Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

NTHC5513

Power MOSFET
20 V, +3.9 A / –3.0 A, Complementary ChipFET™

Features

- Complementary N–Channel and P–Channel MOSFET
- Small Size, 40% Smaller than TSOP–6 Package
- Leadless SMD Package Featuring Complementary Pair
- ChipFET Package Provides Great Thermal Characteristics Similar to Larger Packages
- Low $R_{DS(on)}$ in a ChipFET Package for High Efficiency Performance
- Low Profile (< 1.10 mm) Allows Placement in Extremely Thin Environments Such as Portable Electronics
- These Devices are Pb–Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Load Switch Applications Requiring Level Shift
- DC–DC Conversion Circuits
- Drive Small Brushless DC Motors
- Designed for Power Management Applications in Portable, Battery Powered Products

BASIC PAD PATTERNS

The basic pad layout with dimensions is shown in Figure 22. This is sufficient for low power dissipation MOSFET applications, but power semiconductor performance requires a greater copper pad area, particularly for the drain leads.

The minimum recommended pad pattern shown in Figure 23 improves the thermal area of the drain connections (pins 5, 6, 7, 8) while remaining within the confines of the basic footprint. The drain copper area is 0.0019 sq. in. (or 1.22 sq. mm). This will assist the power dissipation path away from the device (through the copper lead−frame) and into the board and exterior chassis (if applicable) for the single device. The addition of a further copper area and/or the addition of vias to other board layers will enhance the performance still further.
