is small-sized SOT-23-6-1.

- FEATURES
- Operating Voltage
2.7 to 5.5 V
- Maximum Oscillation Frequency

50 MHz

- Low Operating Current
- High Fan-out
$\mathrm{I}_{\mathrm{OH}} / \mathrm{l}_{\mathrm{OL}}=8 \mathrm{~mA} @ 3.3 \mathrm{~V}$
$\mathrm{I}_{\mathrm{OH}} / \mathrm{l}_{\mathrm{OL}}=16 \mathrm{~mA} @ 5.0 \mathrm{~V}$
- 3-Stage Divider

Maximum Divider $\mathrm{f}_{0} / 8$

- Oscillation Stop and Output Stand-by Function
- 3-State Output Buffer
- Oscillation Capacitors Cg and Cg on-Die

| Operating Temperature Range | Topr | -40 to +85 | ${ }^{\circ} \mathrm{C}$ |
| Storage Temperature Range | Tstg | -55 to +125 | ${ }^{\circ} \mathrm{C}$ |

Note2) If the supply voltage $\left(\mathrm{V}_{\mathrm{DD}}\right)$ is less than 7.0 V , the input voltage must not over the $\mathrm{V}_{\mathrm{DD}}$ level though 7.0 V is limit specified.
Note3) Decupling capacitor should be connected between $\mathrm{V}_{\mathrm{DD}}$ and $\mathrm{V}_{\mathrm{SS}}$ due to the stabilized operation for the circuit.
Note4) Power Dissipation is the maximum value of a package simple substance.
