

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

P1P40167

1.8V, 4-PLL Low Power Clock Generator with Spread Spectrum

Functional Description

The P1P40167 is a high precision frequency synthesizer designed to operate with a 27 MHz fundamental mode crystal. Device has 4 PLL's with four LVCMOS outputs and a reference clock. The frequencies generated are 22.5792 MHz, 24.576 MHz, 48 MHz and 37 MHz as well as a 27 MHz copy of the reference clock. Device offers flexible spread spectrum options configurable through I²C bus. All output clocks are generated with high precision, zero PPM frequency conversion, thus making it suitable for high-end multimedia and consumer applications. I²C is included to support various system configuration options.

Features

- Low Power Architecture to Support Portable Applications
- Integrated Loop Filter
- Input: 27 MHz Crystal or External Input
- Outputs:
 - ◆ 27 MHz Reference Output
 - ◆ Fixed Output Frequencies of 48 MHz and 22.5792 MHz
 - ◆ Configurable Spread Spectrum for 37 MHz Output
 - ◆ Selectable Audio Clock Frequency of Either 22.5792 MHz or 24.576 MHz
- LVCMOS Input and Outputs
- Supply Voltage: 1.8 V
- 16-pin QFN Package
- Operating Temperature Range: -10°C to +80°C
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Portable Gaming
- Audio/Video Multimedia

ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 7 of this data sheet.

P1P40167

Figure 2. Pin Configuration (Top View)

Table 1. PIN DESCRIPTION

Pin#	Pin Name	Type	Description
1	VDD	Power	1.8 V power supply for Core
2	VDD	Power	1.8 V power supply for Core
3	48M	Output	48 MHz clock output. Has internal pull down resistor.
4	VDD	Power	1.8 V power supply for Core
5	22M	Output	22.5792 MHz clock output. Has internal pull down resistor.
6	SCLK	Input	I ² C bus Clock input, internal pull-up resistor
7	SDATA	Input / Output	I ² C bus Data pin, Internal pull-up resistor
8	22/24M	Output	24.576 MHz or 22.5792 MHz clock output. Has internal pull down resistor.
9	VSS	Power	0 V device ground
10	VDDO	Power	1.8 V power supply for Output Clocks
11	37M	Output	37 MHz clock output. Has internal pull down resistor.
12	VDDO	Power	1.8 V power supply for Output Clocks
13	VSS	Power	0 V device ground
14	27M	Output	Buffered 27 MHz reference clock output. Has internal pull down resistor.
15	XOUT	Output	Crystal connection. If using an external reference, this pin must be left unconnected.
16	XIN	Input	Crystal connection. Connect to 27 MHz crystal or External clock input
-	EP	-	The Exposed Pad (EP) on the QFN-16 package bottom is thermally connected to the die for improved heat transfer out of package. The pad is electrically connected to the die, and can be electrically and thermally connected to device ground on the PC board.

P1P40167

EXTERNAL COMPONENTS

Decoupling Capacitor

As with any high-performance mixed-signal IC, the P1P40167 must be isolated from system power supply noise to perform optimally.

A decoupling capacitor of 0.1 μ F must be connected between each VDD and the PCB ground plane.

I²C External Resistor Connection

The SCLK and SDATA pins can be connected to any voltage between 1.8 V and 2.0 V.

Crystal Load Capacitors

No external crystal load capacitors are required. To save discrete component cost, the P1P40167 integrates on-chip capacitance to support a crystal with $C_L = 10.5$ pF. It is important to keep stray capacitance to a minimum by using very short PCB traces (and no vias) between the crystal and device.

Table 2. ABSOLUTE MAXIMUM RATING

Symbol	Parameter	Rating	Unit	
VDD / VDDO	Supply Voltage	-0.5 to 3.6	V	
V _{IN}	All Inputs	-0.5 to (VDD + 0.5)	V	
V _{OUT}	All Outputs	-0.5 to (VDDO + 0.5)	V	
T _A	Storage Temperature	-65 to +150	°C	
T _J	Junction Temperature	125	°C	
T _S	Soldering Temperature	260	°C	
T _{DV}	Static Discharge Voltage (As per JEDEC STD22-A114-B)	Human Body Model	2000	V
		Machine Model	200	
θ_{JA}	Thermal Resistance (Junction-to-Ambient)	0 lpfm	42	°C/W
		500 lpfm	35	
θ_{JC}	Thermal Resistance (Junction-to-Case) (Note 1)	4.0	°C/W	
MSL	Moisture Sensitivity Level	1		

Stresses exceeding Maximum Ratings may damage the device. Maximum Ratings are stress ratings only. Functional operation above the Recommended Operating Conditions is not implied. Extended exposure to stresses above the Recommended Operating Conditions may affect device reliability.

1. JEDEC standard multilayer board – 2S2P (2 signal, 2 power) with 8 filled thermal vias under exposed pad.

Table 3. RECOMMENDED OPERATING CONDITIONS

Symbol	Description	Min	Typ	Max	Unit
VDDO	Operating Supply Voltage (Output Clocks)	1.7	1.8	2.0	V
VDD	Operating Supply Voltage (Core)	1.7	1.8	2.0	V
T _A	Ambient Operating Temperature	-10		+80	°C

P1P40167

Table 4. DC ELECTRICAL CHARACTERISTICS

Unless stated otherwise, VDD/VDDO = 1.8 V – 0.1 V/+0.2 V, T_A = –10°C to +80°C

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
VDD / VDDO	Supply Voltage		1.7		2.0	V
I _{DD}	Power Supply Current	No Load, VDD, VDDO = 1.8 V, All output clocks running and spread ON		10	12	mA
V _{IH}	Input High Voltage		0.7 x VDD			V
V _{IL}	Input Low Voltage				0.3 x VDD	V
V _{OH}	Output High Voltage	I _{OH} = –2 mA	0.8 x VDDO			V
V _{OL}	Output Low Voltage	I _{OL} = 2 mA			0.2 x VDDO	V
C _{IN}	Input Capacitance	Except XIN, XOUT pins		5		pF
C _{LOAD}	Xtal Load Capacitance	XIN, XOUT		10.5		pF
R _{PU}	Internal Pull-up Resistor	SCLK, SDATA Pins	100	500		kΩ
R _{PD}	Internal Pull-down Resistor	22M, 22/24M, 27M, 37M, 48M	75	250		kΩ

Table 5. AC ELECTRICAL CHARACTERISTICS (Note 2)

(Unless stated otherwise, VDD/VDDO = 1.8 V –0.1 V/+0.2 V, C_L = 5 pF, T_A = –10°C to +80°C)

Symbol	Parameter	Conditions	Min	Typ	Max	Unit
F _{in}	Input Frequency			27		MHz
T _F / T _R	Output Rise / Fall Time	Measured between 20% and 80%	1.1	1.8	3.3	ns
R _O	Output Impedance	VO = VDDO /2		104		Ω
T _{DC27}	Output Clock Duty Cycle	27 MHz output @VDDO/2	45	50	55	%
T _{DC}		37 MHz, 48 MHz, 22/24 MHz and 22.5792 MHz clocks @ VDDO/2	45	50	55	%
	Freq Synthesis Error	All Outputs		0		ppm
T _{PJ}	Absolute Clock Period Jitter			±225	±400	ps
T _{CCJ}	Cycle to Cycle Jitter			225	375	ps
T _{LTJ1}	Long Term Jitter	27 MHz, n = 1000			750	ps
T _{LTJ2}		48 MHz, n = 1000			750	ps
T _{LTJ3}		22 MHz and 22/24MHz, n=1000			1500	ps
T _{LTJ4}		37 MHz with SSOFF n = 20, sample count = 3k		550	750	ps
T _{WAIT}	22/24M Clock Switching Time	Finish from prior cycle to start of new cycle			15	μs
T _{PU}	Power-up Time	From minimum VDD to outputs stable		1.5	4.0	ms
t _{OEN}	Output Enable Time	Measured from rising edge of last I ² C clock			20	μs
		22/24M, Measured from rising edge of last I ² C clock			150	μs
		37M, Measured from rising edge of last I ² C clock			1.5	ms
t _{OEZ}	Output Disable Time	Measured from rising edge of last I ² C clock			20	μs
	Crystal Power			200		μW

2. Guaranteed by design, not tested in production.

SERIAL DATA INTERFACE

Data Protocol

The Clock Driver serial protocol accepts byte write, byte read, block write, and block read operations from the Controller. For Block write/read operation, the bytes must be accessed in sequential order from lowest to highest byte (most significant bit first) with the ability to stop after any

complete byte has been transferred. For byte write and byte read operations, the system controller can access individually indexed bytes. The offset of the indexed byte is encoded in the command code as described in the following table.

Bit	Description
7	0= Block read or Block write operation, 1= Byte read or byte write operation
(6:0)	Byte offset for byte read or byte write operation. For Block read or Block write operations, these bits should be '0000000'.

The Block write and Block read protocol is outlined in the table below, followed by the corresponding byte write and byte read protocol. The slave receiver address is 11010010 (D2h).

Block Write Protocol		Block Read Protocol
