

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

VOLTAGE CONVERTER

■ GENERAL DESCRIPTION

The NJU7662 is a voltage converter incorporated CR-oscillator, voltage-level-shifter and power-MOS, which generates a polarity-converted negative voltage or twofold voltage of an operating voltage ranging from +4.5 to +20.0V.

The application circuit of negative voltage converter requires only two capacitors, and positive twofold voltage converter requires two capacitors, two resistors and one diode as external components.

The oscillation frequency of the internal oscillator is 10kHz and the negative voltage converter (on no-load condition) achieves extremely high-efficiency voltage conversion rate of 99.9%.

■ FEATURES

- Polarity-converted Negative Voltage Output
- Twofold Positive Voltage Output
- Operating Voltage --- +4.5 to +20.0 V
- High-efficiency Voltage Conversion Rate -- 99.9%
(No-load, Negative Voltage Converter)
- High-efficiency Power Conversion Rate -- 96%
(Negative Voltage Converter)
- Cascade Connection Available
2N-1 times voltage outputs for negative voltage
2N times voltage outputs for positive voltage
- Few External Components
--- 2 Capacitors (Negative Voltage Converter)
--- 2 Capacitors, 2 Resistors and 1 Diode
(Positive Voltage Converter)
- Package Outline DIP/DMP 8
- C-MOS Technology

APPLICATION CIRCUITS

(1-1) NEGATIVE VOLTAGE OUTPUT

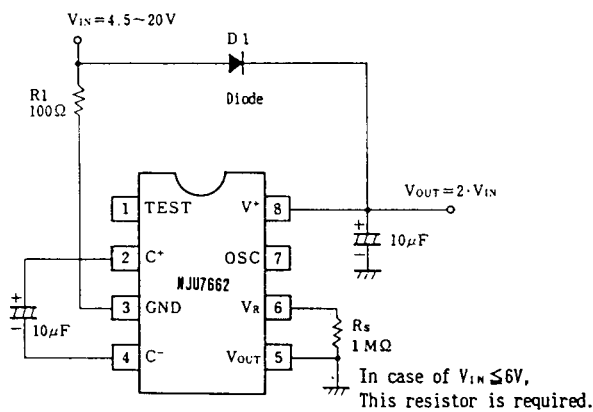

(1-2) NEGATIVE VOLTAGE OUTPUT

(*1) No. 6 Terminal must connect to GND or Open according to the operating voltage as follows;
 $V_+ < 6V$ --- Connect to GND
 $V_+ \geq 6V$ --- OPEN

(2) TWOFOLD VOLTAGE OUTPUT

In the twofold voltage application, R_1 , R_s and D_1 are required for start-up.
