

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

Reflective Line Reader Sensor

Type OPB739RWZ

Features:

- Focused for maximum sensitivity
- Phototransistor Output
- 650nm Visible Red LED to optimize detection of dye based inks
- Low-cost plastic housing
- 24" minimum 26AWG wire leads
- Optimal operating distance range 0.015" [.38mm] to 0.045" [1.14mm]

Description:

The **OPB739RWZ** is a reflective line reader sensor. The sensor utilizes a visible red (650nm) LED and an NPN silicon phototransistor mounted side by side on converging optical axes in a black plastic housing. The converging light beam makes this sensor capable of detecting line widths as small as 0.004" [0.1mm] at the optimum distance of 0.030" [0.76mm] from the target. The red LED maximizes the reflected signal contrast of black lines on white backgrounds. Recommended line spacing is .050" minimum.

This sensor can be used with Optek's OCB100CZ auto calibration module to reduce variability from sensor to sensor and to achieve a digital output.

Custom electrical, wire, cabling and connectors are available. Contact your local representative or OPTEK for more information.

Applications:

- Line Reading
- Low Resolution Bar Code Sensing
- Paper edge detection
- Mark detection
- Reflective Optical Encoders

OPB739RWZ

DIMENSIONS ARE ±.005 [.12] UNLESS OTHERWISE SPECIFIED.

Notes:

1. "d" is the distance from the assembly's lens surface to the reflective surface.
2. Measured using 90% diffuse reflectance white test card as the reflecting surface.
3. Typical values by design. Rise and Fall times are not tested.
4. Methanol or Isopropanol are recommended as cleaning agents. Plastic housing is soluble in chlorinated hydrocarbons and ketones.
