

Chipsmall Limited consists of a professional team with an average of over 10 year of expertise in the distribution of electronic components. Based in Hongkong, we have already established firm and mutual-benefit business relationships with customers from,Europe,America and south Asia,supplying obsolete and hard-to-find components to meet their specific needs.

With the principle of “Quality Parts,Customers Priority,Honest Operation,and Considerate Service”,our business mainly focus on the distribution of electronic components. Line cards we deal with include Microchip,ALPS,ROHM,Xilinx,Pulse,ON,Everlight and Freescale. Main products comprise IC,Modules,Potentiometer,IC Socket,Relay,Connector.Our parts cover such applications as commercial,industrial, and automotives areas.

We are looking forward to setting up business relationship with you and hope to provide you with the best service and solution. Let us make a better world for our industry!

## Spread Spectrum Clock Generator

### Product Description

The PCS3P25811/12/14 devices are versatile spread spectrum frequency modulators designed specifically for a wide range of input clock frequencies from 4 MHz to 32 MHz.

The PCS3P25811/12/14 reduce electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of down stream clock and data dependent signals. It allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding, and other passive components that are traditionally required to pass EMI regulations.

The PCS3P25811/12/14 can generate an EMI reduced clock from crystal, ceramic resonator, or system clock.

The PCS3P25811/12/14 modulate the output of a single PLL in order to “spread” the bandwidth of a synthesized clock, and more importantly, decreases the peak amplitudes of its harmonics. This results in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal’s bandwidth is called ‘spread spectrum clock generation’.

The PCS3P25811/12/14 use the most efficient and optimized modulation profile approved by the FCC and is implemented in a proprietary all-digital method.

The PCS3P25811/12/14 have 2 pins S0 and S1 to control the selection of Center Spread, Down Spread and No-Spread functions. Additionally there is a 3 level logic control FSEL, for selecting one of the three different frequency ranges within the operating frequency range. Refer *Input/Output Frequency Range Selection Table*.

The PCS3P25811/12/14 operate from a 2.8 V to 3.6 V supply and are available in 8 pin SOIC, and 8L 2 mm x 2 mm WDFN packages.

### Applications

The PCS3P25811/12/14 are targeted towards EMI management in applications such as LCD Panels, MFPs, Digital copiers, Networking, PC peripheral devices, consumer electronics, and embedded controller systems.

### Features

- Generates a 1x (PCS3P25811), 2x (PCS3P25812) and 4x (PCS3P25814) Low EMI Spread Spectrum Clock of the Input Frequency
- Provides up to 15 dB of EMI Suppression
- Input Frequency: 4 MHz – 32 MHz
- Output Frequency: PCS3P25811: 4 MHz – 32 MHz  
PCS3P25812: 8 MHz – 64 MHz  
PCS3P25814: 16 MHz – 128 MHz

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 9 of this data sheet.

- Selectable Spread Options: Down Spread and Center Spread
- Low Power Dissipation: 3.3 V: 20 mW (typ) @ 6 MHz  
3.3 V: 24 mW (typ) @ 12 MHz  
3.3 V: 30 mW (typ) @ 24 MHz
- Low Inherent Cycle-to-Cycle Jitter
- Supply Voltage: 2.8 V to 3.6 V
- LVCMOS Input and Output
- Functional and Pinout Compatible to Cypress CY25811, CY25812 and CY25814
- 8-pin SOIC, and 8L 2 mm x 2 mm WDFN (TDFN) Packages
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

**3 Level Digital Logic**

S0, S1, and FSEL digital inputs are designed to sense 3 different logic levels designated as High “1”, Low “0” and Middle “M”. With this 3–Level digital input logic 9 different logic states can be detected.

S0, S1 and FSEL pins include an on chip 100 K (50 K / 50 K) resistor divider. No external application resistors are needed to implement the 3–Level logic levels as shown in table on the right:
