SINGLE LOW VOLTAGE C-MOS POWER AMPLIFIER

■ GENERAL DESCRIPTION

The NJU7081 is a single C-MOS Power Amplifier which is available to operate with single power supply and low voltage.

The NJU7081 realizes nearly full-swing output with low voltage operation (2.4V). An output voltage is kept more than $V_{DD}-0.3V$ or less than $V_{SS}+0.3V$ when output current is 40mA, therefore it is suitable for an ear-set and a small size speaker driver of the battery operated audio items, especially cellular phone.
