Chipsmall

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Dual QSFP28 100GBase-SR4 Optical Bypass Module

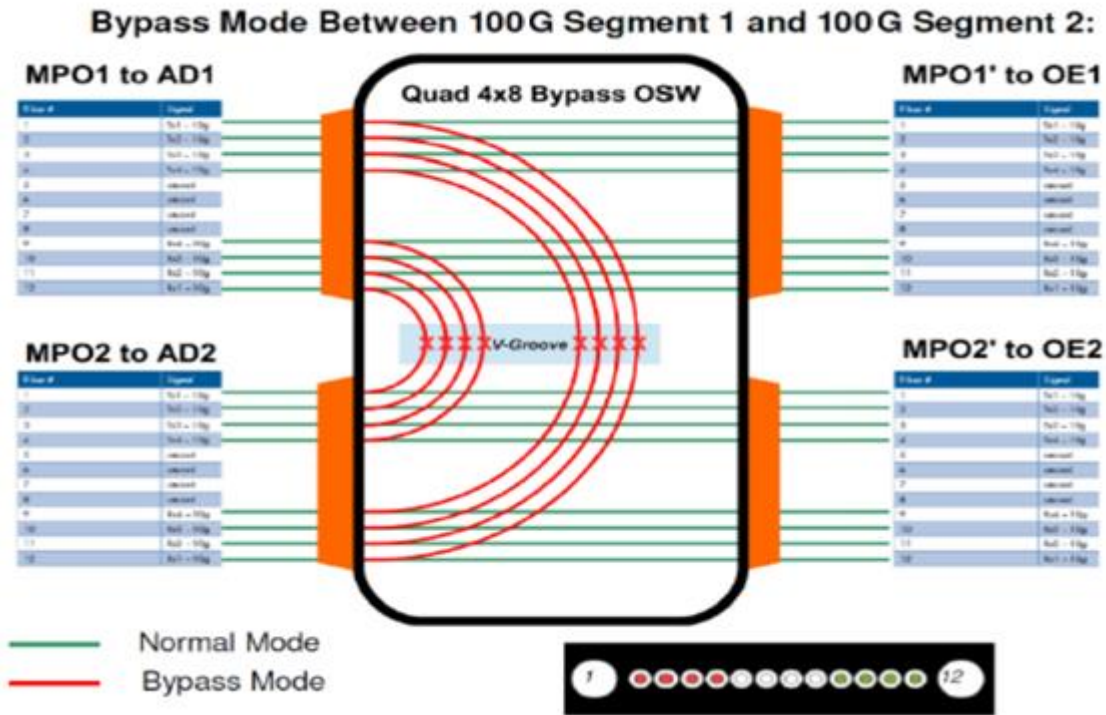

OBM – D3DH2 – F01

Product Overview

FormericaOE dual 100G (2*100G) QSFP28 Optical Bypass Module (OBM) is a compact box that contains two QSFP28 optical transceivers and optical switches control circuit board. It can be integrated with I/O ports controllers in a Network Interface Card (NIC). The FormericaOE dual QSFP28 OBM is targeted to inline network system that maintains network connectivity when power failure occurs or system fails, particularly for Data Centers that employ extensive QSFP28 for optical inter connects between servers and switches. FormericaOE Dual QSFP28 OBM supports normal and bypass modes, and can be controlled to perform the block mode. In normal mode, the ports are independent interfaces. In bypass mode, all packets received from one port are transmitted to the adjacent port. In block mode, the module blocks the route. FormericaOE Dual QSFP28 OBM can bypass or block its I/O ports on a host system failure, power off, or upon software request. It can be integrated with any brand of CPU controller. It is suitable for connecting with in-line equipment for power failure or system maintenance. When the in-line unit is not on or is in bypass mode, the relays within the OBM are set to bridge the optical signals directly through the optical switch, completely bypassing the in-line equipment. If the in-line equipment is operating normally, then it supplies power to the switch through a high speed connector PIN. Compact and competitive cost, this module provides excellent performance on your network.

Features

- Reliable Passive Fiber Bypass (Latching)
- Low Return Loss
- Available in 50/125μm Multi Mode Fiber
- PCB Mountable Type
- Fast Ethernet Standard Compliant
- Digital Diagnostic SFF-8472 Rev.10.2 Compliant
- SONET/SDH Standard Compliant
- Two MPO-MT Adapter
- Class 1 Laser Product Complies with EN 60825-1
- Compliant with CE& FCC Standard
- Compact Format and ROHS Compliant

Notes:

1. Internally AC coupled and terminated to 100Ohm differential load.

2. Pull up to Vcc on Host Board.

3. Internally AC coupled, but requies a 100Ohm differential termination at or internal to Serializer/Deserializer.

Note 1: GND is the symbol for signal and supply (power) common for the QSFP module. All are common within the QSFP+ module and all module voltages are referenced to this potential unless otherwise noted. Connect these directly to the host board signal-common ground plane.

Note 2: Vcc Rx, Vcc1 and Vcc Tx are the receiver and transmitter power supplies and shall be applied concurrently. Requirements defined for the host side of the Host Edge Card Connector are listed in Table . Recommended host board power supply filtering is shown in Figure . Vcc Rx Vcc1 and Vcc Tx may be internally connected within the QSFP+ module in any combination. The connector pins are each rated for a maximum current of 500 mA.
