

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Safety Modules

Safety Gate and Safety Magnetic Sensor

Types NSO02D, NSO13D

CARLO GAVAZZI

Screw, fixed

Screw, detachable

- Safety Category 4, Performance Level e, according to EN 13849-1
- Safety Category 4 according to EN 954-1
- Category 0 Emergency Stop (EN 60204-1)
- Input type: 2 NO
- 2 x 6 A NO safety outputs (NSO02D)
- 3 x 6 A NO safety outputs and 1 x 6 A NC auxiliary output (NSO13D)
- Automatic / manual or monitored manual reset
- Single / double channel operations
- LED indication for outputs status and power supply ON
- Connection by fixed or detachable terminals
- For mounting on DIN-rail in accordance with DIN/EN 50 022
- 22.5 mm Euronorm housing

Product Description

Safety gate and safety magnetic sensor modules according to EN 60204-1, EN 292-1/-2, EN 418 and EN1088. This family of safety module in Safety Category 4,

Performance Level e, includes fixed screw and detachable screw as well as automatic/manual or monitored manual restart versions.

Mode of Operation

The safety modules NSO02D and NSO13D monitor both mechanical switches and safety magnetic sensors (2 NO contact outputs), according to 98/37/CE Machinery Directive. If the unit is correctly supplied and the input terminals are closed (i.e. safety gate closed), the module is enabled to close the safety outputs and the external contactors can be energized. When the input terminals are open (i.e. safety gate open) the module is not enabled to close the safety outputs and the external contactors can not be energized.

Automatic START

Provided that the terminals X1 and X2 (NSO02...A) or S33 and S34 (NSO13...A) are connected, the safety outputs close and the auxiliary output opens (NSO13...A) as soon as both S1 and S2 switches are closed. The relevant CH1 and CH2 LED turn on. Releasing even one input contact (S1 and/or S2) forces immediately the safety outputs to open and the auxiliary output (NSO13...A) to close. A new operating cycle is possible only after releasing both input contacts and then operating them again.

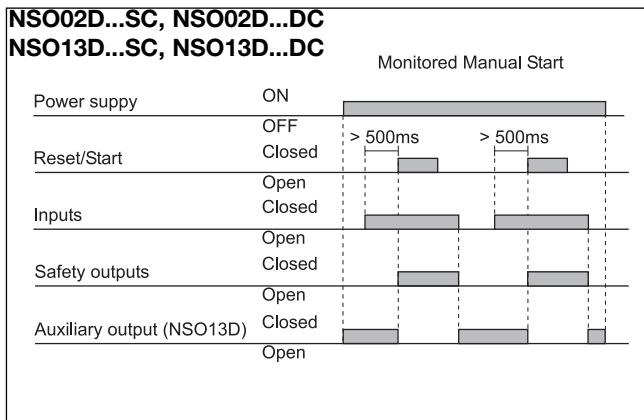

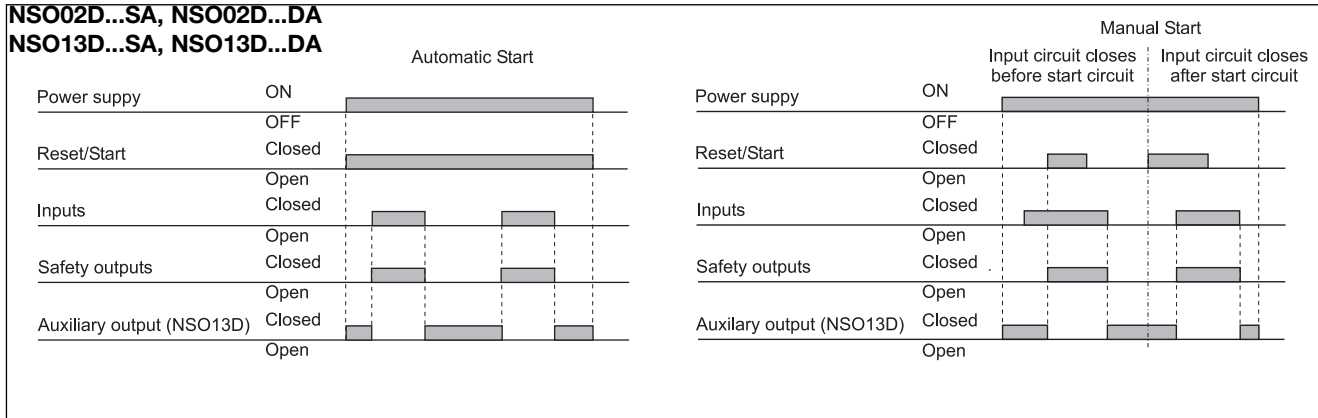

Manual START

Provided that both S1 and S2 switches are closed, the safety outputs close and the auxiliary output opens (NSO13...A) as soon as the NO START pushbutton is pushed [connecting X1 and X2 (NSO02...A) or S33 and S34 (NSO13...A)]. A new operating cycle is possible only after releasing both input contacts, closing them again and pushing the START button.

Monitored manual START

The monitored manual START versions (NSO...C) work as described in the previous paragraph (Manual START) except for a minimum delay of 500 ms from the closed status of the input contacts to the pushing of the START button. If the input terminals get closed with the START switch already closed, the safety outputs don't close and the auxiliary doesn't open (NSO13...C): it is necessary to release the START button and the input contacts before starting a new cycle, then operate the input contacts and finally, after at least 500 ms, operate the START button. So if the NO START button gets welded, the outputs don't close anymore.
