

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of "Quality Parts,Customers Priority,Honest Operation,and Considerate Service",our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Address: A1208, Overseas Decoration Building, #122 Zhenhua RD., Futian, Shenzhen, China

FEATURES

- *Guaranteed* $25\mu\text{V}$ max. Offset Voltage
- *Guaranteed* $0.6\mu\text{V}/^\circ\text{C}$ max. Offset Voltage Drift with Temperature
- *Excellent* $1.0\mu\text{V}/\text{Month}$ max. Long Term Stability
- *Guaranteed* $0.6\mu\text{V}_{\text{p-p}}$ max. Noise
- *Guaranteed* 2.0nA max. Input Bias Current

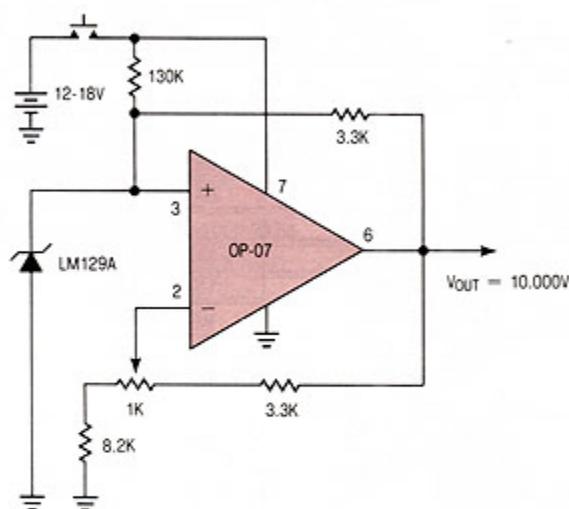

APPLICATIONS

- Thermocouple Amplifiers
- Strain Gauge Amplifiers
- Low Level Signal Processing
- Medical Instrumentation

DESCRIPTION

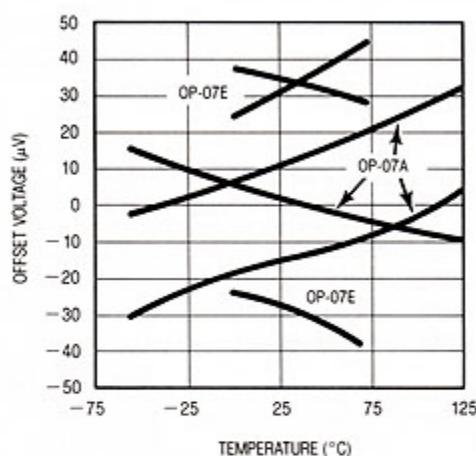

The OP-07 offers excellent performance in applications requiring low offset voltage, low drift with time and temperature and very low noise. Linear's OP-07 is interchangeable with many of the precision op-amp device types. The OP-07 also offers a wide input voltage range, high common mode rejection and low input bias current. These features result in optimum performance for small signal level and low frequency applications. Use of advanced design, processing and testing techniques make Linear's OP-07 a superior choice over similar products. A buffered reference application is shown below. For single op amp applications requiring higher performance, see the **LT1001** and for matched dual precision applications see the **LT1002**.

Precision Buffered Single Supply Reference

The OP-07 contributes less than 5% of the total drift with temperature, noise and long term drift of the reference application.

Offset Voltage Drift With Temperature
 Of Representative Units

ABSOLUTE MAXIMUM RATINGS

Supply Voltage..... ±22V
 Differential Input Voltage..... ±30V
 Input Voltage Equal to Supply Voltage
 Output Short Circuit Duration..... Indefinite
 Operating Temperature Range
 OP-07/OP-07A..... -55°C to 125°C
 OP-07E/OP-07C..... 0°C to 70°C
 Storage Temperature Range
 All Devices..... -65°C to 150°C
 Lead Temperature (Soldering, 10 sec.)..... 300°C

The ● denotes the specifications which apply over full operating temperature range.

For MIL-STD components, please refer to LTC 883C data sheet for test listing and parameters.

Note 1: Offset voltage for the OP-07A is measured 60 seconds after power is applied. All other grades are measured with high speed test equipment, approximately 1 second after power is applied.

Note 2: This parameter is tested on a sample basis only.

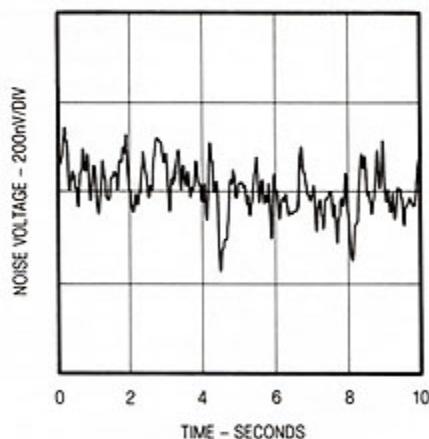

Note 3: Long term Input Offset Voltage Stability refers to the averaged trend line of V_{OS} versus Time over extended periods after the first 30 days of operation. Excluding the initial hour of operation, changes in V_{OS} during the first 30 operating days are typically $2.5\mu V$.

Note 4: This parameter is guaranteed by design.

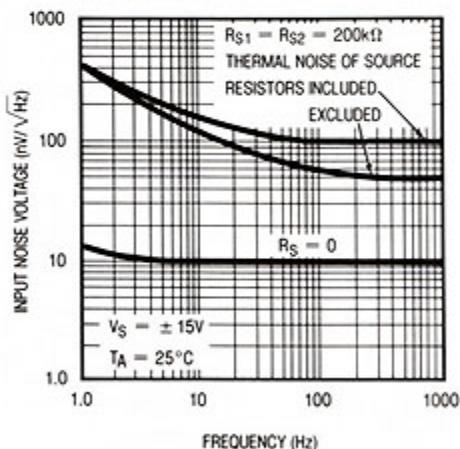

Note 5: The OP-07D is available by special request.

TEST CIRCUIT DIAGRAMS

Offset Voltage Test Circuit †

Offset Nulling and Low Frequency Noise Test Circuit

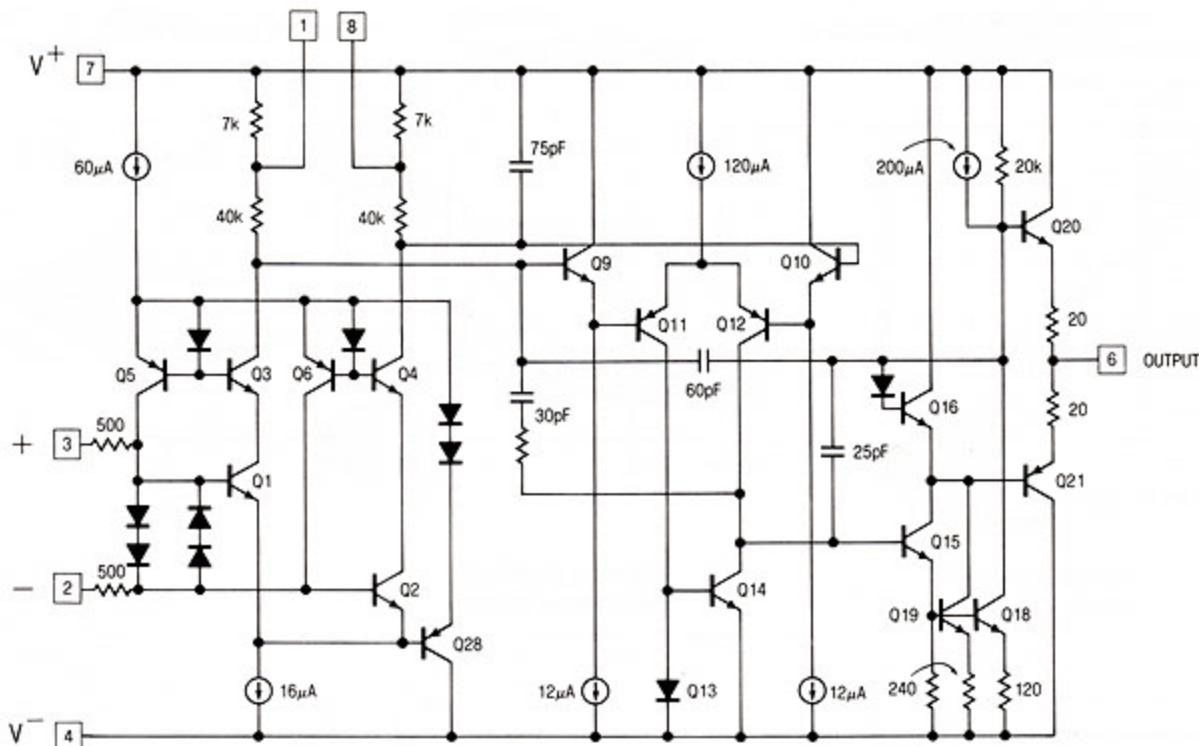

- NOTES:
- 1) RC APPROXIMATELY 10Hz FILTER
 - 2) OBSERVE OUTPUT FOR 10 SECONDS
 $A_V = 25000$

Application Tip:

When the OP-07 is used as a replacement in 725, 108/108A, 308/308A applications, removal of external compensation is optional. For conventionally nulled 741 type applications, external trimming should be removed. Care should be taken to avoid thermocouple voltages caused by temperature variations between the input terminals or dissimilar metals.

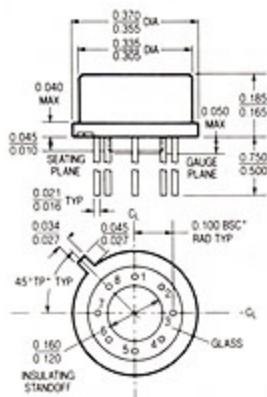

† This circuit is also used as the burn-in configuration with supply voltages changed to ±20 Volts.
